Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Equipment failure, Inadequate planning	3H	<ul style="list-style-type: none"> - Conduct pre-operational checks on crane - Ensure operators have up-to-date qualifications - Utilise detailed lift plans - Ensure communication devices are functional - Review recent incidents involving similar equipment - Ensure weather conditions are suitable for operation - Verify load weights within crane capacity - Ensure work area access and egress is clear - Conduct site walk-around to identify potential hazards - Include adequate rest periods in work schedule 	2M
2. Site Inspection	Unstable ground conditions, Hidden obstacles	4H	<ul style="list-style-type: none"> - Conduct thorough ground stability assessment - Use industrial-strength lighting for inspections - Mark uneven areas - Fill or flatten dips and holes - Identify and mitigate risk from nearby underground services - Designate and cordon off hazardous zones - Train spotters to identify and communicate hidden hazards - Record all identified hazards for reference - Pre-approve ground for stability by qualified engineer - Verify no recent site changes that could affect crane stability 	3H
3. Crane Setup	Incorrect setup, Inadequate stabilisation	4A	<ul style="list-style-type: none"> - Follow manufacturer guidelines for crane setup - Use outrigger pads or cribbing as necessary - Utilise levelling devices for precision setup - Have setup inspected by a secondary qualified operator - Use visual aids for correct orientation - Verify wind conditions are within operational limits - Set up reflective barriers around crane area - Ensure all pins and locks are secure 	2M
