Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
Consequence Scale:								4. Engineering	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation		5. Administrative		
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution		6. PPE		
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage		Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.		
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment		<i>aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.</i>		
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	lack of safety training, inadequate PPE	3H	<ul style="list-style-type: none"> - Ensure all workers receive safety training relevant to hydraulic press - Provide adequate PPE such as eye protection and gloves - Verify understanding through safety briefings - Sign off competency for new operators - Regularly review safety procedures with team - Ensure PPE is available in various sizes for all workers - Confirm PPE compliance before work begins - Display safety signage prominently - Schedule regular refresher courses for operators - Provide easy access to safety documents 	2M
2. Inspect Equipment	equipment malfunction, missing safety guards	3H	<ul style="list-style-type: none"> - Conduct pre-operation inspection - Check hydraulic press for visible wear and tear - Ensure safety guards are in place and functional - Document and report any equipment discrepancies - Schedule regular maintenance checks - Use fault logs to track repeated issues - Verify calibration of press settings before use - Replace damaged parts immediately - Utilise lockout/tagout procedures during maintenance - Maintain a supply of spare parts on-site 	2M
3. Set Up Materials	lifting heavy materials, incorrect positioning	4A	<ul style="list-style-type: none"> - Implement manual handling training - Use mechanical aids where possible - Position materials correctly using guides - Clearly label correct material placements - Use team lifts when necessary - Ensure clear walkways and surroundings - Train workers on correct posture and lifting techniques - Provide adjustable workstations 	2M
