UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard	
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records.	Administrative Change	
								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site				
								aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.

1. Dive Team Briefing	Inadequate information exchange, Overlooked diver limitations	3H	<ul style="list-style-type: none"> - Conduct a comprehensive briefing outlining objectives and procedures - Ensure divers disclose any limitations or health issues - Use a checklist to ensure all topics are covered during briefing - Assign roles and responsibilities clearly among team members - Encourage questions and discussion to confirm understanding - Verify that all safety regulations and emergency procedures are understood - Provide a dive site map and go over search patterns - Make sure communication devices are functional and distribute them as needed - Plan for weather and environmental changes and discuss contingency plans - Confirm quick exit for communication gear 	1L
2. Equipment Check	Faulty equipment, Incorrect equipment selection	3H	<ul style="list-style-type: none"> - Perform a detailed inspection of all diving equipment before use - Ensure all equipment matches the specifications for the planned dive - Check supply levels and ensure tanks are full - Test regulators and buoyancy control devices thoroughly - Inspect wetsuits, masks, fins, and gloves for damage - Reevaluate the personal equipment for compatibility and function - Ensure all gear is correctly fitted to individual divers - Verify calibration of underwater compasses and navigation aids - Match equipment to the diver's skill level and experience - Maintain a log of all equipment checks and issues 	2M
3. Site Assessment	Environmental hazards, Visibility issues	4A	<ul style="list-style-type: none"> - Conduct a visual inspection of the site from a safe vantage point - Gather up-to-date meteorological and oceanographic data - Assess water conditions, including currents, tides and visibility - Identify and communicate known environmental hazards e.g. dangerous marine life - Avoid diving in areas with heavy boat traffic - Ensure that emergency exit points are known and accessible - Determine the impact of weather conditions on the site - Postpone diving operations if conditions are deemed unsafe 	2M
