Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	improper planning, unawareness of weather conditions	3H	<ul style="list-style-type: none"> - Conduct a site assessment - Review weather forecasts - Prepare an action plan - Communicate the plan to all workers - Ensure workers are trained on securing items - Obtain necessary securing equipment - Schedule tasks for weather windows - Establish emergency procedures - Identify potential hazards in advance - Assign personnel for weather monitoring 	2M
2. Tool Inspection	using faulty equipment, inadequate securing tools	3H	<ul style="list-style-type: none"> - Inspect all tools and equipment for damage - Use only approved, functional securing tools - Regularly maintain securing tools - Replace damaged equipment - Train workers on proper tool use - Ensure availability of backup tools - Use rated ropes and straps - Implement tool inventory checklist - Conduct scheduled inspection routines - Label and store tools properly 	1L
3. Securing Large Objects	improper securing leads to projectiles, objects toppling over	4A	<ul style="list-style-type: none"> - Use heavy-duty straps and anchors - Employ additional manpower - Follow manufacturer's securing guidelines - Double-check securing points - Implement redundant securing systems - Use sandbags or weights if necessary - Document the securing method used - Conduct a final inspection by a supervisor 	2M
