Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slips on oil residue, Trip hazards from cables	3H	<ul style="list-style-type: none"> - Conduct pre-work briefing to acknowledge potential hazards - Deploy safety cones around oil-spill areas - Ensure cables are tucked away or secured to minimise trips - Regularly mop any spills encountered - Use slip-resistant footwear - Ensure all team members are aware of potential hazards - Maintain clear walkways - Place warning signage in high-risk areas - Perform hazard inspections before starting work - Document identified hazards in log 	2M
2. Motor Inspection	Electric shock from live wires, Hearing damage from loud noise	3H	<ul style="list-style-type: none"> - De-energise motors before inspection - Use voltage-safe tools and equipment - Wear hearing protection in high-noise areas - Verify de-energisation with danger tags - Implement lockout/tagout procedures - Train staff in safe inspection protocols - Regularly maintain equipment to prevent electrical faults - Ensure proper labelling of electrical components - Implement quiet hour inspections for minimal interference - Use insulated gloves 	1L
3. Motor Cleaning	Chemical exposure to cleaners, Slip hazards from cleaning agents	2M	<ul style="list-style-type: none"> - Use personal protective equipment (PPE) including gloves and masks - Ensure adequate ventilation when using chemicals - Use spill mats to prevent chemical spread - Store chemicals in labelled containers - Provide training on safe chemical handling - Implement a cleaning schedule to avoid overuse - Utilise non-slip mats - Have material safety data sheets (MSDS) accessible 	1L
