Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slippery surfaces, Unsecured tools	3H	<ul style="list-style-type: none"> - Conduct site inspection to identify potential hazards - Ensure all necessary permits are obtained - Set up safety signs to warn about slippery areas - Secure all tools in a designated area to prevent tripping - Brief team on potential hazards and safety protocols - Wear appropriate PPE such as gloves and non-slip shoes - Test equipment to ensure proper functioning before use - Ensure adequate lighting in the work area - Assign roles and responsibilities to team members - Keep work area clear of unnecessary items 	2M
2. Accessing Work Area	Trips and falls, Unauthorized access	3H	<ul style="list-style-type: none"> - Use secured ladders and platforms with handrails - Ensure ladder placement on stable ground only - Limit access to work area to authorised personnel - Use high-visibility barriers to cordon off working area - Brief all personnel on safe access routes - Regularly check stability of access equipment - Have a spotter to guide and assist workers accessing high areas - Ensure area is clear of obstacles before accessing - Do not work alone – have a buddy system in place - Conduct access checks at regular intervals 	2M
3. Isolating Water Supply	Water leaks, Pressure build-up	3H	<ul style="list-style-type: none"> - Identify main water supply valve location - Ensure proper signage indicating water isolation - Gradually shut off valves to relieve pressure - Use appropriate tools to adjust and secure valves - Verify the isolation by checking water flow - Communicate with team once isolation is confirmed - Inspect piping for existing leaks before starting - Plan isolation in phases to manage pressure 	2M
