Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Site Inspection	loose debris, uneven flooring	3H	<ul style="list-style-type: none"> - Conduct a thorough site inspection before commencing work - Remove any loose debris from the site - Ensure that all flooring is even and free from trip hazards - Use appropriate caution signage to mark any hazards - Limit access to areas undergoing work until hazards are mitigated - Train workers on hazard identification and safety protocols - Review site-specific safety procedures - Maintain a clean and organised workspace - Ensure proper footwear worn by all personnel - Document all findings and actions taken 	2M
2. Equipment Check	equipment malfunction, incorrect calibration	3H	<ul style="list-style-type: none"> - Conduct pre-use equipment checks to ensure proper functioning - Verify calibration settings of all measurement tools - Implement a regular maintenance schedule for equipment - Use only equipment that has been recently serviced and certified - Train workers on equipment calibration and use - Cross-verify readings from different measurement tools - Ensure proper documentation of all equipment checks - Report and tag out any faulty equipment immediately - Provide workers with a checklist for equipment verification - Ensure availability of backup equipment 	1L
3. Site Preparation	obstructed access, inadequate lighting	3H	<ul style="list-style-type: none"> - Ensure all pathways to the workspace are clear and unobstructed - Conduct a lighting assessment to ensure adequate visibility - Set up temporary lighting where necessary - Monitor light levels during different parts of the day - Install warning signs in poorly lit areas - Inform all personnel of the site layout and access points - Position emergency exits and signs clearly - Use high-visibility clothing for workers 	2M
