Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Lifting strain, Chemical exposure	3H	<ul style="list-style-type: none"> - Conduct manual handling training for all workers - Use personal protective equipment (PPE) like gloves and goggles - Ensure availability of lifting equipment if necessary - Limit weight of items to be transported - Pre-plan storage locations to minimize lifting distance - Provide safety data sheets for chemicals involved - Regularly inspect for PPE damage - Perform a risk assessment prior to work - Provide spill kit and training in their use - Ensure good ventilation when handling chemicals 	2M
2. Isolation of Area	Unauthorised access, Slips and trips	3M	<ul style="list-style-type: none"> - Erect barriers and signage to prevent access - Use caution tape around the perimeter - Ensure all workers are briefed on site layout - Regularly inspect barriers for effectiveness - Provide hazard awareness training - Implement a log entry and exit register - Use high-visibility clothing for all personnel on site - Maintain communication with all workers on site - Place warning signs in visible areas - Keep area tidy and free of trip hazards 	2M
3. Initial Inspection	Structural instability, Biological hazards	4A	<ul style="list-style-type: none"> - Conduct inspection with qualified structural engineer - Use PPE including face mask and eye protection - Identify and mark unsafe areas to avoid - Collaborate with local authorities when structural issues are detected - Monitor structural integrity throughout the project - Dispose of biological contaminants safely - Deploy trained personnel for detection of biological hazards - Provide tetanus vaccinations to workers 	2M
