Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before the task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Unclear site plan, Inadequate PPE	4A	<ul style="list-style-type: none"> - Ensure clear and detailed site plans are available and communicated - Conduct site safety induction for all personnel - Confirm PPE requirements and distribute accordingly - Review contractor qualifications and competence - Hold a pre-start meeting to discuss potential site specific hazards - Ensure site is equipped with first aid facilities - Identify and locate underground services - Secure work area with appropriate fencing - Appoint a safety officer on site - Assess weather conditions and adjust work schedule if necessary 	2M
2. Site Clearance	Presence of hazardous materials, Unstable ground	4H	<ul style="list-style-type: none"> - Conduct a hazardous materials survey and remove any asbestos or lead - Engage professional service for hazardous materials removal - Stabilise ground using compactors where necessary - Designate and cordon off exclusion zones - Use visual signs to indicate presence of hazards - Wear respirators and appropriate PPE during clearance - Communicate site condition changes to all workers - Use spotters while clearing site - Regularly inspect scaffolding and support structures - Ensure adequate lighting for clear visibility 	2M
3. Excavation Marking	Incorrect measurements, Contact with utilities	3H	<ul style="list-style-type: none"> - Verify site plans and dimensions before marking - Use the latest calibrated measuring equipment - Engage a licensed surveyor for accurate site marking - Clearly mark and communicate the excavation areas - Identify and locate all utilities through service maps - Use utility locating tools to confirm utility absence - Confirm all utilities are marked on ground clearly - Maintain communication with utility companies 	1L
