POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE			Isolation Isolate People from the hazard	
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE			Engineering Isolate the hazard	
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH			Administrative Change	
						1L LOW	Monitor and keep records.	PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before the task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation		aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.		
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	poor planning, lack of training	3H	<ul style="list-style-type: none"> - Ensure training for all personnel on task lighting requirements - Develop a detailed task lighting management plan - Conduct a site-specific risk assessment - Provide clear communication of the plan to all workers - Ensure availability of necessary equipment and resources - Regular review and update of the lighting management plan - Supervision to ensure adherence to the plan - Schedule tasks during well-luminated periods where possible - Obtain input from staff regarding lighting concerns - Set up feedback system for ongoing improvement 	2M
2. Assessment of Lighting Requirements	inadequate lighting, glare	3H	<ul style="list-style-type: none"> - Conduct a light level survey using a lux meter - Consult standards to determine adequate lighting levels - Identify areas needing additional lighting - Engage lighting experts for quality advice - Consider the nature of tasks for specific lighting needs - Regular maintenance checks on lighting equipment - Implement lighting solutions that reduce glare - Train workers on identifying insufficient lighting - Use adjustable lighting to cater to different tasks - Mark areas with visual indicators needing improved lighting 	2M
3. Selection of Lighting Equipment	equipment failure, improper installation	3H	<ul style="list-style-type: none"> - Choose lighting equipment that meets industry standards - Regularly service and maintain lighting equipment - Consult professionals for proper installation - Verify compatibility with existing systems - Provide training for handling lighting equipment - Rotate stock to ensure equipment lifespan is maximised - Use equipment with backup power options - Include protective measures for sensitive equipment 	1L
