Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before the task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Inadequate training, Equipment failure	3H	<ul style="list-style-type: none"> - Ensure all workers receive proper training on tie-back systems - Conduct equipment checks before use - Plan the layout and sequence of operations beforehand - Provide clear communication on job responsibilities - Review site safety procedures - Verify the integrity of all tools and equipment used - Conduct pre-start safety meeting - Ensure availability of personal protective equipment (PPE) - Certify workers with specific tie-back installation training - Ensure supervisor oversight at all stages of the process 	2M
2. Site Inspection	Unstable ground, Obstructions	3H	<ul style="list-style-type: none"> - Perform a detailed terrain stability analysis - Mark out any potential obstructions clearly - Consult the plans to avoid unexpected encounters - Maintain constant radio communication during inspection - Secure loose materials before commencing work - Always ensure ground condition is fit for load - Use qualified personnel for site analysis - Coordinate with site manager for unfamiliar hazards - Implement barricades for site safety - Post warning signage around hazardous locations 	2M
3. Equipment Delivery	Transportation accidents, Heavy lifting	3H	<ul style="list-style-type: none"> - Use licensed transport operators - Schedule deliveries during low traffic times - Implement an escort vehicle for oversized loads - Utilize proper lifting techniques and tools - Employ mechanical aids where possible - Train workers on manual handling and lifting techniques - Follow a pre-defined delivery route - Conduct lift assessments prior to moving heavy equipment 	1L
