Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Slipping hazard from oil spills, Incorrect manual handling techniques	3H	<ul style="list-style-type: none"> - Use anti-slip mats to cover the work area - Ensure proper training on manual handling is provided - Conduct a preliminary inspection for any oil spills and clean immediately - Display clear warning signs - Use appropriate footwear with non-slip soles. - Allocate specific walkways for personnel. - Provide manual handling training and guidelines - Use spill containment kits as needed - Maintain an up-to-date incident reporting log. - Ensure the work area is well-lit. 	2M
2. Securing Vehicle	Vehicle roll stability issues, Falling objects	4H	<ul style="list-style-type: none"> - Chock wheels before starting work - Use vehicle jacks as per manufacturer instructions - Regularly inspect and maintain jacks for defects - Secure loads with additional supports - Ensure balanced load placement - Use safety gear such as helmets for head protection. - Place secure guardrails around the vehicle. - Conduct a pre-operational briefing. - Limit personnel to critical staff only. - Ensure the ground is stable and even. 	2M
3. Positioning Transmission Jack	Jack collapsing, Improper alignment	4A	<ul style="list-style-type: none"> - Inspect jack before each use - Lubricate parts to ensure smooth movement - Train workers on proper alignment techniques - Use mechanical aids for positioning - Ensure compliance with safety standards - Regularly schedule maintenance of jacks. - Use alignment markers for precision. - Employ a spotter to guide during positioning. 	2M
