Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Site Assessment	Poor visibility, Unidentified underwater obstacles	3H	<ul style="list-style-type: none"> - Conduct a comprehensive site survey beforehand - Use sonar scanning to identify obstacles - Implement a system for marking known hazards underwater - Ensure divers are equipped with high-lumen lights - Train operators in interpreting sonar data - Establish a communication protocol between divers and crane operators - Schedule operations during favorable weather conditions - Perform regular equipment maintenance checks - Document and communicate identified risks to the team - Limit non-essential personnel access to the site 	2M
2. Equipment Inspection	Equipment malfunction, Improper calibration	3H	<ul style="list-style-type: none"> - Conduct pre-operation equipment check by qualified personnel - Follow manufacturer's maintenance schedule - Verify crane controls are functioning correctly - Ensure all calibration settings match site requirements - Utilize checklists for thorough inspections - Replace defective parts immediately - Train staff on proper inspection techniques - Conduct documented load tests - Implement a reporting process for equipment faults - Store equipment manuals on-site 	2M
3. Environmental Monitoring	Adverse weather conditions, Tidal changes	3H	<ul style="list-style-type: none"> - Establish a weather monitoring system - Schedule operations during periods of stable weather - Monitor tide charts closely - Implement an emergency shutdown procedure for sudden weather changes - Use real-time data tools for updated environmental conditions - Train crew on interpreting environmental data - Conduct regular training on emergency procedures - Communication of updates to all team members 	2M

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.
