Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Inadequate planning, Lack of communication	3H	<ul style="list-style-type: none"> - Develop a detailed unloading plan with step-by-step instructions - Conduct a pre-task briefing with all workers involved - Ensure communication devices are available and in good working condition - Assign a competent supervisor to oversee the operation - Verify that all personnel are familiar with the plan and their roles - Schedule the task to minimise disruption and avoid peak operational times - Have emergency contact and procedures readily available - Consider weather conditions and plan accordingly - Obtain necessary permits and approvals - Ensure all personnel are inducted and trained for the task 	2M
2. Inspect Area and Equipment	Faulty equipment, Unsafe environment	3H	<ul style="list-style-type: none"> - Conduct a visual inspection of the unloading area - Check the condition of equipment such as cranes and forklifts - Ensure equipment is regularly maintained and serviced - Verify load ratings and safety certification of lifting gear - Ensure the ground is stable and able to support equipment - Remove any potential obstructions from the area - Confirm the area is well-lit and secure - Conduct a site-specific hazard analysis - Have a qualified person test equipment functionality - Conduct daily pre-start checks on all equipment 	2M
3. Secure Work Area	Unauthorised access, Slips, trips, falls	3H	<ul style="list-style-type: none"> - Install barriers and signage to restrict access - Use high-visibility tape to demarcate the work zone - Ensure walkways are clear of obstruction - Provide adequate illumination for the entire work area - Use slip-resistant mats where necessary - Brief all personnel on area restrictions - Erect temporary fencing if required - Use spotters to monitor zone boundaries 	2M
