THIS RISK ASSESSMENT IS APPROVED BY THE PCBU ON THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a RISK ASSESSMENT is prepared before the proposed work starts.

								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A		Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.						Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H		Review and approve additional controls before the task starts. Senior supervisor sign-off needed.						1. Eliminate	
2M		Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.						2. Substitute	
1L		Proceed, following standard operating procedures. Monitor and keep records.						3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site				
								aligned with Safe Work Australia's Managing the risk of fatigue at work (2023) and ISO 45001:2018 clauses 6–8.

1. Preparation	Inadequate training, Lack of PPE	3H	<ul style="list-style-type: none"> - Conduct thorough training sessions for all students - Ensure PPE (safety glasses, hearing protection) is available and worn - Supervise students at all times during machinery operation - Verify competency of each student prior to machinery use - Review emergency procedures with all participants - Post visible safety instructions near equipment - Remove any distractions from the work area - Limit the number of students operating machinery simultaneously - Keep first aid kit accessible - Conduct risk assessment updates regularly 	2M
2. Machine Setup	Incorrect setup, Machinery instability	3H	<ul style="list-style-type: none"> - Only trained personnel to adjust settings - Ensure all machine setups follow manufacturer guidelines - Stabilize machinery on a flat surface - Double-check all safety features before use - Conduct a visual inspection of machinery for defects - Confirm electrical connections are secure - Fit machine guards to prevent access to moving parts - Use lockout/tagout procedures when necessary - Maintain a clear, clean area around the machinery - Assign one person to be responsible for setup 	2M
3. Starting Machinery	Unexpected start-up, Malfunction	4A	<ul style="list-style-type: none"> - Perform pre-start checks on all machinery - Ensure all personnel are clear of moving parts before startup - Verify all control functions before operation - Use an approved start-up routine and checklist - Communicate with all nearby students about machinery start-up - Have an emergency stop protocol in place - Inspect all safety switches for proper function - Implement a buddy system during initial starts 	2M

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.
