								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Planning	inadequate spray strategy, weather changes	3H	<ul style="list-style-type: none"> - Review weather forecasts before scheduling operations - Develop a comprehensive spray plan with contingencies - Obtain necessary permits and approvals - Communicate plan with all personnel involved - Establish communication protocols for updates and changes - Train workers on the plan and any potential adjustments - Ensure all safety data sheets (SDS) are available - Identify sensitive areas (e.g., water bodies, residential areas) - Determine no-spray zones and buffer zones - Set up monitoring system for real-time weather updates 	2M
2. Maintenance	equipment malfunction, chemical spillage	3H	<ul style="list-style-type: none"> - Conduct pre-operation checks on all equipment - Implement regular maintenance schedules - Use only approved parts and qualified technicians - Maintain a clean and organised maintenance area - Ensure proper storage of chemicals and equipment - Train maintenance staff in spill response procedures - Develop and display maintenance documentation and records - Use secondary containment for chemical storage - Label all chemicals and equipment with operational guides - Establish equipment checklists and sign-off processes 	1L
3. Loading Aircraft	contact with chemicals, inadequate personal protective equipment (PPE)	4A	<ul style="list-style-type: none"> - Use mechanical loading systems where possible - Provide appropriate PPE for all personnel - Ensure training in safe handling and loading procedures - Monitor workplace to ensure PPE compliance - Maintain clear access paths for loading equipment - Store chemicals in non-loading areas - Implement isolation measures for chemical areas - Conduct frequent PPE and equipment inspections 	2M
