Risk Rating & Required Action:

4A	Stop work. The risk is intolerable, minate the hazard predesign the activity before proceeding. A Safe Work
	Method Statement (SWMS) or hit er-level authorisation is required.
3H	Review and approve additional controls to the last arts. Senior supervisor sign-off needed.
2M	Ensure all nominated controls are in prace and efficiency roceed with caution; monitor conditions.
1L	Proceed, following standard operating procedures. Monitor and keep records.

Consequence Scale:

Consequence	People (injury/illness)	Project / Assets	Compliance / Reputation
Catastrophic	Fatality or permanent total disability	project shutdown	Significant regulator intervention; criminal prosecution
Major	Serious injury/illness (hospital > 5 days)	critical delay	Improvement notice; major media coverage
ivioderate	Medical-treatment injury; lost-time > 1 day	moderate delay	Minor breach; adverse client comment
Minor	First-aid only, no lost time	negligible delay	Isolated non-conformance
Insignificant	No injury	no schedule impact	Deviation caught and corrected on site

Notes on Hierarchy of Controls:

Remember to apply controls in the preferred order shown by the coloured pyramid:

- 1. Eliminate
- Substitute
- Isolate
- 4. Engineering
- 5. Administrative
- 6. PPE

Always document **why** a lower-order control is accepted if elimination or substitution is not reasonably practicable.

1. Preparation	Chemical exposure, Slips, trips, and falls	3H	- Conduct a safety briefing before beginning work. - Ensure workspace is clean and free from clutt. - Use personal protective equipment (PPE), sch as glove and goggles. - Ensure all containers are labelled correctly. - Set up an eyewash station charby. - Ensure adequate ventilation is the workspace. - Provide training a proper hands to of chemicals. - Establish a set aid response proto. - Veriff that Macrial Safety Data Sheets wiSDS) are available and accessible. - Secure rectrical an inections to avoid tripping hazards.	2M
2. Reading Instructions	Misinterpretation of data Inodequate application technique	21	 Ensure all two memors read and understand the instructions. Lovide raining ressions for clear interpretation. Use read aids or demonstrations where possible. Lave a supervisor check understanding of the instructions. Ensure complex instructions are broken down into simpler steps. Furnish diagrams or sketches to clarify instructions. Encourage questions and clarify doubts before application. Keep instructions available on-site for easy reference. Conduct a quick review session before beginning application. Use checklists to verify that all instruction points are followed. 	1L
3. Measuring Components	Inaccurate measurements, Spillage leading to chemical exposure	3H	 Use calibrated measuring tools. Double-check measurements with a partner. Ensure all measuring tools are clean and calibrated. Utilize spill containment procedures. Wear appropriate PPE including gloves and goggles. Train employees on correct measuring techniques. Keep a spill kit nearby for quick response. Clearly label all measurement tools to avoid mix-ups. 	2M
