Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before the task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	spills, inhalation of fumes	3H	<ul style="list-style-type: none"> - Ensure adequate ventilation in work area - Wear appropriate personal protective equipment (PPE) such as gloves and goggles - Keep absorbent materials nearby to manage spills - Conduct a pre-use inspection of equipment - Employers must provide Safety Data Sheets (SDS) for all solvents used - Ensure training is provided on how to handle solvents safely - Store solvents in clearly labelled sealed containers - Set up appropriate signage indicating the use of hazardous materials - Limit the amount of solvent used to the smallest quantity necessary - Instruct workers to report spills immediately 	1L
2. Transport of Solvents	container damage, leaks during transport	3H	<ul style="list-style-type: none"> - Use approved containers for transportation - Ensure containers are properly sealed before transport - Employ secure storage methods to prevent movement during transport - Maintain clear labelling on all containers - Conduct regular checks for integrity of containers during transport - Use secondary containment where possible - Train workers on safe manual handling techniques to prevent container damage - Wear suitable PPE such as gloves and protective clothing - Limit simultaneous transportation to reduce potential risks - Ensure transport routes are free from obstacles 	2M
3. Storage of Solvents	fire hazard, exposure to environment	3H	<ul style="list-style-type: none"> - Store solvents in a cool, ventilated area - Keep solvents away from ignition sources - Use flame-proof storage cabinets - Ensure containers are clearly labelled with hazard symbols and contents - Regularly inspect storage area for spills or damage - Maintain an up-to-date inventory of stored solvents - Implement a system to manage and rotate inventory to avoid expired solvents - Install fire suppression systems 	1L
