Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before the task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Inaccurate measurements, Improper tools	3H	<ul style="list-style-type: none"> - Ensure measuring tools are calibrated and in good condition - Use appropriate tools for measurement - Train workers on accurate measuring techniques - Review measurements with a supervisor before proceeding - Maintain a clean working area to avoid slips and trips - Regularly assess tools for wear and replace as needed - Provide protective gear for operators such as gloves and eye protection - Implement a checklist system before measurements - Monitor the working environment conditions - Use signage to direct workers around measurement points 	2M
2. Wood Selection	Poor quality wood, Inadequate moisture content	3L	<ul style="list-style-type: none"> - Select wood that meets specified quality standards - Use moisture meters to assess moisture content - Train workers on identifying quality wood - Store wood in a suitable environment to maintain quality - Regularly check and document wood quality - Implement a quality assurance process - Establish relationships with reliable suppliers - Provide PPE for wood handling - Conduct spot checks on wood supplies - Limit wood selection to trained personnel 	1L
3. Cutting	Blade contact injury, Wood kickback	4A	<ul style="list-style-type: none"> - Ensure all machines are fitted with appropriate guards - Train workers on correct use of cutting machinery - Use push sticks to guide wood safely - Regular inspection and maintenance of cutting tools - Implement a lockout/tagout system during maintenance - Enforce the use of PPE, especially eye and hand protection - Set up barriers to delimit cutting areas - Provide signage indicating risks and safety protocols 	2M
