Risk Rating & Required Action:

4A	Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.
3H	Review and approve additional controls before task starts. Senior supervisor sign-off needed.
2M	Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.
1L	Proceed, following standard operating procedures. Monitor and keep records.

Consequence Scale:

Consequence	People (injury/illness)	Project / Assets	Compliance / Reputation
Catastrophic	Fatality or permanent total disability	project shutdown	Significant regulator intervention; criminal prosecution
Major	Serious injury/illness (hospital > 5 days)	critical delay	Improvement notice; major media coverage
Moderate	Medical-treatment injury; lost-time > 1 day	moderate delay	Minor breach; adverse client comment
Minor	First-aid only, no lost time	negligible delay	Isolated non-conformance
Insignificant	No injury	no schedule impact	Deviation caught and corrected on site

Notes on Hierarchy of Controls:

Remember to apply controls in the preferred order shown by the coloured pyramid:

- Eliminate**
- Substitute
- Isolate
- Engineering
- Administrative
- PPE

Always document **why** a lower-order control is accepted if elimination or substitution is not reasonably practicable.

1. Preparation	Exposure to asbestos fibres, Soil disturbance leading to airborne fibres	4A	<ul style="list-style-type: none"> - Conduct a risk assessment prior to starting work - Train workers on asbestos awareness and safe handling procedures - Implement site-specific safety procedures - Mark asbestos-contaminated areas with warning signs - Ensure personal protective equipment (PPE) is available and used - Limit access to the work area to authorised personnel only - Develop an emergency plan for asbestos exposure - Air monitoring to assess fibre levels - Designate a decontamination area for workers - Use trained and competent personnel 	2M
2. Site Inspection	Unidentified asbestos material, Hidden contaminated soil	3L	<ul style="list-style-type: none"> - Conduct a thorough visual inspection by a competent person - Hire an asbestos consultant for identification and assessment - Include soil testing for asbestos presence - Check historical records for past site usage - Continuously monitor for asbestos signs during the work - Limit disturbances to suspect areas until confirmation - Conduct pre-inspection meetings with all staff - Use appropriate detection equipment (e.g. sampling tools) - Isolate any found asbestos material immediately - Establish a communication protocol for findings 	1L
3. Equipment Setup	Contaminated equipment, Release of fibres from equipment	3H	<ul style="list-style-type: none"> - Use equipment designed for asbestos-contaminated environments - Clean and inspect equipment before movement - Apply wet methods to reduce dust during setup - Use HEPA-filtered machinery where possible - Establish a clear decontamination procedure for tools and equipment - Conduct equipment checks for asbestos integrity - Cover equipment not in use - Limit the number of tools in contaminated areas 	2M
