THIS RISK ASSESSMENT IS APPROVED BY THE PCBU ON THIS PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a RISK ASSESSMENT is prepared before the proposed work starts.

								PPE	
Risk Rating & Required Action:								Notes on Hierarchy of Controls:	
4A Stop work. The risk is intolerable. Eliminate the hazard or redesign the activity before proceeding. A Safe Work Method Statement (SWMS) or higher-level authorisation is required.								Remember to apply controls in the preferred order shown by the coloured pyramid:	
3H Review and approve additional controls before task starts. Senior supervisor sign-off needed.								1. Eliminate	
2M Ensure all nominated controls are in place and effective. Proceed with caution; monitor conditions.								2. Substitute	
1L Proceed, following standard operating procedures. Monitor and keep records.								3. Isolate	
								4. Engineering	
								5. Administrative	
								6. PPE	
Consequence Scale:								Always document why a lower-order control is accepted if elimination or substitution is not reasonably practicable.	
Consequence	People (injury/illness)		Project / Assets		Compliance / Reputation				
Catastrophic	Fatality or permanent total disability		project shutdown		Significant regulator intervention; criminal prosecution				
Major	Serious injury/illness (hospital > 5 days)		critical delay		Improvement notice; major media coverage				
Moderate	Medical-treatment injury; lost-time > 1 day		moderate delay		Minor breach; adverse client comment				
Minor	First-aid only, no lost time		negligible delay		Isolated non-conformance				
Insignificant	No injury		no schedule impact		Deviation caught and corrected on site

1. Preparation	Exposure to unidentified biohazards, Cross-contamination	3H	<ul style="list-style-type: none"> - Conduct a pre-assessment to identify potential biohazards - Ensure all personnel are trained in biohazard precautions - Designate a clean area for equipment set up - Label biohazardous materials clearly - Establish emergency procedures for biohazard exposure - Use personal protective equipment (PPE) such as gloves and lab coats - Implement use of biosafety cabinets - Segregate clean and contaminated materials - Limit access to work areas to essential personnel only - Ensure preparation areas are well-ventilated 	2M
2. Sample Collection	Accidental spillage, Needle stick injuries	3H	<ul style="list-style-type: none"> - Use appropriate labelled containers for sample collection - Employ safe techniques for handling sharp instruments - Dispose of sharps in designated containers immediately - Wear gloves and eye protection during collection - Train personnel in spill response procedures - Minimize movement of samples to prevent spillage - Verify that all samples are clearly labelled with hazard information - Avoid recapping needles or bending them - Maintain a clean and organized workspace - Ensure immediate access to first aid kits 	2M
3. Transportation	Leakage during transport, Exposure to extreme temperatures	2M	<ul style="list-style-type: none"> - Use durable, sealed containers for transportation - Label containers with biohazard symbols - Employ appropriate cooling systems (e.g., refrigerated transport) - Secure samples to prevent movement during transport - Train personnel on correct handling procedures - Monitor temperature conditions during transport - Develop a contingency plan for transportation emergencies - Use designated routes to minimize risk exposure 	1L
