

Height Limiter Systen	ns   SAFE WORK METHOD	STATEMENT (SWMS)	
TASK	OR ACTIVITY: Height Limiter Sy	stems	
Business Name:		ABN:	SWMS#
Business Address:			
Contact Person:	Phone:	E 111:	
THIS SAFE WORK METHOD	STATEMENT IS APPROTO BY	THE PCL OF THE ROJECT	
Under the Work Health and Safety Regulation (WHS Regulation), a person conduct the proposed work starts.	cting a business or under a (PC 1) is	required to en that a safe work method s	statement (SWMS) is prepared before
Full Name:			
Signature:		Title:	Date:
Details of the person(s) responsible for ensuring implementation, monitoring	opliance the VMS a well as review	s and modifications of the SWMS.	
Full Name:		Title:	Phone:
ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS S VMS MY HAVE THE FOLLOWING COMMUNICATED	NA, 2 OF ALL RELEVANT PERSONNI EVELOPMENT AND APPROVAL OF	EL WHO HAVE BEEN CONSULTED AND CO	OMMUNICATED TO IN THE
Safety meetings or toolbox talks will be sched ed in accomply with gislative requirements to first identify any site hazards, hazards and then to further take steps to either eliminate or continuate hazard.			
If an incident or a near miss occurs, all work must sto, an alately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK									
			- Conduct a thorough risk assessment before carting work to identify potential hazards and determine appropriate control measures.										
			- Keep the worksite clean, neat, and free of de slipping, tripping, or falling.										
			- Barricade the work area with the ar signage to wait or want of the and others about the dangers associated with working at height or the order of the control of the cont										
	on Falling objects, Uneven surfaces		- Ensure all personnel invo d in to task have eived adequate training on the use and operation of the height linear system, in Juding energy occurrence.										
		<sup>2</sup> M	- Proy works with coopriate personal protective equipment (PPE), such as hard hats, non-slip footward and high coulity clothing to minimise the risk of injuries caused by falling objects or uneven surface:										
			- Inspect all 1 s, equation and machinery related to the height limiter systems, ensuring they are in good we ring a dition and suitable for the intended purpose.										
1. Preparation			- Lelop and impement a Safe Work Method Statement (SWMS) or similar documentation outlining the work s, specific tasks, potential hazards, and appropriate control measures to mitigate risks.	1L									
1. FTeparation	Tailing objects, offever surfaces												lave an effective communication system in place, such as two-way radios, to ensure all team members communicate effectively during the operation.
			Establish a rescue plan in case of emergencies where a worker must be quickly brought down from height, ensuring it is communicated to all personnel involved in the task.										
			- Regularly inspect and maintain the working surface, ensuring it is levelled, free of holes, and any obstructions that could pose a hazard while setting up or operating the height limiter system.										
			- Educate workers on proper ergonomics and body mechanics when lifting, pulling or pushing heavy or bulky items used in height limiter systems, to avoid strain or injury.										
			- Schedule regular safety meetings with staff to review safety protocols, discuss any concerns, and ensure everyone remains vigilant in mitigating risks associated with working at height.										
			- Monitor weather conditions closely and follow best practices for working in different weather situations, such as avoiding work during severe storms or high winds, which could increase the risk of falling objects and uneven surfaces becoming hazardous.										
			- Encourage an open and cooperative safety culture where workers feel empowered to report hazards, near misses, or any concerns without fear of reprisal or punishment, allowing for continual improvement in workplace safety practices.										
2. Site Assessment	Slips and trips, Inadequate lighting	2M	- Conduct a thorough site assessment before starting work, identifying any potential slip or trip hazards and rectifying them where possible.	1L									

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Ensure all workers are wearing appropriate personal protective equipment (PPE), such as non-slip footwear suitable for the task and environment.	
			- Clear the work area of any debris, spills or obstructions that could cause slips, trips or falls.	
			- If working outdoors, monitor weather conditions closely to prevent work during heavy rain, strong winds, or other inclement conditions that could lead a slippery straces or compromised visibility.	
			- Provide additional temporary lighting if nature or using illumination is insufficient to ensure proper visibility, taking care not to create glare or blind size.	
			- Implement a buddy system workers operating heigh to they can assist one another in mitigating any additional risks and help we have out for hazards.	
			- Clearly mark a senange on floor ground level staircases, or ramps with high-visibility paint or caution tape alert worke to the areas an elp prevent slips and trips.	
			- Install tempor handras, guardrails parriers near elevated work areas to prevent accidental falls.	
			- Use the lip may seep covers, or adhesive strips in areas where slipping hazards cannot be eliminated, such a on clines in potentially wet locations.	
			- Train a work rs on poer lifting, bending, and carrying techniques to reduce the risk of accidents aused a physical strain or repetitive tasks.	
			- Regular inspect ladders, scaffolding, and other equipment used for working at height, ensuring they comply industry standards and are in good working condition.	
			evelop a schedule for regularly cleaning and maintaining the work area, removing any potential slip or tripleazards along the way.	
			- Establish clear communication channels between workers and supervisors, encouraging workers to report any new hazards or concerns promptly.	
			- Always have first aid kits available on-site and personnel trained in administering first aid in case of an injury from a slip, trip, or fall. Encourage workers to report any near misses so that preventative measures can be implemented to avoid future accidents.	
			- Regular Equipment Inspection: Conduct thorough inspections of the height limiter systems and associated equipment before each use, following a predetermined checklist to identify and address any defects or wear.	
3 Equipment	Equipment Defective equipment, Untrained personnel		<ul> <li>Qualified Inspectors: Ensure that only trained and qualified personnel are responsible for carrying out equipment inspections, thereby minimising any potential risk from untrained staff overlooking crucial elements.</li> </ul>	
Inspection		3H	- Proper Documentation: Maintain comprehensive records of inspection results, performed maintenance, and equipment usage logs to ensure complete traceability and accountability.	2M
			- Staff Training and Certification: Provide adequate training to all personnel using height limiter systems, making sure they receive proper certification in its operation, safety procedures, and troubleshooting.	
			- Clear Communication: Establish clear communication channels among team members involved in the operations, ensuring that any faults or issues identified during the inspection process are immediately reported and addressed.	

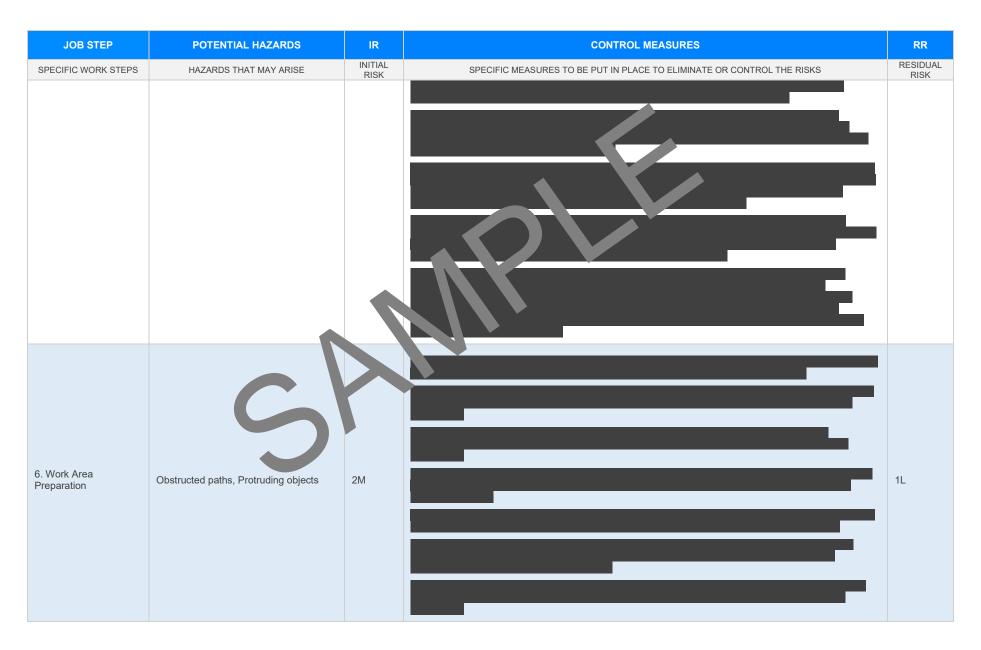

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Equipment Maintenance Schedule: Develop a routine maintenance schedule for height limiter systems to prevent deterioration and equipment failure over time. Adhere to the recommended guidelines provided by equipment manufacturers.	
			- Replacement Parts Availability: Keep an on-simmventory of essential spare parts as per manufacturer specifications, ensuring that any faulty comments can be quickly replaced during routine maintenance, repairs, or emergencies.	
			- Visual Safety Guides: Display visual safety ground warning signage near the height limiter systems, providing easily accessible information for operations to cross-over k their tasks against standard safety protocols.	
			- Pre-Operation Risk assessment of den to evaluate, and control hazards in the worksite. Communicate identified risks and control procures to all levants ries.	
		- Emergency is ponse F in: Create a suplement an emergency response plan that outlines the steps to take case or guide entired in execution, injury, or other incidents related to height limiter systems. Ensure a person of are well-trained in executing this plan in the event of an emergency.

#### SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

#### SAFE WORK IN THE STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains a fective of must be reviewed (and revised if necessary) if relevant control measures are revised. The view process should be carried out in consultation with workers (including contractors of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU mast ensure that advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a rest of the review are advised of the changes in a way that will enable them to implement their duties and the involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- Spot Checks.
- 2. Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

### SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.		
All relevant personnel consulted during the development of the SWMS.		
Name, signature, position and date signed of the person approving the SWMS.		
Specific personnel and qualifications, experience is noted in the SWMS.	7	
Provides a step-by-step process of tasks required to carry out the activity or task.		
Adequate risk assessment of any identified hazards has been completed.		
Foreseeable hazards are identified and documented for each step.	$\boxtimes$	
Any hazards listed in any site risk assessments have been added to the SWMS		
SWMS initial risk (IR) column as well as residual risk (RR) column ppleted.	$\boxtimes$	
Check control measures added to the SWMS are the most effective selectives	$\boxtimes$	
Responsible person is assigned and listed on the part the important portrol measures.	$\boxtimes$	
Permit or licenses requirements specified, sur as Hot Work, Electric Work, Work at Heights etc.		
SWMS identifies plant and equipment to be us		
Details of inspection checks required for any equipment listed an inoted on the SWMS.		
Describes any mandatory qualifications, experience, a g or skills required to perform the work.		
Applicable personal protective equipment is selected on the SWMS.		
Reflects and documents any legislative references and/or Australian Standards.	$\boxtimes$	
Identifies any hazardous substances used with specific control measures in line with any SDS.	$\boxtimes$
