

Olive Harvesting With Shaker | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Olive Harvesting With Shaker

Business Name:	ABN:	SWMS#
Business Address:		
Contact Person:	Phone:	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:
Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.		
Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

CLIENT OR PRINCIPAL CONTRACTOR DETAILS

Client:	SCOPE OF WORKS
Project Name:	
Project Address:	
Project Manager:

Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

- | | |
|--|--|
| <input type="checkbox"/> involves a risk of a person falling more than 2 meters | <input type="checkbox"/> is carried out on or near pressurised gas mains or piping |
| <input type="checkbox"/> is carried out on a telecommunication tower | <input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines |
| <input type="checkbox"/> involves demolition of an element of a structure that is load-bearing | <input type="checkbox"/> is carried out on or near energised electrical installations or services |
| <input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure | <input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere |
| <input type="checkbox"/> involves, or is likely to involve, disturbing asbestos | <input type="checkbox"/> involves tilt-up or precast concrete |
| <input type="checkbox"/> involves structural alteration or repair that requires temporary support to prevent collapse | <input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor |
| <input type="checkbox"/> is carried out in or near a confined space | <input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant |
| <input type="checkbox"/> is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives | <input type="checkbox"/> is carried out in areas with artificial extremes of temperature. |
| <input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning. | <input type="checkbox"/> involves diving work. |

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work.
Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.								PPE

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED

Other PPE Required:

Permit or Licenses Requirements

Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Tripping over tools, Equipment malfunction	2M	<ul style="list-style-type: none"> - Conduct a pre-start safety briefing to ensure all team members are aware of potential hazards and control measures. - Ensure the work area is adequately illuminated to prevent tripping over tools or equipment. - Clearly mark and segregate designated tool and equipment storage areas using bright-coloured tape or barriers. - Conduct regular checks of all tools and equipment to ensure they are in good working order and do not present tripping hazards. - Implement a housekeeping schedule that includes regular clearing of work areas to minimise clutter and tripping risks. - Ensure all personnel wear appropriate personal protective equipment, including sturdy footwear with slip-resistant soles. - Regularly inspect the shaker equipment for signs of wear, damage, or malfunction to ensure it operates safely. - Train workers in proper handling, set-up, and operation of shaker equipment to reduce the risk of malfunction. - Develop an emergency response plan specifically addressing scenarios such as equipment failure or accidents. - Install and utilize guardrails or physical barriers around moving parts and machinery to prevent accidental contact. - Apply lockout/tag-out procedures when conducting maintenance on the shaker to prevent accidental activation. - Use task lighting or portable lighting solutions in poorly lit areas to enhance visibility during operations. - Encourage a safety-first culture by reporting any potential hazards or incidents immediately to supervisors. 	1L
2. Shaker Placement	Incorrect placement of shaker, Damaging tree branches	2M	<ul style="list-style-type: none"> - Conduct a pre-operational check of the shaker to ensure it is functioning correctly before placement. - Ensure all operators are trained and competent in the correct use and placement of the shaker. - Use spotters to guide the shaker operator for precise positioning around trees. - Implement a safe distance zone around the equipment when the shaker is in motion to avoid collisions and injuries. - Check for overhead power lines or other obstructions prior to shaker placement to avoid contact. - Use flagging or markers to identify no-go zones or potential hazards around work areas. 	1L

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			<ul style="list-style-type: none"> - Regularly inspect and maintain shaker components such as clamps and arms to prevent damage to trees. - Communicate clearly with the team using hand signals or radios during placement to ensure coordinated movements. - Ensure that the ground is stable and level where the shaker will be positioned to prevent tipping or loss of control. - Use protective padding on shaker clamps to minimise damage to tree branches during operation. - Evaluate each tree's structure to plan for optimal shaker attachment and minimise branch damage. - Provide adequate lighting if operations take place in low visibility conditions to ensure precise placement. - Review weather forecasts and avoid placing or operating shakers in adverse weather conditions like strong winds or storms. - Develop an emergency response plan, including first aid measures, in case of incidents during shaker placement. 	
3. Operation	Noise exposure, Vibration exposure, Falling olives	3H	<ul style="list-style-type: none"> - Conduct pre-operation checks and maintenance on the shaker to ensure all components are in good working order, reducing noise and vibration. - Provide hearing protection such as earmuffs or earplugs that meet Australian Standards for all operators and new workers to mitigate noise exposure. - Implement a scheduled break routine for operators to minimise continuous exposure to noise and vibration. - Use anti-vibration gloves designed to absorb some of the vibrations transmitted from the machine to the hands. - Train operators in safe driving techniques and efficient operation of the shaker to reduce unnecessary noise and vibration. - Establish exclusion zones around the working area to keep non-essential personnel at a safe distance from noise and falling olives. - Maintain clear communication procedures using hand signals or radios to coordinate operations safely among workers. - Ensure all operators are familiar with emergency shut-off procedures and locations to quickly stop operations if required. - Regularly monitor noise levels using calibrated sound level meters to ensure they remain within acceptable occupational exposure limits. - Encourage regular health check-ups for operators focusing on hearing acuity and potential repetitive strain injuries. - Use machinery models with advanced suspension systems designed to dampen vibrations more effectively. - Schedule operations during times when fewer people are present to limit overall exposure to noise and potential hazards. 	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			<ul style="list-style-type: none"> - Plant durable netting underneath trees to catch falling olives, preventing them from becoming trip hazards and reducing manual handling. - Ensure first aid kits are readily accessible and that personnel are trained in first aid response specific to the potential injuries that could arise from this work step. 	
4. Olive Collection	Back strain from bending, Slips on fallen olives	3H	<p>[Redacted Control Measures]</p>	2M
5. Repositioning	Movement of heavy equipment, Risk of foot injury	3H	<p>[Redacted Control Measures]</p>	2M

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review must be carried out in consultation with workers (including contractors and sub-contractors) who may be affected by the operation of the SWMS and their health and safety representatives who represent that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	<input checked="" type="checkbox"/>	
All relevant personnel consulted during the development of the SWMS.	<input checked="" type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input checked="" type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input checked="" type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input checked="" type="checkbox"/>
