Contact Person:	Phone:	E ail:	
THIS SAFE WORK METHOD	STATEMENT IS APPROVED BY		
Under the Work Health and Safety Regulation (WHS Regulation), a person condu- the proposed work starts.	cting a business or under the (Pour I) is	required to enume that a safe work method s	statement (SWMS) is prepared before
Full Name:			
Signature:		Title:	Date:
Details of the person(s) responsible for ensuring implementation, monitoring	opliance the VMS a well as review	vs and modifications of the SWMS.	
Full Name:		Title:	Phone:
ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS MAS MAN	NATE OF ALL RELEVANT PERSONN EVELOPMENT AND APPROVAL OF	EL WHO HAVE BEEN CONSULTED AND CO THIS SWMS	OMMUNICATED TO IN THE
Safety meetings or toolbox talks will be sched ed in according with gislative requirements to first identify any site hazards, such a complete those hazards and then to further take steps to either eliminate or contact each hazard.			
If an incident or a near miss occurs, all work must store cately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Ensure the workspace is tidy and free from estructions, paying extra attention to keeping walkways and paths clear. This minimises the risk of slips, ps, and father the straight of slips, ps, and father the slips, ps, and slips, p	
			- Proper housekeeping protocols must be estand read maintained throughout the work environment, as well as regular inspections of cleanliness and ganisation.	
			- Clearly identify electrical equipment and cabling bombels a markings to raise awareness for workers and thus reduce the liter shood on lated hazards.	
			- Use cable precisions and overing on areas with a high volume of pedestrian traffic, reducing the risk of tripping over posed cord and cab	
			- Place varning one of uzard indicate mear potential electrical dangers or wet floor surfaces, informer, worker, the ese risks and encouraging them to remain vigilant when navigating through certain areas.	
1. Preparation	Slips, trips and falls, Electrical hazards	2М	- Train the encoyees the proper safety procedures for handling electrical equipment, emphasising the importance of the aring appropriate Personal Protective Equipment (PPE) such as insulated gloves and the protection.	1L
	G		Utilis to containment measures like berms and absorbents for any liquid substances that could lead to ipping a dents, while promptly addressing spills with cleanup procedures.	
			- reablish a routine inspection schedule for identifying potential electrical hazards, assessing their severity, and implementing necessary preventative actions.	
			- Designate and enforce a "no-go" zone around specific high-risk areas where exposure to electrical dangers is elevated, limiting access to only those who are properly trained and equipped.	
			- Implement slip-resistant flooring materials in particularly slippery or wet areas while also considering the use of anti-slip tapes and coatings on existing surfaces.	
			 Incorporate ergonomically designed furniture into the workspace, providing adequate support and comfort for daily tasks, thus minimising fatigue and reducing the chances of slips, trips, and falls due to poor balance or posture. 	
			- Establish a reporting system for employees to communicate any identified risks or hazards, fostering increased involvement, and proactive involvement in maintaining a safe workplace environment.	
			 Conduct manual handling training sessions for all employees involved in material loading, ensuring they understand the correct lifting techniques and importance of seeking assistance when required. 	
2. Material Loading	Manual handling injuries, Struck by moving objects	ЗH	- Perform regular risk assessments to identify hazardous conditions and minimise manual handling risks throughout this work step.	2M
			- Ensure workers wear appropriate PPE, such as gloves and steel-toed footwear, to mitigate risks of injury from moving objects.	

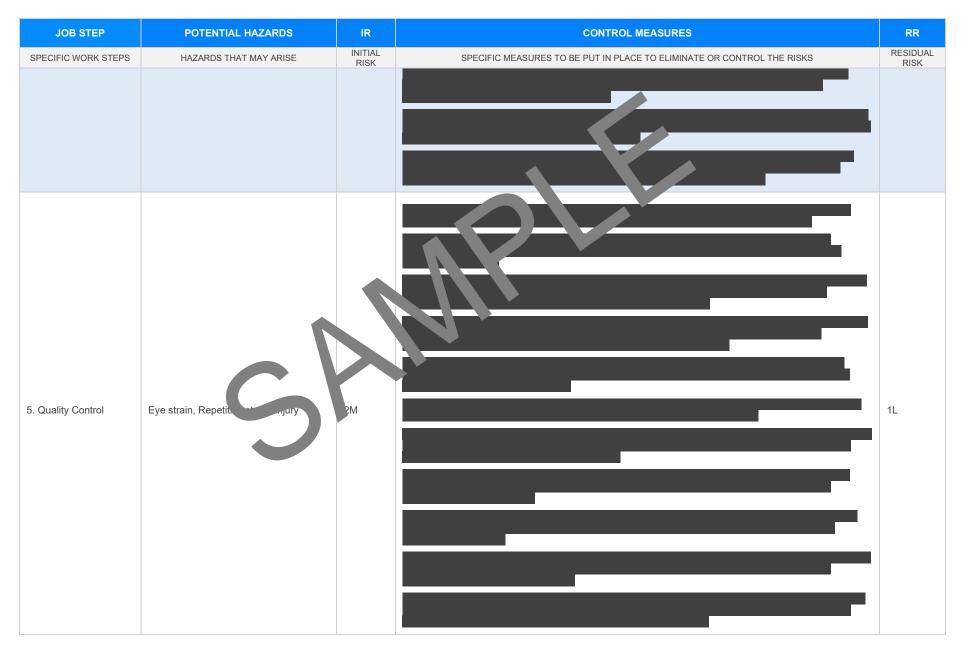

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Implement a clear communication system among team members, including hand signals or radios, to make sure everyone is aware of ongoing operations, potential hazards, and moving equipment.	
			- Arrange materials in an organised and accessible canner to minimise time spent reaching and bending during loading procedures.	
			- Use mechanical aids, like trolleys, pallet juits, or other trong devices, to help transport heavier materials, reducing the risk of manual handline injurier	
			- Establish predefined walkways for workers, classic marked with barriers or signage, to separate them from moving vehicles and equipment and decreasing the character being struck by moving objects.	
			- Schedule frequent breaks for the sengaged in house, strenuous tasks, reducing the likelihood of physical strain approved	
			- Apply a "by a system" the permit seam memory to request assistance with heavy loads or challenging tasts.	
			- Enfrectspeed set up warning signals around designated work zones where movement can be restrice a reduct sks from moving objects.	
			- Implement maintenance programme to ensure any equipment used for material loading is in good working, and the ctioning safely.	
			- wide dequarelighting and visibility in the workspace, allowing workers to see potential hazards and asser the movements effectively.	
			Treate an incident reporting system that fosters open communication about safety concerns and honrds, encouraging continuous improvement within the workplace health and safety framework.	
	C		- Conduct pre-start inspections: Before starting the belling table, ensure that all components and wiring are in good condition and proper functioning state; this helps identify potential electrical hazards before they become an issue during operation.	
			- Training and competency requirements: Ensure that only trained and competent personnel operate the belling table to guarantee proper handling and management of potential hazards.	
			- Use of proper Personal Protective Equipment (PPE): Require all employees working with the belling table to wear relevant PPE such as gloves and safety goggles to protect against possible injury from entanglement or electrical hazards.	
3. Machine Startup	Entanglement, Electrical hazards	3H	- Lockout/tag-out procedures: Implement strict lockout/tag-out procedures for electrical equipment during maintenance or repair work to avoid accidental contact with energised parts.	1L
			- Regular equipment maintenance: Schedule regular maintenance checks on the belling table's electrical components and mechanical systems to make sure they are functioning safely and efficiently.	
			- Guarding and interlock systems: Install physical guards around moving parts and interlock systems to prevent access when the machine is in operation, reducing the risk of entanglement or contact with live electrical components.	
			- Clear signage and labeling: Assign clear hazard identification signs and labels on the belling table to inform operators about potential dangers and remind them of proper protocols.	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Emergency stop mechanisms: Make sure that easily accessible emergency stop buttons are installed and maintained around the belling table, allowing operators to immediately halt the machine in case of unforeseen complications.	
			- Safe work practices: Develop and enforce safe work procedures that involve keeping a safe distance from the operating belling table, staying also unile observing its functions, and removing any loose clothing, jewellery, or unnecessary items to bluce entry ement risks.	
			- Workspace organisation: Keep the area arou, the pelling table clean, well-lit, and free from obstruction to minimise tripping hazards and ensure optimal vibility of the pachine during operation.	
			- Encourage open communication: Foster a culture copressommunication among employees to promote reporting and address concellor related to potential azards or unsafe practices.	
			- Periodic hazer canalysis: egular conduct we place risk assessments, focusing on the belling table, to evaluate a cupdate corrol measures are equired, ensuring their effectiveness in mitigating hazards.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and gualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK N THE ST ATEM ANT MONITORING AND REVIEW

d must reviewed (and

hav be sted by the operation

should be carried out in

The SWMS must be reviewed regularly to make sure it remains fective revised if necessary) if relevant control measures are revised. The viewn consultation with workers (including contractors htractors of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that persons involved with the work are advised that a revision has been made and how they can acces he revised SWMS, including all persons who will need to change a work procedure or system as a region of the review are advised of the changes in a way that will enable them to implement their duties antly with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- 1. Spot Checks.
- 2. Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies. followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS	
The company details have been entered, including the project name and address.			
All relevant personnel consulted during the development of the SWMS.			
Name, signature, position and date signed of the person approving the SWMS.			
Specific personnel and qualifications, experience is noted in the SWMS.			
Provides a step-by-step process of tasks required to carry out the activity or task.			
Adequate risk assessment of any identified hazards has been completed.	\boxtimes		
Foreseeable hazards are identified and documented for each step.	\boxtimes		
Any hazards listed in any site risk assessments have been added to the SWMS	\boxtimes		
SWMS initial risk (IR) column as well as residual risk (RR) column mpleted.	\boxtimes		
Check control measures added to the SWMS are the most effective selections	\boxtimes		
Responsible person is assigned and listed on the part the importation control measures.	\boxtimes		
Permit or licenses requirements specified, su as Hot Work, Electric Work, Work at Heights etc.	\boxtimes		
SWMS identifies plant and equipment to be use	\boxtimes		
Details of inspection checks required for any equipment listed protection on the SWMS.	\boxtimes		
Describes any mandatory qualifications, experience, and g or skills required to perform the work.	\boxtimes		
Applicable personal protective equipment is selected on the SWMS.	\boxtimes		
Reflects and documents any legislative references and/or Australian Standards.	\boxtimes		
Identifies any hazardous substances used with specific control measures in line with any SDS.	\boxtimes
