

Ultraviolet Radiation Exp	osure SAFE WORK METH	OD STATEMENT (SWMS)	
TASK OR	ACTIVITY: Ultraviolet Radiation	Exposure	
Business Name:		ABN:	SWMS#
Business Address:			
Contact Person:	Phone:	E 111:	
THIS SAFE WORK METHOD	STATEMENT IS APPRO' D BY	THE PCL OF THE ROJECT	
Under the Work Health and Safety Regulation (WHS Regulation), a person conduct the proposed work starts.	cting a business or under a (PC 1) is	required to en that a safe work method s	statement (SWMS) is prepared before
Full Name:			
Signature:	NY	Title:	Date:
Details of the person(s) responsible for ensuring implementation, monitoring	opliance the VMS a well as review	s and modifications of the SWMS.	
Full Name:		Title:	Phone:
ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS S VMS MY HAVE THE FOLLOWING COMMUNICATED	NA, 2 OF ALL RELEVANT PERSONNI EVELOPMENT AND APPROVAL OF	EL WHO HAVE BEEN CONSULTED AND CO	OMMUNICATED TO IN THE
Safety meetings or toolbox talks will be sched ed in accomply with gislative requirements to first identify any site hazards, hazards and then to further take steps to either eliminate or continuate hazard.			
If an incident or a near miss occurs, all work must sto, an alately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Direct skin exposure to Ultraviolet (UV) radiation, Eye injuries from UV light reflection	ЗН	 Conduct a UV risk assessment for the special location and time of year to understand UV intensity levels. Schedule outdoor work tasks earlier in the music or later in the afternoon to minimise exposure during peak UV radiation times. Provide and ensure the use or unscreen with a house of skin areas and reapply in severy to hours. Require work on wear anad-bromed hats the shade the face, neck, and ears when working outdoors. Sup a UV projective or glasses that comply with Australian standards to prevent eye injuries from UV light in the tion. Encoding recarring ing-sleeved shirts and trousers made from tightly woven fabric to reduce direct skin exposulation of yrays. Arrange for purple shade structures, such as tents or umbrellas, at the worksite to provide shaded rest and incorporate UV protective films or tinted windows for vehicles and equipment used during outdoor tasks. Incorporate UV protective films or tinted windows for vehicles and equipment of using protective measures. Implement a buddy system where workers monitor each other for signs of overexposure to UV radiation, such as sunburn or heat-related illnesses. Regularly review and update personal protective equipment (PPE) requirements based on changing seasons and UV index forecasts. 	2M
2. Equipment Setting up	Improper handling of UV-generating equipment, Inadequate safety gears	2M	 Ensure all personnel are trained in proper handling techniques for UV-generating equipment and understand the risks involved. Implement a maintenance schedule to regularly check UV-generating equipment for faults or damages that could pose safety hazards. Use barriers or shields around UV-generating equipment to minimise direct exposure to ultraviolet radiation during setup. Ensure all personnel use appropriate personal protective equipment (PPE), such as UV-rated gloves, face shields, and protective clothing. Provide adequate ventilation in areas where UV-generating equipment is being set up to prevent the build-up of ozone created by UV radiation. Clearly mark areas with signage indicating the presence of UV radiation risk when setting up the equipment. 	1L

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAI RISK
			- Limit the time spent setting up UV-generating equipment to reduce exposure duration for personnel.	
			- Implement buddy systems or supervision protocols during equipment setup to ensure compliance with safety procedures.	
			- Use remote handling equipment or tools we ver possible to increase the distance between personnel and active UV sources.	
			- Perform risk assessments prior to equipment at a dentify potential hazards and adjust procedures accordingly.	
			- Have first aid facilities readily vailable and ensure rainers of aid personnel are present to address any potential UV exposure incidents a mediately.	
			- Conduct Ut apposure risk ssession its before commencing operations to identify potential high-exposure area and times	
			- School operation lests during early morning or late afternoon to minimise direct exposure to peak UV let is	
			- Provident Systems of wide-brimmed hats and UV-protective clothing to cover as much skin as possible	
			- poly PF 30 road-spectrum sunscreen and set up reminders for regular reapplication during the work	
			nstall temporary shade structures or use existing shaded areas for conducting equipment tests we never feasible.	
			Use portable UV-blocking tents or canopies while waiting between operational tests to reduce direct sun exposure.	
. Operational Test	Extended exposure to UV raw to long testing hours,	зн	- Rotate personnel to limit individual exposure duration, ensuring no employee spends excessive time under direct sunlight.	2M
	the equipment		- Equip all workers with polarized UV-blocking safety glasses to protect eyes from harmful radiation.	
			- Insist on mandatory breaks in shaded rest areas with access to water for hydration and recovery from heat stress.	
			- Incorporate UV index monitoring into daily briefings and adjust plans based on intensity readings and forecasts.	
			- Train workers on recognising signs of overexposure to UV rays, including fatigue and skin changes, and proper response actions.	
			- Ensure the availability of first aid kits and trained personnel to handle immediate treatment for sunburns or heat-related illnesses.	
			- Implement a check-in procedure using electronic devices to track time spent outdoors and remind teams of safe working practices.	
			- Maintain an equipment logbook to record any erratic behaviour observed during tests, facilitating timely maintenance and reducing unnecessary prolonged exposure.

EMERGENCY RESPONSE - CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK IN THE STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains a fective of must be reviewed (and revised if necessary) if relevant control measures are revised. The view process should be carried out in consultation with workers (including contractors of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU mast ensure that advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a rest of the review are advised of the changes in a way that will enable them to implement their duties and the involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- Spot Checks.
- 2. Consultation with workers, contractors and sub-contractors.
- Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.		
All relevant personnel consulted during the development of the SWMS.		
Name, signature, position and date signed of the person approving the SWMS.		
Specific personnel and qualifications, experience is noted in the SWMS.	7	
Provides a step-by-step process of tasks required to carry out the activity or task.		
Adequate risk assessment of any identified hazards has been completed.		
Foreseeable hazards are identified and documented for each step.		
Any hazards listed in any site risk assessments have been added to the SWMS		
SWMS initial risk (IR) column as well as residual risk (RR) column pleted.		
Check control measures added to the SWMS are the most effective selections		
Responsible person is assigned and listed on the part the important control measures.		
Permit or licenses requirements specified, sur as Hot Work, Electric Work, Work at Heights etc.		
SWMS identifies plant and equipment to be us		
Details of inspection checks required for any equipment listed an inoted on the SWMS.		
Describes any mandatory qualifications, experience, and or skills required to perform the work.		
Applicable personal protective equipment is selected on the SWMS.		
Reflects and documents any legislative references and/or Australian Standards.		
Identifies any hazardous substances used with specific control measures in line with any SDS.
