5T Excavator and Skid Steer Loader Combo On Site | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: 5T Excavator and Skid Steer Loader Combo On Site

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).

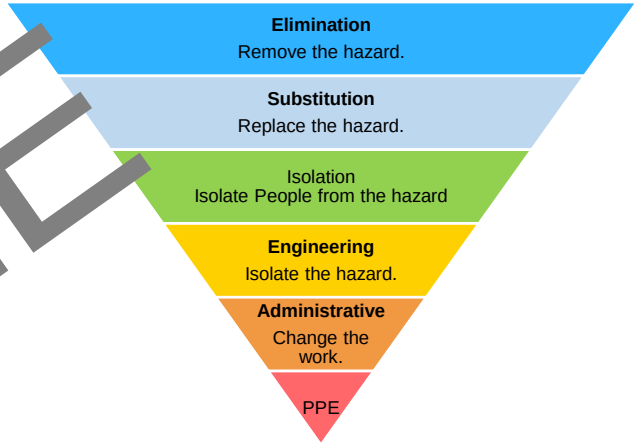
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip and fall hazards, falling objects	2M	- Conduct a safety briefing with all workers involved in the operation to discuss potential hazards and control measures to be implemented during the preparation phase. - Install proper signage in and around the work area to inform workers of potential trip and fall hazards and to maintain awareness of their surroundings. - Maintain a clean and clutter-free work area by removing unnecessary debris, equipment, or tools that could cause tripping or falling incidents. - Inspect the site for any uneven or unstable ground conditions, taking appropriate action to level or stabilise the area to minimise the risk of falls or trips. - Ensure that excavator and skid steer loader operators are properly trained and competent in the safe use and operation of each machine, as well as hazard recognition and avoidance. - Develop an exclusion zone around the working area to keep uninvolved personnel away from potential hazards, such as falling objects. - Establish clear communication methods between operators and supporting crew, including the use of radios, hand signals, or other standard communication practices. - Require all workers to wear appropriate personal protective equipment (PPE) as per company policy, including but not limited to steel-toed boots, high-visibility vests, and hard hats. - Regularly inspect and maintain equipment, ensuring excavators and skid steer loaders are in good working order and free of defects that could contribute to accidents. - Keep material stockpiles at a safe distance from the operating area, minimising the risk of inadvertent contact with machines or falling objects. - Implement a buddy system for workers moving through the site, ensuring there is always someone watching out for obstacles and potential hazards. - Utilise temporary barriers, such as cones or rope, to clearly delineate areas where trip and fall hazards may exist, and to direct foot traffic away from these areas. - Assign a designated safety supervisor for the project, responsible for monitoring work conditions and overseeing the implementation of appropriate control measures to prevent accidents and injuries.	1L	
2. Pre-start inspection	Inadequate machine maintenance, leakage of hazardous chemicals	2M	- Conduct regular and thorough pre-start inspections of the excavator and skid steer loader to identify any potential maintenance issues or signs of wear. - Ensure that all operators are trained and competent in the proper inspection and operation of the equipment to minimise the risk of inadequate machine maintenance. - Maintain up-to-date and accurate service records for both the 5T excavator and the skid steer loader to ensure that required maintenance is performed according to manufacturer recommendations.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Establish a scheduled maintenance programme, based on manufacturer's guidelines, which includes checks for hydraulic hoses, fluid levels, and other components that may cause leakage if damaged or worn. - Prepare an emergency response plan and spill kit in case of hazardous chemical leaks, including the proper PPE (personal protective equipment) and cleanup materials needed. - Implement clear communication channels for reporting any found issues during pre-start inspections, as well as a system for prompt repairs, equipment replacements, or downtime as needed. - Keep the work environment clean and organised to prevent slips, trips, and falls due to potential spills or leaks from the excavator or skid steer loader. - Install appropriate secondary containment systems for storage and handling of hazardous chemicals that may leak from the machinery, such as drip trays or drain covers. - Provide training to workers on the proper handling, storage, and disposal of hazardous chemicals to minimise the risk of leaks and environmental contamination. - Conduct routine environmental audits to monitor and control chemical leakage risks within the worksite, ensuring compliance with local regulations and standards for workplace safety. - Utilise available technologies, such as automatic shut-off systems, to mitigate the occurrence of hazardous chemical leaks in the event of equipment failure, damage, or accidents. - Promote a positive safety culture within the workplace by encouraging employees to actively identify potential hazards, communicate concerns, and contribute to the continuous improvement of safety practices for pre-start inspections and beyond.		
3. Site set up	Poor site access, uneven terrain	2M	- Conduct a thorough pre-start inspection of the site to identify and assess potential hazards, including access points and uneven terrain. - Clearly mark designated routes for site ingress and egress, ensuring they are wide enough to accommodate both the excavator and skid steer loader. - Establish temporary traffic control measures, such as signage and barriers, to direct vehicles and equipment safely through the site. - Provide workers with appropriate personal protective equipment (PPE), such as high-visibility vests and steel-capped boots, to minimise the risk of injuries in the event of an incident. - Ensure all workers and operators have received necessary training on operating the 5T excavator and skid steer loader in varying terrains and conditions. - Regularly inspect the equipment to ensure it is properly maintained and functioning, as a lack of maintenance can contribute to accidents on uneven terrain.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Implement regular communication and safety meetings among workers and operators to discuss any changing site conditions and concerns, so that hazards can be addressed promptly and efficiently. - Use ground protection mats or similar solutions to distribute the weight of the equipment evenly and reduce the risk of the machinery sinking into soft or unstable ground. - Install warning signage around areas with significant inclines or declines, to alert operators to exercise extra caution when navigating these areas with the excavator and skid steer loader. - Assign a designated spotter to assist with the navigation of the equipment, providing additional guidance and support to the operator in traversing difficult terrain. - Employ a "buddy system" among workers so that they can provide support and assistance to one another in the event of an emergency or unexpected site conditions. - Make sure adequate lighting is present during night-time operations or where visibility may be reduced to better monitor potential risks related to site access and uneven terrain. - Prepare an emergency response plan and ensure that all employees are familiar with the procedure in case of incidents involving site access or uneven terrain hazards.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
