

Abrasive Blasting	SAFE WORK METHOD ST	ATEMENT (SWMS)	
TA	SK OR ACTIVITY: Abrasive Blast	ing	
Business Name: [Company Name]		ABN: [ABN]	SWMS#
Business Address: [Company Address]			
Contact Person:	Phone: [Phone]	E fil:	
THIS SAFE WORK METHOD	STATEMENT IS APPROVED BY 1	THE PLOOF THE PROJECT	
Under the Work Health and Safety Regulation (WHS Regulation), a person conduct the proposed work starts.	eting a business or undertaking (F RU) is	required to ure at a safe work method s	tatement (SWMS) is prepared before
Full Name:			
Signature:		Title:	Date:
Details of the person(s) responsible for ensuring implementation, monitoring a	ompliance of the SWMS well as review	s and modifications of the SWMS.	
Full Name:		Title:	Phone:
ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS WMS. ST HAVE THE FOLLOWING COMMUNICATED	N. 1E AND DATED SIGNATURE OF A CO. MUNICATED TO IN THE DEVELO	LL RELEVANT PERSONNEL WHO HAVE BI PMENT AND APPROVAL OF THIS SWMS	EEN CONSULTED AND
Safety meetings or toolbox talks will be sched ed in accordance with egislative requirements to first identify any site hazards, conditions those hazards and then to further take steps to either the conditions of the conditions are or conditional talks.	NAME	SIGNATURE	DATE
If an incident or a near miss occurs, all work must standardly. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

**Note:** A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

- 1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
- 2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS: and.
- 3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Slips, trips, and falls, Manual handling injuries	2M	- Maintain a clean and organised work environment: Keep the abrasive blasting area free from clutter, debris, and any unnecessary materials to minimise the risk of slips, trips, and falls.  - Proper housekeeping: Regularly clean are uspect walkways and surfaces for potential hazards, such as spills or uneven sound, and codress them promptly.  - Implement appropriate signage: Use warning, and barriers to identify potential hazards in the preparation area and alert worker about them.  - Provide suitable footwear: Remire all employees anarour in abrasive blasting tasks to wear slip-remission and shel-toed footwear to particular the risk of slips and manual handling quires.  - Enhance we place lighting Improve tisibilities in work areas with adequate illumination to to be reduce are risk of a counts caused by poor visibility.  - Train mend incount: Ensure that all workers are adequately trained in safe manuals halling to biques, proper use of equipment, and awareness of potential hazard associated we abrasive blasting activities.  Use men hand laids: Provide workers with tools and equipment, such as trolleys, notes, on onvey systems, to assist with heavy lifting and reduce the likelihood of man. The dling injuries.  - Establish clear procedures: Develop standard operating procedures outlining the onest methods for preparing and setting up equipment for abrasive blasting.  - Encourage open communication: Encourage workers to report any hazards or concerns they encounter during preparation activities to their supervisors and promote a culture of safety within the workplace.  - Conduct regular risk assessments: Periodically review and assess the hazards associated with the preparation phase of abrasive blasting activities, and update control measures as necessary to ensure the ongoing safety and well-being of workers in the workplace.	1L	
2. Equipment Set-up	Electrical hazards, Noise exposure	3Н	<ul> <li>Ensure all electrical equipment, including the abrasive blasting machine and any additional power tools, are inspected for damage or wear before use, and are properly grounded.</li> <li>Only use extension cords rated for outdoor use and heavy-duty applications, and verify they have a built-in ground fault circuit interrupter (GFCI) for added protection.</li> <li>Keep cables, cords, and hoses neatly organised and secured to prevent potential trip hazards in the work area.</li> <li>Maintain at least a 3-meter clearance from any water source when using electrical equipment, and avoid working in wet conditions to reduce the risk of electrocution.</li> <li>Use appropriate hearing protection, such as earmuffs or earplugs, to safeguard against noise exposure during the abrasive blasting process.</li> </ul>	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Schedule noisy tasks at times of day when fewer workers are present and exposed to the elevated noise levels.		
			- Encourage affected workers to periodically take was away from the noisy work area to allow the ears some rest and recovery		
			- Implement a hearing conservation program to that includes regular hearing tests and training on the risks associated with nois exposition.		
			- Use equipment with reduced noise emission is a where possible. If necessary, consider retrofitting equipment with noise-reduction features are place older, noisier models with newer ones.		
			- Erect temporary to the creek or acoustic curtains around the work area to help absorb product and precent source waves from avelling beyond the immediate vicinity.		
			- Correct a specifiest for mermine if wor place acoustics can be improved through archit and plant for materials, which may help in reducing overall noise expose a.		
			- Ensur all en loyees the are involved in abrasive blasting have completed proper training and an invelled in safe set-up procedures for the specific equipment and use the specific equip		
			Deve the emergency response plan to address the possibility of an electrical fire other incidents related to equipment malfunction or improper use, and train all self-accordingly.		
			- Provide appropriate ventilation in the work area to prevent the accumulation of dust and ensure workers are protected from inhaling harmful particles.		
			- Implement air monitoring to measure concentrations of any hazardous substances in the air and confirm that the control measures are effective.		
			- Require workers to use respiratory protective equipment (RPE), such as dust masks or respirators specifically designed for abrasive blasting tasks.		
3. Abrasive Selection	Inhalation of dust, Eye injury from abrasive particles	3H	- Ensure that workers receive proper training on how to correctly wear, inspect, clean, maintain, and store RPE.	2M	
	·		- Implement a regular maintenance schedule for dust collection systems to ensure their continued effectiveness and to reduce the risk of inhaling hazardous dusts.		
			- Choose low-dust abrasives where possible to minimise airborne dust generation.		
			- Use wet blasting techniques when feasible to help suppress dust generation and make cleanup easier.		
			- Utilise protective screens or barriers where possible to contain flying particles and reduce the risk of injuries to workers and others present in the work area.		

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul> <li>Ensure that workers are equipped with appropriate personal protective equipment (PPE) such as safety goggles, face-shields, gloves, and protective clothing to prevent contact with abrasive particles.</li> </ul>		
			- Conduct regular toolbox talks or safety briefing or workers to reinforce the importance of wearing their PPE and follows, safe work procedures.		
			- Establish and enforce exclusion zones arough the all sive blasting operation to limit access and minimise potential exposure to the all sive blasting operation to limit access and minimise potential exposure to the all sive blasting operation to limit access and minimise potential exposure to the all sive blasting operation to limit access and minimise potential exposure to the all sive blasting operation to limit access and minimise potential exposure to the all sive blasting operation to limit access and minimise potential exposure to the all sive blasting operation to limit access and minimise potential exposure to the all sive blasting operation to limit access and minimise potential exposure to the all sive blasting operation to limit access and minimise potential exposure to the all sive blasting operations are sive blasting operation.		
			- Implement good housekeeping practices and require car cleaning of the work area, removing all but and debris to previouslips, trips, and falls.		
			- Train worker a now to sally have and storm brasive materials, ensuring they follow the materials of the sall storms and SDS requirements.		
			- Encounage we wars to port any healt, concerns related to dust exposure and regulative view to reports to adapt and improve existing control measures based on real violatexpelore.

#### SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

		SAF WO A	STATEMENT	MONITORING AND R	EVIEW			
The SWMS must be reviewed regularly to racke sure it remains effective and must be reviewed (and revised if necessary) if relevant control measure are subcontracted, are very very process should be carried out in consultation with workers (including contractors are subcontracted) who may be affected by the operation of the SWMS and their health and safety representatives who redesented that work group at the workplace.  When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.				The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:  1. Spot Checks. 2. Consultation with workers, contractors and sub-contractors. 3. Internal audits on a continual basis.  An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

### SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.			
Names and signatures of all relevant personnel consulted during the development of the SWMS.		P	
Name, signature, position and date signed of the person approving the SWMS.			
Specific personnel and qualifications, experience is noted in the SWMS.	P		
Provides a step-by-step process of tasks required to carry out the activity or task.			
Adequate risk assessment of any identified hazards has been completed.			
Foreseeable hazards are identified and documented for each step.			
Any hazards listed in any site risk assessments have been added to the SWI			
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.			
Check control measures added to the SWMS are the most effecting sections.			
Responsible person is assigned and listed on the SWMS for the imperent of contameasures.			
Permit requirements specified, such as Hot Work, Electrical Work, Vorat Heights etc.			
SWMS identifies plant and equipment to be u d.			
Details of inspection checks required for any equipment listed at noted on the SWMS.			
Describes any mandatory qualifications, experience raining skills required to perform the work.			
Applicable personal protective equipment is selected on the SWMS.			
Lists any required permits or licenses.			
Reflects and documents any legislative references and/or Australian Standards.			
Identifies any hazardous substances used with specific control measures in line with any SDS.
