

## Adjustment Of Light Fittings | SAFE WORK METHOD STATEMENT (SWMS)

### TASK OR ACTIVITY: Adjustment Of Light Fittings

Business Name:	ABN:	SWMS#
Business Address:		
Contact Person:	Phone:	Email:

### THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:
Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.		
Full Name:	Title:	Phone:

### ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

### NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

## CLIENT OR PRINCIPAL CONTRACTOR DETAILS

Client:	SCOPE OF WORKS
Project Name:	
Project Address:	
Project Manager:

## ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

<input type="checkbox"/> involves a risk of a person falling more than 2 meters	<input type="checkbox"/> is carried out on or near pressurised gas mains or piping
<input type="checkbox"/> is carried out on a telecommunication tower	<input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines
<input type="checkbox"/> involves demolition of an element of a structure that is load-bearing	<input type="checkbox"/> is carried out on or near energised electrical installations or services
<input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure	<input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere
<input type="checkbox"/> involves, or is likely to involve, disturbing asbestos	<input type="checkbox"/> involves tilt-up or precast concrete
<input type="checkbox"/> involves structural alteration or repair that requires temporary support to prevent collapse	<input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor
<input type="checkbox"/> is carried out in or near a confined space	<input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant
<input type="checkbox"/> is carried out in/near a shaft or trench deeper than 2m or tunnel involving use of explosives	<input type="checkbox"/> is carried out in areas with artificial extremes of temperature.
<input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning.	<input type="checkbox"/> involves diving work.

## ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

## RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			<b>Elimination</b> Remove the hazard.
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	<b>Substitution</b> Replace the hazard.
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	<b>Isolation</b> Isolate People from the hazard
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	<b>Engineering</b> Isolate the hazard.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	<b>Administrative</b> Change the work.
<b>Notes on Hierarchy of Controls:</b> Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.								<b>PPE</b>

## PERSONAL PROTECTIVE EQUIPMENT (PPE)

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Other PPE Required:

## Permit or Licenses Requirements

## Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Electric shock, Fall from height	4A	<ul style="list-style-type: none"> <li>- Ensure all workers are trained and competent in electrical safety and working at heights.</li> <li>- Conduct a pre-work risk assessment to identify potential hazards.</li> <li>- Isolate power by switching off the circuit breaker before starting any work on light fittings.</li> <li>- Use lockout/tagout procedures to ensure that the power supply remains off during the task.</li> <li>- Wear appropriate personal protective equipment, such as insulated gloves and non-slip footwear.</li> <li>- Implement a permit-to-work system for tasks that involve electrical components or elevated positions.</li> <li>- Use stable and secure ladders or mobile platforms to access light fittings, ensuring they are set up on a flat surface.</li> <li>- Maintain three points of contact when climbing ladders and use ladder safety devices where possible.</li> <li>- Avoid overreaching or leaning while on ladders; reposition the ladder for better access if needed.</li> <li>- Inspect tools and equipment before use to ensure they are in good condition and suitable for the task.</li> <li>- Use low voltage power tools or battery-operated equipment to minimise the risk of electric shock.</li> <li>- Assign a spotter or observer to monitor safety compliance during the work process.</li> <li>- Establish clear communication protocols among all team members, especially if any unforeseen incidents occur.</li> </ul>	2M
2. Ladder Placement	Fall from ladder, Struck by moving vehicles	3H	<ul style="list-style-type: none"> <li>- Select a ladder that is suitable for the task and rated for the weight it will support.</li> <li>- Ensure the ladder is in good condition, free from damage, and all safety mechanisms are functioning correctly.</li> <li>- Position the ladder on stable, flat ground to prevent wobbling or tipping.</li> <li>- Place the ladder at the correct angle, typically 1:4 ratio, meaning 1 unit out for every 4 units up.</li> <li>- Secure the ladder at the base or top to prevent movement during use, especially if on unstable surfaces.</li> <li>- Ensure no overhead obstacles like power lines can be contacted when setting up or using the ladder.</li> <li>- Use barricades or signs to create a safe work zone around the base of the ladder to warn others nearby.</li> <li>- Ensure workers using the ladder maintain three points of contact at all times to reduce the risk of falls.</li> <li>- Limit the time spent working from a ladder to reduce fatigue and loss of concentration.</li> <li>- Provide a spotter if practical to stabilize the ladder and alert the worker of potential hazards.</li> <li>- Prohibit the use of the top rung of the ladder unless designed for standing.</li> <li>- Always face the ladder while ascending or descending to maintain control and balance.</li> </ul>	1L

<p>urn injuries</p>	<p>3H</p>	<ul style="list-style-type: none"> <li>- Conduct a pre-start safety briefing to ensure all workers are aware of the risks.</li> <li>- Verify and confirm that the correct circuit breaker has been identified.</li> <li>- Use lockout/tagout devices on the circuit breakers to prevent accidental energization.</li> <li>- Ensure all workers involved have applied their personal lockout devices.</li> <li>- Test the power supply with a non-contact voltage tester to ensure it is de-energized.</li> <li>- Clearly label the isolated circuit and communicate its status to all personnel.</li> <li>- Keep a written record of the isolation process, including time, date, and personnel involved.</li> <li>- Use insulated tools and equipment when working near electrical components to avoid electric shock.</li> <li>- Maintain a clear work area around the electrical panel to avoid tripping or contact with live components.</li> <li>- Ensure that only qualified and trained personnel perform electrical isolation tasks.</li> <li>- Have an emergency response plan in place, including first aid procedures for electrical incidents.</li> <li>- Wear appropriate personal protective equipment (PPE), such as gloves and eye protection, when performing the isolation.</li> <li>- Display visible warning signs indicating "Electrical Work In Progress."</li> <li>- Verify the absence of potential back-feed from external sources.</li> </ul>
---------------------	-----------	---

1. **Introduction**  
 This report provides a comprehensive overview of the project's objectives, scope, and methodology. It details the research process, data collection, and analysis, leading to the conclusions and recommendations presented in the final section.

2. **Background**  
 The project was initiated in response to the growing need for improved data management systems. The current system, while functional, lacks the scalability and security required for future growth. This report outlines the rationale for the proposed solution and the expected benefits.

3. **Methodology**  
 The research methodology employed a combination of qualitative and quantitative approaches. Data was collected through interviews with stakeholders, surveys of end-users, and analysis of existing system logs. The findings were then synthesized to identify key areas for improvement.

4. **Findings**  
 The analysis revealed several critical areas for improvement, including the need for enhanced data security, improved user interface, and increased system scalability. These findings serve as the foundation for the recommendations provided in the next section.

5. **Recommendations**  
 Based on the findings, the following recommendations are proposed:

- Implement advanced security protocols to protect sensitive data.
- Redesign the user interface to enhance usability and efficiency.
- Upgrade the underlying infrastructure to support increased scalability.

6. **Conclusion**  
 The project has successfully identified the challenges facing the current system and provided actionable recommendations for improvement. The implementation of these recommendations is expected to result in a more secure, scalable, and user-friendly system, thereby meeting the organization's long-term goals.

## EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

## SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

## SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

**The SWMS must be reviewed regularly** to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review must be carried out in consultation with workers (including contractors and sub-contractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

**The SWMS must be monitored regularly** for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

## SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	<input checked="" type="checkbox"/>	
All relevant personnel consulted during the development of the SWMS.	<input checked="" type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input checked="" type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input checked="" type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input checked="" type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input checked="" type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input checked="" type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	<input checked="" type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input checked="" type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input checked="" type="checkbox"/>	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input checked="" type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input checked="" type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input checked="" type="checkbox"/>	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	<input checked="" type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input checked="" type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input checked="" type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input checked="" type="checkbox"/>
