Air Receiver | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Air Receiver

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-bearing.	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrity of a structure.	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing asbestos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that requires temporary support to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

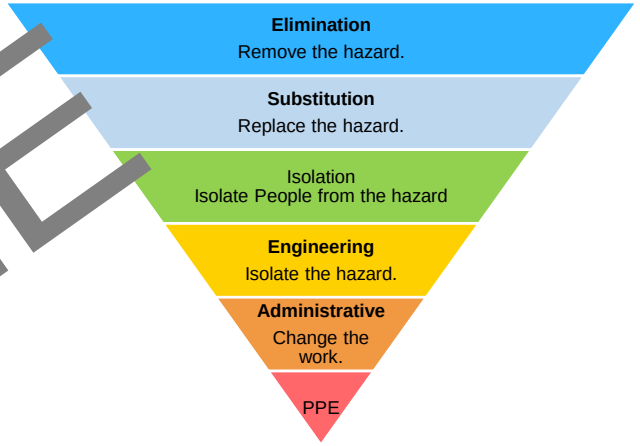
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Manual handling injuries, Slips and trips	2M	- Conduct a thorough risk assessment before starting work to identify any potential hazards and implement appropriate control measures. - Provide manual handling training for all workers involved in the task, including correct lifting techniques and the use of mechanical aids when required. - Ensure that workers are wearing appropriate personal protective equipment (PPE), such as steel-capped boots, gloves, and high-visibility vests for protection against potential hazards. - Maintain well-lit and tidy work areas, with regular inspections for trip hazards or slippery surfaces. Clean up spills immediately using absorbent materials. - Use signage and barricades to contain off work areas where there is increased potential for falls or trips. - Implement a buddy system for handling heavy or awkward loads, ensuring two or more people share the load evenly to minimise strain on individuals. - Ensure that adequate breaks are scheduled to avoid fatigue and provide workers with sufficient recovery time in between lifting tasks. - Keep tools and equipment regularly inspected and well-maintained to reduce the risk of malfunction or equipment failure. - Encourage workers to report any potential hazards, near misses or incidents to their supervisor as soon as possible. - Conduct regular toolbox talks with workers on the importance of workplace health and safety, focusing on specific hazards present at the worksite. - Store materials and equipment appropriately, ensuring they are not obstructing walkways or creating additional slip or trip hazards. - Routinely review and update safety procedures and policies to ensure compliance with relevant Australian Workplace Health and Safety legislation and industry best practices.	1L	
2. Pre-Operations Inspection	Exposure to high pressure air, Unsecured equipment	2M	- Conduct a thorough risk assessment before beginning the operation to identify potential hazards and establish appropriate control measures. - Ensure all operators have undergone appropriate training and are competent in handling high-pressure air systems, including the use of safety equipment. - Verify that the air receiver is securely anchored and stable before starting operations to prevent it from becoming unsecured during use. - Regularly inspect and maintain the air receiver and associated equipment in accordance with the manufacturer's instructions and relevant Australian standards. - Install adequate guarding or barriers around the air receiver if necessary to protect workers from exposure to high-pressure air.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Fit pressure relief devices to the air receiver to minimise the risk of over-pressurisation and subsequent injury due to an explosion or rapid release of compressed air. - Utilise suitable Personal Protective Equipment (PPE) for employees working in close proximity to the air receiver, including safety glasses, hearing protection, and protective clothing. - Establish exclusion zones around the air receiver during operation to limit access to authorised personnel only, thereby minimising the risk of accidental exposure to high-pressure air. - Implement safe lifting and manual handling practices when moving, positioning or securing the air receiver, to reduce the likelihood of injury to workers. - Clearly display warning signs and labels adjacent to the air receiver to alert employees of the potential risks involved in its operation and ensure they follow pre-determined safe procedures. - Develop and implement emergency response plans, including evacuation and first aid procedures, in case an incident involving the air receiver occurs. - Regularly review and update Safe Work Method Statements (SWMS) to include new hazards identified during ongoing risk assessments and any changes in the workplace environment. - Encourage open communication between employees, supervisors, and management regarding workplace health and safety concerns, so that potential issues can be addressed promptly and effectively.		
3. Equipment Set-Up	Incorrect installation, Use of damaged components	2M	- Ensure that the installation is carried out according to the manufacturer's guidelines and relevant Australian standards, such as AS 1210 and AS 4343. This will help prevent incorrect installation and use of damaged components. - Conduct a thorough inspection of all components before installation to identify any signs of damage, wear or malfunction. Replace or repair all damaged parts prior to equipment set-up. - Provide proper training and instruction to workers involved in the equipment set-up process, ensuring they are competent and aware of all safety precautions related to air receiver systems. - Use appropriate lifting gear and techniques when positioning the air receiver, preventing accidental drops or mishandling during installation. - Install all pressure relief and control devices as specified by the manufacturer, ensuring they are properly calibrated and tested for correct functionality. - Ensure that the air receiver is properly secured and grounded to prevent movement or displacement during operation and maintenance activities. - Install and maintain appropriate safety signage and warning labels on the air receiver, alerting workers to potential hazards associated with its operation.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Routinely inspect and maintain all piping, fittings, valves, and connections for leaks, corrosion, or damage, repairing or replacing components as necessary to prevent inadvertent system failure. - Consult with a qualified engineer or technical specialist if modifications or alterations to the system are required, ensuring compliance with relevant standards and regulatory requirements. - Ensure that all workers operating or maintaining the air receiver are provided with suitable personal protective equipment (PPE), such as safety goggles, hearing protection, and gloves, to reduce the risk of injury. - Establish clear communication protocols amongst workers during the equipment set-up process to avoid misunderstandings, missed steps, or errors that could lead to incorrect installation or use of damaged components. - Encourage a workplace culture that promotes safety and encourages workers to report any concerns, hazards, or incidents related to air receiver systems in a timely manner. Regularly review and update the Safe Work Method Statement (SWMS) to reflect changes in equipment, processes, or industry best practices.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
