Asbestos Containing Materials Removal | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Asbestos Containing Materials Removal

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-bearing.	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrity of a structure.	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing asbestos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that requires temporary support to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

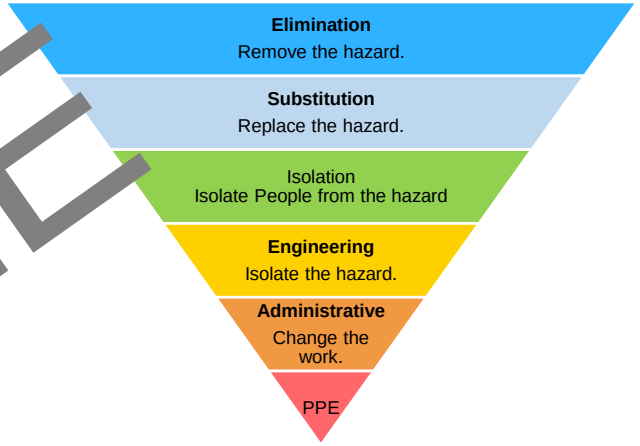
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Asbestos dust inhalation, Electric sho	3H	- Develop a comprehensive Asbestos Removal Control Plan (ARCP) outlining the procedures, methods, and resources required for safely removing asbestos-containing materials from the worksite. - Conduct thorough risk assessments to identify asbestos-containing materials, potential hazards, and define work zones to ensure effective control measures are in place. - Only engage personnel who have undergone specialised training in asbestos removal, and are certified to handle and dispose of asbestos-containing materials safely. - Utilise appropriate personal protective equipment (PPE), including respiratory masks with HEPA filters, disposable overalls, gloves, and shoe covers, which must be worn by all authorised personnel working near or handling asbestos-containing materials. - Clearly demarcate the work zone through signage, barrier tapes, and warning notices, restricting access to only authorised and trained personnel involved in the asbestos removal process. - Establish decontamination points at designated entry and exit points of the work zone, equipped with facilities for workers to safely remove contaminated disposable PPE, wash hands/face, and change into clean clothes. - Ensure that all tools and equipment used in asbestos removal are either designed explicitly for asbestos work or thoroughly decontaminated after use, to reduce the risk of electric shock and any additional exposure. - Implement wet removal techniques, such as spraying water or using specialised foam agents, to suppress asbestos dust and minimise its dispersal during the removal process. - Use specialised vacuum cleaners fitted with HEPA filters to collect any asbestos-contaminated dust and debris, ensuring proper disposal according to local regulations. - Continuously monitor airborne asbestos levels within the work zone during material removal using calibrated air monitoring devices, adjusting control measures accordingly if levels exceed the allowable exposure limit. - Perform regular visual inspections for any signs of damaged or deteriorated asbestos-containing materials, ensuring prompt remediation or disposal actions are taken to minimise further risks. - Maintain clear communication avenues between asbestos removal workers, site supervisors, and the client to effectively manage potential hazards, ensure adherence to control measures, and facilitate a swift response in case of an emergency.	2M	
2. Site Inspection	Slips, trips & falls, Exposure to asbestos fibres	3H		1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Conduct a thorough site inspection before commencing work, ensuring to identify and assess all potential hazards, such as uneven surfaces or obstacles that could lead to slips, trips, and falls. - Provide appropriate Personal Protective Equipment (PPE) for workers, including non-slip footwear, to minimise the risk of slips, trips, and falls while navigating the site, and to prevent exposure to asbestos fibres. - Implement a strict prohibition on workers eating, drinking, or smoking in the designated asbestos removal area, reducing the chance of ingesting or inhaling harmful asbestos fibres. - Clearly mark the designated work zone with warning signs and barriers, informing workers and visitors of the ongoing asbestos removal, and restricting access to authorised personnel only. - Ensure adequate ventilation during the removal process to control the concentration of asbestos fibres in the air and to minimise worker exposure. - Employ wet cleaning methods or a suitable dust suppression agent to keep asbestos materials damp, thus reducing the release of airborne asbestos fibres during the removal process. - Utilise designated vacuum cleaners with High-Efficiency Particulate Air (HEPA) filters to safely clean up any spills, debris, or dust containing asbestos fibres; prohibit the use of regular vacuums and brooms for cleaning purposes. - Provide proper training to workers on how to identify and manage asbestos-containing materials, as well as best practices for handling these materials to prevent accidental exposure. - Develop and implement a detailed procedure for responding to any incidents where workers may have been exposed to asbestos fibres, including immediate decontamination processes and follow-up medical checks. - Conduct regular audits and reviews of the site's control measures, procedures, and worker adherence to these guidelines, to ensure continuous improvement of health and safety practices during the asbestos removal process.		
3. Isolation of Work Area	Unauthorised access, Contamination of surrounding areas	3H	- Restrict access: Implement a secured perimeter around the work area, allowing only authorised personnel with appropriate PPE to enter the asbestos removal zone. This can be done using barrier tapes, cones, or temporary fencing. - Signage: Clearly display signs around the isolation area indicating the presence of asbestos and warning unauthorised persons not to enter. Also, include contact details for the responsible person should anyone have any concerns. - Negative air pressure units: Utilise negative air pressure units to help prevent the spread of airborne asbestos fibers beyond the isolated work area. This will ensure that any air movement is directed into containment filtration systems. - Covers and encapsulation: Ensure all surfaces outside the isolation area are covered with protective sheeting or plastic where possible, to further reduce the risk	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			of contamination. Surfaces inside the work area should also be encapsulated to minimise the release of asbestos fibers. - Decontamination facilities: Establish a decontamination area adjacent to the work zone for workers to properly clean themselves and their equipment before leaving the site. This includes the provision of shower facilities and changing areas where necessary. - Air monitoring: Conduct regular air quality testing within the surrounding environment to detect any potential asbestos contamination. This will help ensure that control measures continue to be effective in containing the spread of asbestos fibers. - Dust suppression: Use water misting or dampening methods to keep dust levels low during the removal process. Additionally, avoid using high-pressure cleaning methods or mechanical cutting tools that may generate excessive amounts of dust. - Secure storage: Ensure any asbestos waste generated is stored in sealed containers which are clearly labelled and locked away from unauthorised personnel. These containers should then be transported to an approved waste disposal facility. - Toolbox talks: Provide regular toolbox talks to everyone involved in the removal project, emphasising the importance of maintaining the integrity of the isolated work area to prevent uncontrolled exposure and contamination. - Regular inspections: Have a designated site supervisor or safety officer conduct regular inspections of the work area, enforcing compliance with established control measures and taking actions to address any potential risks that may arise during the asbestos removal process.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
