Backhoe Front End Loader | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Backhoe Front End Loader

Business Name: [Company Name]		ABN: [ABN]	SWMS#
Business Address: [Company Address]			
Contact Person:	Phone: [Phone]	Email:	

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-bearing.	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrity of a structure.	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing asbestos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that requires temporary support to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

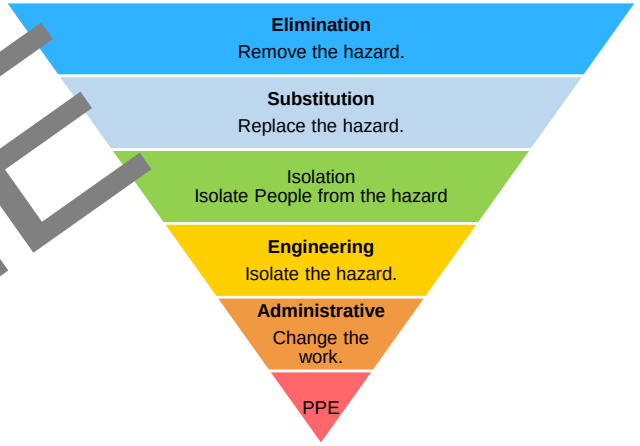
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1.Preparation	Slips, trips and falls, Incorrect manual handling of equipment	2M	- Conduct a thorough site inspection before commencing work to identify potential hazards such as uneven ground, obstacles, and clutter that could cause slips, trips and falls. - Clearly mark and signpost designated walkways and work zones to keep pedestrian traffic separate from work areas, reducing the likelihood of accidental trips, slips and falls. - Ensure all workers have the necessary PPE, including slip-resistant, steel-toed boots with good ankle support to minimise the risk of injury due to slips, trips, and falls. - Implement a housekeeping schedule to maintain cleanliness and organisation on the worksite, making sure to promptly attend to any spills, leaks or debris that may cause slipping or tripping hazards. - Provide adequate work area lighting, especially in high-traffic areas, to improve visibility and reduce the risk of accidents due to poor lighting conditions. - Implement ongoing safety training for staff, focusing on proper manual handling techniques when lifting and moving heavy equipment, as well as slip, trip, and fall prevention strategies. - Utilise mechanical lifting aids, such as trolleys, pallet jacks, or hoists, where possible, to minimise manual handling risks and reduce the physical strain on workers. - Ensure that the Front End Loader is regularly inspected and maintained by competent personnel, checking for potential hazards and wear that could contribute to unsafe operation. - Establish clear communication protocols for all team members on site, including hand signals, visual aids, or two-way radios, to promote safe, coordinated work practices. - Encourage a safety-conscious culture by empowering staff to report incidents, near-misses, and unsafe practices, and taking necessary steps to rectify these situations promptly. - Develop emergency response procedures and conduct regular drills to ensure all workers are familiar with the steps to take in the event of an accident or incident related to slips, trips, falls or incorrect manual handling. - Continuously review and update the Safe Work Method Statement as necessary to account for new work processes, changing site conditions, or introduction of new equipment, ensuring that appropriate control measures are in place to minimise hazards.	1L	
2.Site inspection	Exposure to hazardous materials, Uneven ground surface	3H	- Conduct a thorough site inspection before work commences to identify any hazardous materials present in the area, such as asbestos, chemicals or biological agents.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Develop and implement a hazardous materials management plan for the safe handling, storage, and disposal of hazardous substances identified during the site inspection. - Train all operators and relevant personnel on the hazards associated with the identified hazardous materials, and provide them with appropriate personal protective equipment (PPE) as needed, such as gloves, masks, and eye protection. - Obtain and maintain Safety Data Sheets (SDS) for all hazardous substances present at the worksite, and ensure workers have access to this information to understand the potential risks and precautions necessary. - Establish clear signage and barriers around hazardous areas or contaminated zones, informing personnel of the potential risks and access restrictions. - Continuously monitor the work environment for signs of hazardous material exposure, such as unusual odours or visible dust particles, and take immediate action if required. - Ensure that all vehicles and equipment (including backhoe front-end loader) are thoroughly inspected and well-maintained to prevent any leaks or spills of hazardous materials. - Assess and document the condition of the ground surface at the worksite, identifying areas with poor stability, steep slopes, or uneven surfaces that may pose a risk to operators and equipment. - Use appropriate machinery (such as compactors, rollers, or levelling attachments) to prepare and level uneven ground surfaces to minimise the risk of accidents or damage to the equipment. - Implement suitable access controls, such as barricades, cones, or warning tapes, to restrict unauthorised entry into areas with uneven ground surfaces or areas where hazardous materials are present. - Provide clear communication and instructions to workers regarding any specific hazards or risks associated with uneven ground surfaces, such as maintaining safe working distances and operating at reduced speeds when moving over uneven terrain. - Monitor weather conditions, as wet or slippery surfaces may increase the risk of accidents or injuries when working with heavy machinery such as backhoe front-end loaders. - Develop a site-specific emergency response plan for rapid and efficient management of incidents involving hazardous materials, including spill containment, worker evacuation, and communication with relevant authorities. - Conduct regular safety audits and toolbox talks to review hazard controls and reinforce safe work practices among all personnel operating at the worksite, ensuring the continued safety and wellbeing of everyone involved.		

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
3.Establish communication procedures	Miscommunication, Inadequate training or experience	2M	- Implement clear and concise communication protocols, including the use of standardised terminology and hand signals. - Conduct pre-start meetings and daily toolbox talks to ensure all workers are aware of the work plan, hazards, and control measures in place. - Provide training for all operators and workers on proper communication procedures, relevant to their tasks and equipment used. - Assign specific tasks to each team member to avoid miscommunication that could lead to confusion, errors, or accidents. - Ensure all workers have a thorough understanding of their individual roles and responsibilities as it pertains to site safety and the team's communication procedures. - Regularly review and update the communication procedures based on project progress, team feedback, or changes in the work environment. - Establish procedures for reporting any hazards, near misses, or incidents directly to supervisors or management to promote open and transparent communication channels. - Utilise appropriate communication tools and technologies, such as two-way radios, to aid in maintaining contact between workers and enhancing overall communication within the group. - Ensure all workers, particularly those who may be experiencing language barriers or hearing difficulties, are provided with additional support and/or resources to participate fully in the communication process. - Monitor and evaluate the competency levels of personnel consistently to identify gaps in knowledge, and address these with additional training or guidance. - Conduct regular on-site inspections to assess adherence to the established communication procedures and address any non-compliance immediately. - Develop an emergency response plan, detailing specific communication plans in various scenarios, and inform all workers of their role in a potential emergency situation. - Encourage a positive and open workplace culture where workers feel comfortable voicing concerns related to communication processes, hazards or any other issues that may impact overall site safety. - Foster cooperation between different trades and teams working simultaneously in the area, promoting respectful communication and collaboration to minimise hazards related to miscommunication, inadequate training, or inexperience.	1L

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
