

Battery Powered Hand Tools | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Battery Powered Hand Tools

Business Name:	ABN:	SWMS#
Business Address:		
Contact Person:	Phone:	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:	Title:	Date:
------------	--------	-------

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:
------------	--------	--------

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

SCOPE OF WORKS

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

☐ involves a risk of a person falling more than 2 meters

☐ is carried out on or near pressurised gas mains or piping

☐ is carried out on a telecommunication tower

☐ is carried out on or near chemical, fuel or refrigerant lines

☐ involves demolition of an element of a structure that is load-bearing

☐ is carried out on or near energised electrical installations or services

☐ involves demolition of an element related to the physical integrity of a structure

☐ is carried out in an area that may have a contaminated or flammable atmosphere

☐ involves, or is likely to involve, disturbing asbestos

☐ involves tilt-up or precast concrete

☐ involves structural alteration or repair that requires temporary support to prevent collapse

☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor

☐ is carried out in or near a confined space

☐ is carried out in an area of a workplace where there is any movement of powered mobile plant

☐ is carried out in/near a shaft or trench deeper than 2m or tunnel involving use of explosives

☐ is carried out in areas with artificial extremes of temperature.

☐ is carried out in or near water or other liquid that involves a risk of drowning.

☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work.
Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.								PPE

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED

Permit or Licenses Requirements

Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Lack of training, incorrect tool selection	3H	<ul style="list-style-type: none"> - Provide comprehensive training to all workers on the correct use of battery powered hand tools. - Develop and implement a competency assessment program to ensure workers have adequate skills. - Regularly conduct refresher training sessions to keep workers updated on best practices and safety procedures. - Clearly label and organise tools for easy identification and access, ensuring the right tool for the job is selected. - Display signage or guides outlining which tools are appropriate for specific tasks. - Create a checklist for workers to follow when selecting tools for different tasks. - Introduce a buddy system where experienced workers mentor less experienced ones in proper tool usage. - Establish a procedure for inspecting tools before use to ensure they are suitable and safe for the intended tasks. - Maintain an up-to-date inventory system that tracks the condition and status of all battery powered hand tools. - Ensure all user manuals are accessible, and provide summary guides on how to select and use tools correctly. - Limit access to certain battery powered hand tools to only those who have been trained and authorised to use them. - Implement a colour-coding system for tools to quickly indicate their suitability for various tasks. - Schedule regular toolbox meetings to discuss tool selection, safety tips, and recent incidents or near misses. 	2M
2. Tool Inspection	Faulty tools, unlabelled power sources	4A	<ul style="list-style-type: none"> - Conduct a pre-use check to ensure tools are in good working condition. - Implement a tagging system for tools that pass inspection, indicating they are safe for use. - Ensure all power sources are clearly labelled with the voltage and type of battery used. - Establish an inventory management system to keep track of tool maintenance schedules and status. - Train workers in recognising signs of wear or damage on battery-operated tools. - Regularly inspect battery terminals for corrosion or damage. - Replace damaged or faulty tools immediately and remove them from service. - Use tools designed with overload protection to prevent overheating. - Provide clear instructions and training on how to safely inspect and maintain battery-powered hand tools. 	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			<ul style="list-style-type: none"> - Store incompatible or different types of batteries separately to prevent accidental mixing. - Ensure tools have operating manuals available and accessible for proper usage guidelines. - Encourage reporting of any tool irregularities or incidents to supervisors promptly. - Verify that only compatible chargers and batteries are used together to avoid mismatched configurations. - Perform routine checks using a checklist to standardise inspection procedures. 	
3. Site Assessment	Uneven surfaces, poor lighting	3H	<ul style="list-style-type: none"> - Conduct a pre-work inspection to identify and mark uneven surfaces that may pose trip hazards. - Utilise portable lighting or headlamps to enhance visibility in areas with poor lighting conditions. - Implement barriers or warning signs around hazardous uneven surfaces to prevent access. - Ensure workers have appropriate footwear with non-slip soles for increased stability on uneven terrain. - Schedule work during daylight hours where possible to utilise natural light. - Verify that electrical cords and equipment do not create additional trip hazards on uneven surfaces. - Provide training to workers on recognising and navigating uneven surfaces safely. - Adjust work schedules to avoid operations in low-light conditions unless adequate lighting is provided. - Use visual aids such as reflective tape or markers to highlight potential trip risks in low light or dim areas. - Equip workers with handheld lights for tasks requiring illumination in poorly lit environments. - Rotate workforce tasks to minimise the amount of time spent working in challenging terrain conditions. - Conduct regular safety meetings to discuss and reinforce awareness about potential hazards from uneven surfaces and inadequate lighting. 	2M
4. PPE Check	Inadequate PPE, non-compliance with regulations	3H	<ul style="list-style-type: none"> - [REDACTED] - [REDACTED] - [REDACTED] - [REDACTED] - [REDACTED] - [REDACTED] - [REDACTED] - [REDACTED] - [REDACTED] 	2M

20. Follow-up Actions	Delayed response to identified issues, failure to reassess risk factors	3H		1L

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review must be carried out in consultation with workers (including contractors and sub-contractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	<input checked="" type="checkbox"/>	
All relevant personnel consulted during the development of the SWMS.	<input checked="" type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input checked="" type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input checked="" type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input checked="" type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input checked="" type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input checked="" type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	<input checked="" type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input checked="" type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input checked="" type="checkbox"/>	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input checked="" type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input checked="" type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input checked="" type="checkbox"/>	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	<input checked="" type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input checked="" type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input checked="" type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input checked="" type="checkbox"/>
