Battery Safety | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Battery Safety

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-bearing.	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrity of a structure.	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing asbestos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that requires temporary support to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -	

RISK MATRIX

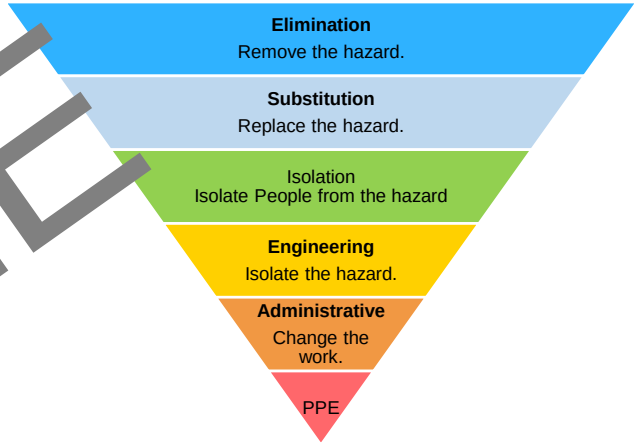
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Falls from heights, Manual handling injuries	2M	- Conduct a thorough risk assessment before commencing work to identify potential hazards and establish appropriate control measures. - Ensure that workers are properly trained in manual handling techniques and are aware of the correct procedures for lifting, carrying, and moving batteries. - Provide appropriate personal protective equipment (PPE) for workers, such as gloves, safety footwear, and back support belts if necessary. - Establish clear exclusion zones around the work area to prevent unauthorised access and reduce the risk of falls from heights. - Utilise mechanical aids such as trolleys or hoists, whenever possible to assist with the movement and handling of batteries to minimise manual handling risks. - Implement a strict 'no lone working' policy for tasks involving working at height, ensuring that team members always have assistance and supervision when necessary. - Establish designated walkways and ensure these are kept free of obstructions to minimise trip hazards and maintain a safe working environment. - Implement regular inspection and maintenance schedules for equipment used in battery handling, such as ladders, scaffolding, and harnesses, to ensure their safe operation and reliability. - Encourage open communication between team members, allowing workers to report any concerns regarding falls from heights or manual handling injuries promptly without fear of reprisal. - Maintain accurate records of all workplace incidents involving falls or manual handling injuries, analysing trends and implementing corrective actions to continuously improve workplace health and safety practices. - Regularly review and revise the SWMS to ensure relevance and effectiveness, incorporating new technologies, best practices, or legislative changes as necessary to optimise battery safety in the workplace.	1L	
2. Battery Transportation	Battery leaks, Heavy lifting injury	3H	- Ensure that all batteries are appropriately packaged in accordance with the manufacturer's recommendations and relevant safety standards, including materials to absorb any potential leaks or spills. - Securely fasten battery packages in the transport vehicle to prevent movement during transit, minimising the risk of damage, leakage or spillage. - Train personnel involved in battery transportation on the proper handling techniques, including lifting heavy batteries using correct body mechanics to reduce the risk of injury. - Use mechanical lifting aids such as forklifts, carts, or trolleys to handle larger, heavier batteries, minimising the risk of manual injuries during loading and unloading.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Provide necessary personal protective equipment (PPE) to workers, including gloves, safety goggles, and appropriate footwear to protect against potential exposure to hazardous materials or heavy lifting injuri - Clearly label all battery packages with indicati of the hazard posed by their contents, ensuring relevant handling precauti s are communicated to transport personnel. - Regularly inspect delivery vehicles for signs d a or damage before transporting batteries, addressing any issues promptly to ma in a high st ard of safety during transit. - Maintain communicati amon ansport personne oughout the journey, with regular check-ins ensu timely tification and response to any potential incidents that occur du g tran rtation. - Prepare a co ngency pl for respo g to emergencies during battery trans ation, s h as aks or spills, including guidelines for containment, cleanup, and d al of ha ous materials. - Limit e ti batter s are stored in a transport vehicle, particularly in extreme tempera res reduc he risk of battery leaks or other temperature-related azards. - Im e t no-smoking policies and enforce prohibition of open flames near battery ansport n areas to minimise the possibility of ignition of leaked battery fluids or ses. - E sure transport personnel are knowledgeable about the appropriate weight estrictions and capacities for their mode of transportation to avoid overloading and creating additional risks during battery transportation. - Routinely evaluate and refine transportation procedures to identify areas for improvement and continuously enhance the overall safety of battery transportation operations. - Consider conducting internal audits or engaging third-party inspectors to review battery transportation practices, ensuring compliance with workplace health and safety regulations and identifying any potential areas for improvement.		
3. Battery Inspection	Exposure to battery acid, Electrical shock	3H	- Proper training: Ensure that all workers handling and inspecting the batteries are adequately trained on safe battery handling procedures, potential hazards, and emergency response. - Personal Protective Equipment (PPE): Provide suitable PPE such as gloves, safety glasses, and face shields to prevent exposure to battery acid and minimise the risk of electrical shock. - Insulated tools: Use non-conductive or insulated tools when working with or around batteries to reduce the risk of electrical shock.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Regular inspections: Conduct periodic inspections of batteries for leakage, corrosion, and damage to ensure early detection of issues and prompt corrective actions. - Battery isolation: When possible, isolate the power supply or disconnect the battery terminals before inspection, reducing the chance of electrical discharge during the process. - Safety signage: In addition to proper labeling of batteries, display clear and visible warning signs about electrical hazards and battery acid in the work area. - Ventilation: Ensure good ventilation in the battery storage and inspection areas to avoid the buildup of potentially hazardous gases. - Securely store batteries: All batteries should be securely stored in designated areas, preventing any accidental damages or spillages during inspection. - Spill containment: Have spill containment materials readily available in case of a battery acid leak or spill, enabling quick and effective clean-up. - Emergency eye-wash station: Install an emergency eye-wash station near the work area for immediate access in case of accidental exposure to battery acid. - First-aid kit: Maintain a fully stocked first-aid kit on site, ensuring it includes appropriate treatment supplies for chemical burns and electrical injuries. - Safe disposal practices: Promptly dispose of damaged or leaking batteries according to local regulations and guidelines to reduce the risk of exposure to hazardous substances. - Communications plan: Develop and implement a clear communication plan for workers to raise concerns about battery-related hazards and request assistance if needed. - Conduct regular reviews and updates: Periodically review and update the SWMS to include new guidelines, industry best practices, and lessons learned from previous incidents. This ensures that control measures remain up-to-date and effective in managing risks associated with battery inspection tasks.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
