Boom Lift | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Boom Lift

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-be	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrit of a stru	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing as stos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that re mporar upp to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

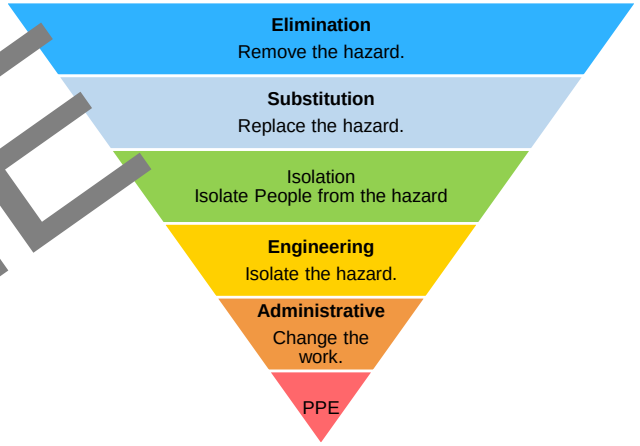
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip hazards, Falling objects	2M	- Ensure that the work area is clean and free of debris or obstructions that could cause trip hazards. - Clearly identify and mark all walkways, aisles, and emergency exits, and keep them clear to avoid trip incidents. - Conduct daily inspections of the work site to ensure it remains tidy, and clean up any spills or clutter promptly. - Provide appropriate signage in the work area, warning of potential trip hazards and instructing workers on proper procedures and precautions. - Educate and train personnel in recognizing and avoiding trip hazards, as well as proper use and maintenance of their personal protective equipment (PPE). - Require all personnel to wear proper footwear, such as non-slip shoes, to minimise the risk of slipping and tripping. - Use barriers and barricades around work areas to restrict access from unauthorised personnel, reducing the risks associated with falling objects. - Inspect and maintain boom lift equipment to ensure it is functioning correctly and safely, reducing the likelihood of an incident leading to falling objects. - Implement a tool tethering system to secure tools and equipment while working at height, preventing them from accidentally falling and causing injury. - Arrange materials storage so that heavier items are stored at lower levels, limiting the potential for falling objects from higher shelves. - Provide appropriate PPE, including hard hats, for all employees involved in the project, to protect them from falling objects. - Establish and enforce a robust communication system between team members when working on tasks that involve lifting or moving heavy objects, ensuring awareness of potential hazards and coordinating efforts effectively. - Regularly review and update the SWMS to address any changes in the work environment or tasks being completed, ensuring that control measures remain relevant and effective.	1L	
2. Pre-Start Inspection	Electrical hazards, Crush hazards	3H	- Conduct a thorough visual inspection of the boom lift and its components, including electrical cables and connections, ensuring that they are free from damage, wear, and defects. - Check for proper grounding of the boom lift's electrical system, making certain that all connections are secure and without corrosion or signs of deterioration. - Operate warning devices such as flashing lights, horns, and alarms to ensure they are functioning correctly, alerting workers in the vicinity of the boom lift's movements and minimising the risk of potential crush hazards.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Briefly review the operator's manual for specific pre-start inspection procedures unique to the boom lift being used, taking note of any additional safety precautions that may be required. - Confirm that the ground beneath the boom lift is level, stable, and free from obstructions, reducing the risk of tipping or overturning hazards due to uneven terrain. - Inspect all safety guards, gate mechanisms, barriers, and other protective features on the boom lift for proper functioning and condition, ensuring that they effectively prevent unauthorised access and accidental entanglement. - Test the boom lift's operational controls, including driving and lifting functionalities, and ensure that they respond as expected and do not present any obvious malfunctions or issues. - Examine the surrounding work area for any overhead electrical hazards, such as power lines or high-voltage equipment, and maintain a safe clearance distance at all times during boom lift operation. - Ensure all workers in the vicinity of the boom lift are made aware of their responsibilities, safe work practices, and emergency procedures in case of an incident involving electrical or crush hazards. - Establish clear communication channels between the boom lift operator and other workers on site, using either two-way radios or established hand signals, to coordinate movements and avoid potential collisions and crush risks.		
3. Moving Boom Lift	Collision with objects, Collision with people	3H	- Ensure that a pre-start safety check is conducted on the boom lift daily by competent personnel to identify any defects, ensuring that corrective actions are taken promptly. - Provide comprehensive training and certification in the operation of the boom lift for all personnel who will be operating it, ensuring that they have the necessary skills and knowledge to avoid accidents. - Clearly mark designated travel paths for the movement of the boom lift on site, and regularly check them for obstructions or potential hazards. - Implement an effective communication system between the boom lift operator and ground personnel, using equipment such as two-way radios, hand signals, or whistles to alert others to the lift's movements. - Establish a speed limit for boom lifts within the site, ensuring that it is adhered to at all times while moving. - Use spotters or traffic controllers to guide the boom lift around the work site, particularly when navigating through tight spaces or areas with restricted visibility. - Equip the boom lift with warning devices, such as flashing lights or audible alarms, to alert workers and bystanders of its presence and movements. - Maintain a safe distance between the boom lift and other moving equipment or vehicles to prevent collisions.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Regularly review and update the method of operation, risk assessments, and SWMS related to the operation of boom lifts to ensure compliance with current industry guidelines and standards. - Conduct toolbox talks and safety briefings to raise awareness on the risk associated with moving boom lifts and reinforce the importance of adhering to the control measures in place. - Encourage all employees to report any unsafe conditions or practices immediately and ensure that an appropriate response is carried out to rectify the situation. - Designate restricted access areas where only trained and authorised boom lift operators can enter, ensuring that proper barricades and signage are in place to minimise the risk of injury to pedestrians or other personnel. - Continuously monitor the work environment and stop boom lift movement immediately if any hazardous conditions are identified, allowing for the situation to be resolved before resuming operations.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us[illegible].	☐	☐	
Details of inspection checks required for any equipment listed ar[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
