

Brick And Block Laying | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Brick And Block Laying

| | | |
|-------------------|--------|--------|
| Business Name: | ABN: | SWMS# |
| Business Address: | | |
| Contact Person: | Phone: | Email: |

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

| |
|------------|
| Full Name: |
|------------|

| | | |
|------------|--------|-------|
| Signature: | Title: | Date: |
|------------|--------|-------|

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

| | | |
|------------|--------|--------|
| Full Name: | Title: | Phone: |
|------------|--------|--------|

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

CLIENT OR PRINCIPAL CONTRACTOR DETAILS

| Date SWMS supplied to Project Manager: | |

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

| | |
|--|--|
| <input type="checkbox"/> involves a risk of a person falling more than 2 meters | <input type="checkbox"/> is carried out on or near pressurised gas mains or piping |
| <input type="checkbox"/> is carried out on a telecommunication tower | <input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines |
| <input type="checkbox"/> involves demolition of an element of a structure that is load-bearing | <input type="checkbox"/> is carried out on or near energised electrical installations or services |
| <input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure | <input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere |
| <input type="checkbox"/> involves, or is likely to involve, disturbing asbestos | <input type="checkbox"/> involves tilt-up or precast concrete |
| <input type="checkbox"/> involves structural alteration or repair that requires temporary support to prevent collapse | <input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor |
| <input type="checkbox"/> is carried out in or near a confined space | <input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant |
| <input type="checkbox"/> is carried out in/near a shaft or trench deeper than 2m or tunnel involving use of explosives | <input type="checkbox"/> is carried out in areas with artificial extremes of temperature. |
| <input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning. | <input type="checkbox"/> involves diving work. |

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

| LIKELIHOOD | INSIGNIFICANT | MINOR | MODERATE | MAJOR | CATASTROPHIC | SCORE | ACTION | HEIRARCHY OF CONTROLS |
|---|---------------|---------------|---------------|------------|--------------|----------------|-----------------------------------|--|
| ALMOST CERTAIN | 3 HIGH | 3 HIGH | 4 ACUTE | 4 ACUTE | 4 ACUTE | | | Elimination Remove the hazard. |
| LIKELY | 2 MODERATE | 3 HIGH | 3 HIGH | 4 ACUTE | 4 ACUTE | 4A ACUTE | DO NOT PROCEED | Substitution Replace the hazard. |
| POSSIBLE | 1 LOW | 2 MODERATE | 3 HIGH | 4 ACUTE | 4 ACUTE | 3H HIGH | Review before work starts. | Isolation Isolate People from the hazard |
| UNLIKELY | 1 LOW | 1 LOW | 2 MODERATE | 3 HIGH | 4 ACUTE | 2M MODERATE | Ensure control measures in place. | Engineering Isolate the hazard. |
| RARE | 1 LOW | 1 LOW | 2 MODERATE | 3 HIGH | 3 HIGH | 1L LOW | Monitor and keep records | Administrative Change the work. |
| Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method. | | | | | | | | PPE |

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

| FOOT PROTECTION | HAND PROTECTION | HEAD PROTECTION | HEARING PROTECTION | EYE PROTECTION | RESPIRATORY PROTECTION | FACE PROTECTION | HIGH-VIS CLOTHING | PROTECTIVE CLOTHING | FALL PROTECTION | SUN PROTECTION | HAIR/JEWELLERY SECURED |
|--|--|--|--|--|---|--|--|--|--|--|--|
|  |  |  |  |  |  |  |  |  |  |  |  |
| <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

Other PPE Required:

Permit or Licenses Requirements

Mandatory Qualifications and Training

| JOB STEP | POTENTIAL HAZARDS | IR | CONTROL MEASURES | RR |
|-------------------------|--|--------------|---|---------------|
| SPECIFIC WORK STEPS | HAZARDS THAT MAY ARISE | INITIAL RISK | SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS | RESIDUAL RISK |
| 1. Preparation | Incorrect lifting techniques, Slip and falls | 2M | <ul style="list-style-type: none"> - Ensure all workers have received proper training on correct manual handling techniques to prevent injuries from incorrect lifting. - Establish a procedure for regular inspection and maintenance of the work area to keep it free from obstruction, slippery substances, and tripping hazards. - Require the use of personal protective equipment (PPE) like gloves, safety boots, and high visibility clothing to minimise mechanical injury risks. - Reinforce the importance of three points-of-contact rule when ascending or descending ladders or stairs to reduce fall risk. - Limit pedestrian access into the work area and mark hazardous areas clearly with warning signs to prevent unintended trips or falls. - Clean up spills immediately and where necessary, use absorbent material to completely dry up the area - thus preventing slip and fall accidents. - Enforce strict adherence to safe systems of work as demonstrated during job induction and toolbox meetings. - Provide step stools, raised platforms or secure ladders for tasks that cannot be done from ground level to mitigate risk of falls. - Use mechanical aids like trolleys or wheelbarrows whenever possible to move heavy blocks or materials around the site - reducing the need for manual lifting. - Encourage frequent breaks to reduce fatigue which could lead to accidents due to inattentiveness or reduced coordination. - Implement a buddy system for lifting very heavy items. This requires teamwork to ensure there is ample support for every lift - hence minimising the risk caused by incorrect lifting techniques. | 1L |
| 2. Delivery of Material | Traffic incidents, Overloading | 3H | <ul style="list-style-type: none"> - Organise a well-coordinated delivery schedule to avoid peak traffic times and minimise the risk of traffic incidents. - Ensure all drivers are appropriately licenced, trained, and understand their route fully. - Utilise high visibility clothing and safety gears for drivers and workers involved in the delivery process. - Regularly maintain and service delivery vehicles to ensure they are mechanically sound and reliable. - Enforce strict rules on speed limits and driving behaviours to reduce the likelihood of traffic incidents. - Allocate designated unloading zones within the worksite to minimise disruption to regular traffic. - Pre-plan the route considering road conditions, height restrictions, weight restrictions, clearance etc. - Use traffic control devices or personnel when required to better manage inflow and outflow of material. | 1L |

| JOB STEP | POTENTIAL HAZARDS | IR | CONTROL MEASURES | RR |
|---------------------|---------------------------------------|--------------|--|---------------|
| SPECIFIC WORK STEPS | HAZARDS THAT MAY ARISE | INITIAL RISK | SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS | RESIDUAL RISK |
| | | | <ul style="list-style-type: none"> - Enforce strict load management policies - only safe and suitable material quantities should be loaded onto the vehicle at once. - Train workers on understanding the load capacity of vehicles to prevent overloading. - Conduct regular checks on materials loaded onto vehicles before departure, checking for any signs of overloading. - Establish clear communication channels between delivery teams and site supervisors to instantly report and rectify any potentially unsafe incident. - Provide frequent breaks for drivers during long-distance delivery trips to ensure they remain alert and help reduce the risk of traffic incidents. - Adhere strictly to all relevant transport laws, regulations and standards regarding weight limits and cargo securement. | |
| 3. Setting Out | Falling from heights, Exposure to sun | 2M | <ul style="list-style-type: none"> - Utilise suitable fall prevention measures such as temporary edge protection, scaffolding or elevated work platforms when working at heights. - Ensure that steps and ladders are secured and placed on a stable surface to prevent slipping or falling. - Provide training for employees regarding safety procedures when working at heights. - Use of Personal Protective Equipment (PPE), such as helmets, grip gloves, safety boots and harnesses, especially when working from heights. - Encourage regular breaks and provide a shaded area for rest to avoid continuous exposure to the sun. - Supply all workers with high SPF sunblock and ensure it's applied regularly during the day. - Have heat stress management strategies in place, including supplying fresh drinking water at all times. - Implement regular risk assessments to determine if the work environment or tasks are causing any unhandled hazardous situations. - Develop an emergency rescue plan in case of falls from heights, ensuring that the required equipment is readily available. - Regularly maintain and check all tools and equipment for faults to ensure they are safe for use. - All brick layers should wear long sleeves, long pants and wide-brimmed hats to reduce exposure to the sun. - Provide training and information to workers about the dangers of UV radiation and ways to protect oneself. - Use mechanical aids or team lifting strategies for handling heavy blocks to prevent strain injuries. - Control access to areas where people could fall to ensure only competent persons who have received the necessary training can enter. | 1L |
| 4. Mixing Mortar | Dust inhalation, Inadequate PPE usage | 2M | | 1L |

| JOB STEP | POTENTIAL HAZARDS | IR | CONTROL MEASURES | RR |

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

| Worker Name | Signature | Date |

| | | |
| | | |
| | | |
| | | |

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review must be carried out in consultation with workers (including contractors and sub-contractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

| ITEMS WHICH MUST BE INCLUDED IN THE SWMS | COMPLETED | COMMENTS |
|--|-------------------------------------|----------|
| The company details have been entered, including the project name and address. | <input checked="" type="checkbox"/> | |
| All relevant personnel consulted during the development of the SWMS. | <input checked="" type="checkbox"/> | |
| Name, signature, position and date signed of the person approving the SWMS. | <input type="checkbox"/> | |
| Specific personnel and qualifications, experience is noted in the SWMS. | <input checked="" type="checkbox"/> | |
| Provides a step-by-step process of tasks required to carry out the activity or task. | <input checked="" type="checkbox"/> | |
| Adequate risk assessment of any identified hazards has been completed. | <input checked="" type="checkbox"/> | |
| Foreseeable hazards are identified and documented for each step. | <input checked="" type="checkbox"/> | |
| Any hazards listed in any site risk assessments have been added to the SWMS. | <input checked="" type="checkbox"/> | |
| SWMS initial risk (IR) column as well as residual risk (RR) column completed. | <input checked="" type="checkbox"/> | |
| Check control measures added to the SWMS are the most effective solutions. | <input checked="" type="checkbox"/> | |
| Responsible person is assigned and listed on the SWMS for the implementation of control measures. | <input checked="" type="checkbox"/> | |
| Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc. | <input checked="" type="checkbox"/> | |
| SWMS identifies plant and equipment to be used. | <input checked="" type="checkbox"/> | |
| Details of inspection checks required for any equipment listed are noted on the SWMS. | <input checked="" type="checkbox"/> | |
| Describes any mandatory qualifications, experience, training or skills required to perform the work. | <input checked="" type="checkbox"/> | |
| Applicable personal protective equipment is selected on the SWMS. | <input checked="" type="checkbox"/> | |
| Reflects and documents any legislative references and/or Australian Standards. | <input checked="" type="checkbox"/> | |
| Identifies any hazardous substances used with specific control measures in line with any SDS. | <input checked="" type="checkbox"/> | |
