Brick Hampton Extruder | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Brick Hampton Extruder

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:

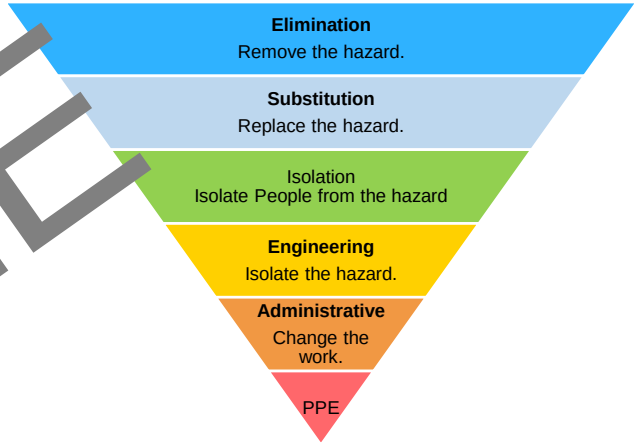
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Slips, trips and falls, Manual handling injuries	2M	- Clearly mark walkways and areas around the workspace to maintain proper traffic flow and prevent congestion. - Provide appropriate lighting for the workspace, ensuring all areas are well-lit for safe movement and visibility. - Regularly inspect the work area for potential hazards, such as uneven flooring or trailing cords, and promptly address any issues. - Keep the work area free of unnecessary materials, tools, and debris to minimise the risk of slips, trips, and falls. - Provide suitable non-slip footwear for employees to wear during the job, supporting safe and stable ground contact. - Train staff in correct manual handling techniques, including lifting, carrying, and moving heavy objects safely. - Use mechanical aids, such as trolleys, hand trucks, or hoists, to assist with moving heavy materials and equipment whenever possible. - Encourage workers to regularly stretch and change positions while performing tasks, to reduce strain on muscles and joints. - Ensure that workers have access to properly maintained ladders, platforms, and step stools for reaching elevated areas safely. - Promote a clean and organised workspace, with designated storage locations for tools and equipment, as this reduces the risk of tripping over misplaced items. - Provide personal protective equipment (PPE) such as gloves and knee pads to mitigate the risk of injury from handling rough or sharp materials. - Establish clear communication channels among team members, so they can quickly alert one another of potential hazards, spills, or obstructions. - Implement an effective procedure for reporting and addressing workplace incidents, regardless of severity, encouraging prompt action to minimise risks. - Offer regular refresher training sessions on workplace health and safety practices, keeping staff up-to-date on best practices for maintaining a safe work environment.	1L	
2. Machine Setup	Entanglement, Electrical hazards	2M	- Ensure all workers have received appropriate training and are competent in the machine setup process to minimise the risk of entanglement and electrical hazards. - Establish and maintain a safe working zone around the Brick Hampton Extruder machine, using barriers and signage to keep unauthorised personnel from entering the area. - Inspect the machine regularly for any loose or damaged parts, paying particular attention to entanglement and electrical hazards. Repair or replace any faulty components before starting the setup process.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Always disconnect and lockout the power source during machine setup to avoid unexpected startup, accidental movement, or electric shock. - Provide and enforce the use of appropriate personal protective equipment (PPE) such as gloves, safety glasses, and steel-toed boots for workers during the setup process. - Clearly mark and label all power switches, control panels, and emergency shut-off buttons to quickly identify them in case of an emergency. - Implement a clear communication system between workers to ensure everyone is aware of each step during the machine setup process, reducing the risk of accidents. - Implement regular toolbox talks and safety briefings to remind workers of the potential hazards related to the Brick Hampton Extruder machine setup and inform them of any updates or changes to procedures. - Develop and provide a detailed Standard Work Method Statement (SWMS) outlining the proper procedures for setting up the Brick Hampton Extruder, ensuring that each worker follows the guideline and takes necessary precautions against potential hazards. - Regularly review and update the SWMS as required, incorporating new industry developments, technology advancements, or identified risks from incident reports and workplace observations. - Encourage a proactive safety culture by providing an open-door policy for workers to report any concerns, near misses or incidents relating to the Brick Hampton Extruder machine setup, ensuring these occurrences are investigated promptly and appropriate preventative measures are put in place.		
3. Material Loading	Manual handling injuries, Flying debris	2M	- Conduct a pre-work risk assessment to identify potential hazards and establish appropriate control measures before starting the Material Loading phase. - Ensure that workers have received proper training in manual handling techniques, including the correct lifting, lowering, pushing, and pulling methods to minimise the risk of injuries. - Provide appropriate personal protective equipment (PPE) such as gloves, safety goggles, and high-visibility clothing to protect workers from flying debris and other potential hazards during material loading. - Implement a rotating work system to minimise repetitive strain and prevent sustained periods of manual handling tasks for individual workers. - Use mechanical aids, such as forklifts, trolleys, or conveyor belts, where possible to assist with material handling and reduce the physical strain on workers. - Regularly inspect workstations and tools to ensure that they are well-maintained, clean, and safe for use during the Material Loading process. - Keep the workplace clean and orderly to minimise tripping hazards and enable easy access to materials and equipment.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Clearly communicate any changes in the Material Loading process to all workers, ensuring they are aware of any new hazards and how to mitigate them. - Establish emergency procedures and clearly displ evacuation plans at strategic locations throughout the workspace in the event an accident or unexpected hazard. - Limit the amount of material loaded onto ea worke task, ensuring this remains within their capacity and ability, reducing the li d of injury from overloading. - Encourage workers to take ular breaks, stret g their li s and changing their posture to combat fatigue and crease the likeliho of i ries. - Monitor the Materi g are closely during the course of work, being quick to address any ha dous situ ions c ehaviours at may arise. - Regularly re w and upd e Safety rkshops, Material Handling Trainings, and Toolbo Talks t provide ngoing educa on for workers and maintain a strong safety cultur hin the lace.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
