Bulldozer | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Bulldozer

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-be	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrit of a stru	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing as stos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that re mporar upp to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -	

RISK MATRIX

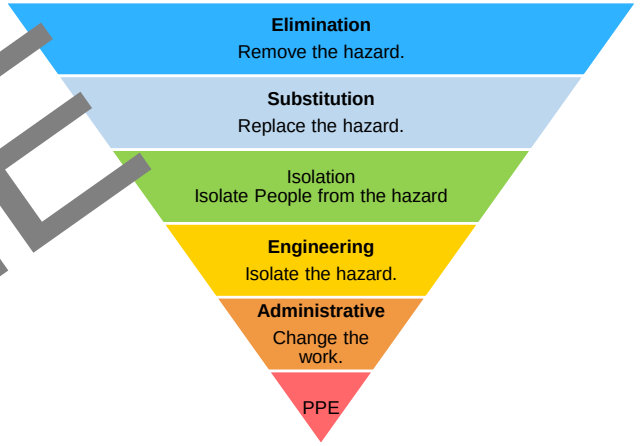
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Slips, trips and falls, Overhead powerlines	2M	- Conduct a thorough site inspection prior to beginning work, identifying potential hazards such as uneven surfaces and debris that may cause slips, trips, and falls. - Clearly mark identified hazards with appropriate signage and ensure all employees are informed of their location. - Utilise temporary barriers or fencing to cordon off hazardous areas and slopes that pose a risk of slipping or tripping. - Ensure walkways and work areas are free of clutter, debris, and spills to minimise the likelihood of accidents. - Provide appropriate personal protective equipment (PPE) for employees, such as slip-resistant footwear and hard hats to reduce the risk of injury from slips, trips, and falls. - Train employees in safe working practices, including correct lifting techniques to avoid overreaching and tripping hazards. - Regularly check the environment for changing conditions, such as wet or slippery surfaces, and implement additional control measures if necessary. - Develop and enforce safety procedures for mounting and dismounting the bulldozer to prevent slips, trips, and falls. - Identify the location of overhead powerlines at the worksite during the initial site assessment and inform workers about clearances and exclusion zones. - Implement shielding devices, such as insulated covers or barriers, to protect workers from accidental contact with overhead powerlines. - Maintain a minimum safe distance between the bulldozer and overhead powerlines, adhering to guidelines set by appropriate regulatory bodies. - Establish safety protocols for raising and lowering the bulldozer blade near overhead powerlines to avoid accidental contact. - In situations where work must be conducted near powerlines, liaise with the electricity provider to de-energise and isolate the lines if possible, ensuring a safer working environment for all employees.	1L	
2. Site Inspection	Uneven terrain, Buried services	3H	- Conduct a thorough site inspection prior to the commencement of work, identifying any uneven terrain and potential risks associated with it. - Consult site plans and utility drawings to identify the location of buried services on the worksite, such as gas lines, water pipes, or electrical cables. - Clearly mark identified locations of buried services with appropriate signage and safety barriers to minimise disruptions and vehicle conflicts during bulldozer operations.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Provide comprehensive training for all bulldozer operators on how to safely navigate and manoeuvre the machinery on uneven terrain, including familiarisation with the equipment's stability and capabilities. - Ensure that all bulldozer operators hold valid licences and have undergone appropriate competency assessments in accordance with Australian regulations and standards. - Employ a spotter during bulldozer operations who can provide guidance and assistance when approaching or working around areas with uneven terrain and buried services. - Establish exclusion zones around any detected services to prevent accidental damage and restrict access to only essential personnel involved in the repair or maintenance processes. - Regularly inspect and maintain all equipment to ensure it is functioning correctly and meeting safety standards, paying particular attention to suspension systems and tyre pressure levels. - Implement a traffic management plan to control vehicle movement on the worksite, ensuring that dedicated routes are established around identified hazards and limiting speeds accordingly. - Assess weather conditions and reassess the work environment periodically, postponing work if heavy rain, strong winds, or poor visibility increases the risks related to uneven terrain and buried services. - Establish clear communication protocols amongst all personnel involved in the work process, effectively relaying information about identified hazards, work progress, and any changes to the working environment. - Provide ongoing education and regular toolbox talks regarding workplace health and safety practices, reinforcing the importance of adhering to established control measures and reporting any incidents or near-misses on site immediately.		
3. Pre-Operational Check	Maintenance hazards, Faulty equipment	3H	- Conduct a thorough visual inspection of the bulldozer, checking for any visible damage or maintenance issues that may pose as potential hazards. - Review and follow the manufacturer's guidelines for conducting pre-operational checks, ensuring all components are functioning correctly and within specifications. - Perform a routine maintenance check on the bulldozer prior to operation, replacing any worn or damaged parts as necessary. - Implement a preventative maintenance schedule in accordance with industry standards and manufacturer's recommendations to minimise the risk of equipment failure. - Check all fluid levels, including engine oil, coolant, and hydraulic fluid, as part of the pre-operational inspection to ensure they are within appropriate limits.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Inspect and test all safety devices on the bulldozer, such as warning alarms and emergency shut-down systems, to confirm their correct functionality and reduce the risks associated with faulty equipment. - Ensure proper training and qualifications are held by operators, focusing specifically on safe operation, hazard identification, and control measures for the specific bulldozer model in use. - Clearly communicate any identified hazards or maintenance issues with relevant team members and supervisors, implementing additional control measures to address these concerns as required. - Verify tyre conditions, including pressure, wear, and overall quality, to ensure optimal performance and reduce the likelihood of accidents associated with deteriorating tyres. - Regularly review and update Safe Work Method Statements (SWMS) to reflect current best practices and incorporate any new hazard mitigation techniques, ensuring all operators are familiar with the contents of the document. - Implement a systematic reporting system for any defects or maintenance concerns identified during pre-operational checks, allowing for prompt rectification and minimising the impact on the work environment.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐
