

Clearance Of Vegetation Near Dams And Other Water Storage Facilities. | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Clearance Of Vegetation Near Dams And Other Water Storage Facilities.

Business Name:	ABN:	SWMS#
Business Address:		
Contact Person:	Phone:	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:	Title:	Date:
------------	--------	-------

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:
------------	--------	--------

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

<input type="checkbox"/> involves a risk of a person falling more than 2 meters	<input type="checkbox"/> is carried out on or near pressurised gas mains or piping
<input type="checkbox"/> is carried out on a telecommunication tower	<input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines
<input type="checkbox"/> involves demolition of an element of a structure that is load-bearing	<input type="checkbox"/> is carried out on or near energised electrical installations or services
<input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure	<input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere
<input type="checkbox"/> involves, or is likely to involve, disturbing asbestos	<input type="checkbox"/> involves tilt-up or precast concrete
<input type="checkbox"/> involves structural alteration or repair that requires temporary support to prevent collapse	<input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor
<input type="checkbox"/> is carried out in or near a confined space	<input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant
<input type="checkbox"/> is carried out in/near a shaft or trench deeper than 2m or tunnel involving use of explosives	<input type="checkbox"/> is carried out in areas with artificial extremes of temperature.
<input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning.	<input type="checkbox"/> involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work.
Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.								PPE

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Uneven ground, risky weather conditions, poorly maintained equipment.	2M	<ul style="list-style-type: none"> - Conduct a site assessment to identify uneven ground and mark hazardous areas with high-visibility tape or signage. - Provide training for all workers on recognising and navigating uneven terrain safely. - Equip workers with appropriate footwear that offers good traction and ankle support to prevent slips and falls. - Develop an emergency response plan specifically for injuries caused by navigation on uneven ground. - Monitor weather forecasts closely and delay work during severe conditions like heavy rain, strong winds, or extreme temperatures. - Ensure all machinery is regularly maintained and inspected prior to use to prevent breakdowns and accidents. - Require operators to perform pre-start checks of all equipment to ensure they are in safe working order. - Use equipment with stability features designed for uneven terrain to minimise the risk of tipping. - Provide personal protective equipment (PPE) such as hard hats, gloves, and high-visibility vests to protect workers from falling debris and vehicle collisions. - Establish clear communication protocols using radios or mobile devices, especially in remote or expansive work areas. - Schedule regular breaks and hydration stops to prevent fatigue, particularly in harsh weather conditions. - Implement a buddy system so that workers are paired together to enhance situational awareness and rapid response to incidents. 	1L
2. Equipment Check	Equipment malfunction, lack of personal protective gear.	3H	<ul style="list-style-type: none"> - Conduct regular maintenance and servicing of equipment to ensure proper functioning before use. - Inspect equipment for visible defects or signs of wear and tear prior to commencing work. - Ensure that all operators are trained and competent in the use of specific equipment required for vegetation clearance. - Implement a pre-start checklist that includes equipment checks and personal protective equipment (PPE) inspection. - Provide appropriate PPE, including gloves, helmets, high-visibility clothing, and eye protection, to all workers involved in the activity. - Ensure that PPE is regularly inspected for damage and replaced if necessary. - Follow manufacturer guidelines for equipment operation and maintenance. - Keep spare parts and necessary tools available for minor on-site repair work in case of equipment malfunction. - Develop and communicate an emergency protocol in case of equipment failure or accidents. 	1L

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			<ul style="list-style-type: none"> - Limit access to operational areas to authorised personnel only to minimise the risk of unauthorised use of equipment. - Incorporate the use of only purpose-built tools and equipment designed for working near water bodies. - Monitor environmental conditions and halt operations under adverse weather conditions that could affect equipment performance. - Establish a communication system among workers to report any equipment issues promptly for timely resolution. - Regularly audit safety practices and procedures to ensure compliance with current health and safety standards. 	
3. Area Marking	Tripping hazards, incorrect marking.	3H	<ul style="list-style-type: none"> - Conduct a pre-walk-through to identify and remove any potential tripping hazards before marking the area. - Use brightly coloured, highly visible markers or flags to clearly delineate the work area boundaries. - Train workers on proper area marking techniques and the importance of accurate marking to prevent errors. - Assign a designated person to oversee the marking process to ensure consistency and accuracy. - Maintain clear communication among team members during marking activities using radios or hand signals. - Regularly inspect existing markings to ensure they remain clear and visible throughout the duration of the project. - Utilise GPS or other technology tools to assist in precise boundary marking where applicable. - Provide appropriate personal protective equipment (PPE) such as high-visibility vests to ensure workers are easily seen. - Set up signage to inform others on-site about the marked operational zones and restricted access. - Establish and enforce safety protocols for any vehicular movement within or near the marked areas to reduce collision risks. 	2M
4. Vegetation identification	Incorrect identification, exposure to poisonous vegetation.	3H	<div></div> <div></div> <div></div> <div></div> <div></div>	2M

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review must be carried out in consultation with workers (including contractors and sub-contractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.
