Safety meetings or toolbox talks will be sched ed in according e with regislative requirements to first identify any site hazards, to continue to the those hazards and then to further take steps to either eliminate or con			
If an incident or a near miss occurs, all work must standardly. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Ensure that personal protective equipment (PPE), such as hard hats and steel-capped boots, is worn by all workers involved in the material delivery process.	
			- Schedule deliveries outside of peak construction durs, reducing the risk of accidents due to reduced workspace congestion.	
			- Regularly inspect delivery vehicles and exponent like sklifts for safety compliance before performing any operations.	
			- Enforce strict protocols around the stacking storage of materials to ensure they do not pose a hazard by becoming unstated and falling.	
			- Provide clear signage around alivery areas, warn potential hazards and outlining safe paths of movement around the same around a safe paths of movement around the same arou	
			- Conduct a postart safe coriefing to start workers about the specific hazards and control measures involved in set. Tup to construction set.	
			- Keep the work as a well-lit to reduce the risk of trips and falls, especially around the entrance of the cold-room the entrance of the cold-room terms of the	
			- Ensure all paways and surfaces are clear of debris, tools, and materials to prevent slipping or tripping sident	
	•	1	- Use the lip mats or apply anti-slip coatings on surfaces that are prone to becoming slippery when wet ricy.	
			- ange for regular inspections and maintenance of all machinery before and during use to ensure they are operating safely and efficiently.	
			- Implement a strict policy requiring the use of personal protective equipment (PPE) such as helmets, safety shoes, gloves, and eye protection.	
. Construction Setup	Slip and trip hazaro	3Н	- Train workers on the proper handling and operation of machinery, emphasizing the importance of following manufacturer's guidelines and safety protocols.	2M
			- Establish designated walkways and restrict access to areas where heavy machinery is used to minimize the risk of injury to personnel.	
			- Install physical barriers or guardrails around hazardous areas to prevent accidental entry and injuries.	
			- Develop an emergency response plan that includes procedures for dealing with incidents in the cold-room environment, ensuring all staff are familiar with it.	
			- Provide first aid kits and train selected staff in first aid to handle potential injuries promptly.	
			- Securely store tools and machinery when not in use to prevent unauthorised access and potential misuse.	
			- Display clear signage around the construction site detailing hazards and reminding workers of the safety practices to be followed.	
			- Encourage a culture of safety where workers feel empowered to report potential hazards and are proactive in addressing them.

#### **EMERGENCY RESPONSE - CALL 000 FOR EMERGENCIES**

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

#### SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

### SAFE WORK IN 'THE 'S' NTEMANT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remain effect, and must be reviewed (and revised if necessary) if relevant control measures are revised. The view as should be carried out in consultation with workers (including contractors as unputractors of the SWMS and their health and safety registeratives who represented that work group at the workplace.

When the SWMS has been revised the PCBD mest ensure the advised that a revision has been made and how they can accept the revised SWMS, including all persons who will need to change a work procedure or system as a rest of the review are advised of the changes in a way that will enable them to implement their duties the theoretical with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- Spot Checks.
- Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

### SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
TIEMS WHICH MOST BE INCLUDED IN THE SWINS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.		
All relevant personnel consulted during the development of the SWMS.		
Name, signature, position and date signed of the person approving the SWMS.		
Specific personnel and qualifications, experience is noted in the SWMS.		
Provides a step-by-step process of tasks required to carry out the activity or task.		
Adequate risk assessment of any identified hazards has been completed.	$\boxtimes$	
Foreseeable hazards are identified and documented for each step.		
Any hazards listed in any site risk assessments have been added to the SV 5.		
SWMS initial risk (IR) column as well as residual risk (RR) column ampleted.		
Check control measures added to the SWMS are the most effective sections.		
Responsible person is assigned and listed on the splenetation of control measures.		
Permit or licenses requirements specified, so in as Hot Work, Electrical Work, Work at Heights etc.		
SWMS identifies plant and equipment to be	$\boxtimes$	
Details of inspection checks required for any equipment lister are noted on the SWMS.		
Describes any mandatory qualifications, experience, and or skills required to perform the work.		
Applicable personal protective equipment is selected on the SWMS.		
Reflects and documents any legislative references and/or Australian Standards.		
Identifies any hazardous substances used with specific control measures in line with any SDS.
