

Computerised Cutter | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Computerised Cutter

Business Name: [Company Name]

ABN: [ABN]

SWMS#

Business Address: [Company Address]

Contact Person:

Phone: [Phone]

Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:

Title:

Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name:

Title:

Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

<input type="checkbox"/> involves a risk of a person falling more than 2 meters.	<input type="checkbox"/> is carried out on or near pressurised gas mains or piping.
<input type="checkbox"/> is carried out on a telecommunication tower.	<input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines.
<input type="checkbox"/> involves demolition of an element of a structure that is load-bearing.	<input type="checkbox"/> is carried out on or near energised electrical installations or services.
<input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure.	<input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere.
<input type="checkbox"/> involves, or is likely to involve, disturbing asbestos.	<input type="checkbox"/> involves tilt-up or precast concrete.
<input type="checkbox"/> involves structural alteration or repair that requires temporary support to prevent collapse.	<input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
<input type="checkbox"/> is carried out in or near a confined space.	<input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant.
<input type="checkbox"/> is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	<input type="checkbox"/> is carried out in areas with artificial extremes of temperature.
<input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning.	<input type="checkbox"/> involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

<input type="checkbox"/> Forklift	<input type="checkbox"/> Crane/s	<input type="checkbox"/> Hoist/s	<input type="checkbox"/> Excavator	<input type="checkbox"/> Backhoe/Loader	<input type="checkbox"/> Boom Lift	<input type="checkbox"/> EWP	<input type="checkbox"/> Genie Lift
<input type="checkbox"/> Trencher	<input type="checkbox"/> Drilling Rig	<input type="checkbox"/> Trucks	<input type="checkbox"/> Formwork	<input type="checkbox"/> Bobcat	<input type="checkbox"/> Flammable Gas	<input type="checkbox"/> Fuel	<input type="checkbox"/> Dozer
<input type="checkbox"/> High Voltage	<input type="checkbox"/> Mulcher	<input type="checkbox"/> Tilt-up Panels	<input type="checkbox"/> Roller	<input type="checkbox"/> Scissor Lift	<input type="checkbox"/> Tractor	<input type="checkbox"/> Other -	

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work. PPE

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Electric shock, Tripping hazards		<ul style="list-style-type: none"> - Regular equipment inspection: Ensure that the computerised cutter and its electrical components are regularly inspected and maintained by a qualified technician to prevent electric shocks. - Proper grounding: Make sure that the computerised cutter is correctly grounded, as per manufacturer guidelines, to avoid the risk of electric shock. - Circuit protection: Install residual current devices (RCDs) or circuit breakers to protect against potential electric shocks, in case of unexpected equipment failure or malfunction. - Use of personal protective equipment (PPE): Ensure that workers wear appropriate PPE, such as non-conductive gloves and safety shoes, when handling the computerised cutter to minimise the risk of electric shock. - Clear workspace: Keep the surrounding work area clean and free from clutter to reduce the likelihood of tripping hazards. - Cable management: Organise and secure cables with cable ties or cable organizers to prevent them from becoming tangled or lying loose on the floor, thus eliminating tripping hazards. - Warning and labeling: Place warning signs and labels around the workspace to remind employees to be cautious around the computerised cutter and take necessary precautions to avoid possible hazards. - Adequate lighting: Provide sufficient lighting in the work area so employees can identify and avoid any potential hazards while using the computerised cutter. - Proper training: Provide comprehensive training for staff on how to operate the computerised cutter safely, effectively, and according to manufacturer guidelines. - Emergency procedures: Establish clear emergency procedures and make sure all employees are familiar with them in case of an accident involving the computerised cutter. - Tools and equipment storage: Store all tools and equipment properly and securely when not in use. This helps minimise the risk of accidents and keeps the work area tidy, reducing tripping hazards. - Risk assessments: Conduct regular risk assessments to evaluate and update existing control measures for maximum effectiveness and identify new hazards that may arise during daily operations. - Communication and coordination: Encourage open communication and information-sharing among staff about potential hazards, incident reporting, and control measures to ensure consistent safety awareness and cooperation. - Incident monitoring and analysis: Closely monitor and analyse any accidents or near-misses that occur in the workspace involving the computerised cutter system. Use the findings to improve existing control measures and prevent similar incidents from happening again. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
2. Machine Set Up	Mechanical pinch points, Noise exposure	3H	<ul style="list-style-type: none"> - Ensure all operators have received proper training and are competent in setting up the computerized cutter before use, including knowledge of emergency stop procedures. - Inspect the machine for any visible damage or wear and tear prior to setup. If issues are identified, report them to the supervisor immediately and avoid using the equipment until it is repaired or replaced. - Prioritise lockout/tagout procedures during setup to eliminate the risk of unexpected machine start-up, potentially causing mechanical pinch-point injuries. - Keep hands and body clear from moving parts and pinch points during the machine set up process. Use appropriate tools and protective gloves if necessary to minimise direct contact with sharp components or blades. - Ensure that all safety guards and barriers are installed correctly and securely in place, protecting workers from mechanical hazards and inadvertent contact with moving parts. - Develop a clear communication system between employees involved in the set up and operation of the computerized cutter, to ensure each person knows their role and follows the work procedure safely. - Follow the manufacturer's guidelines on machine speed settings, material handling, and feed rates to prevent excessive cutting force, which could lead to mechanical failures and injury. - Utilise anti-vibration mounts or damping pads to reduce noise transmission and minimise noise exposure levels for workers operating the cutter and those nearby. - Require hearing protection equipment, such as earmuffs or earplugs, to be worn during machine installation and whenever noise levels exceed acceptable limits, as outlined by Australian Standards. - Schedule regular maintenance and inspections for the computerized cutter to ensure all components are functioning correctly and efficiently, minimising the risk of malfunction and noise generation. - Encourage workers to take periodic breaks away from the cutter during setup to reduce prolonged exposure to noise and other associated risks. - Constantly review and update the Safe Work Method Statement (SWMS) to account for newly identified hazards or changes in operation, ensuring that effective control measures are in place to protect the workers during machine set up. 	2M	
3. Material Handling	Manual lifting strains, Falling objects	2M	<ul style="list-style-type: none"> - Prioritise proper training: Ensure that all staff members involved in material handling are trained in correct lifting techniques, safe maneuvering of equipment, and appropriate methods for loading and unloading heavy objects. - Use mechanical aids when possible: Utilise appropriate lifting devices such as forklifts, pallet jacks, and hoists for handling heavy or oversized loads. This will reduce the potential for manual lifting strains. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Implement a buddy system: Encourage workers to assist one another while lifting especially heavy or awkward items to minimise strain and ensure proper communication. - Plan and prepare the work area: Clear pathways and designate appropriate loading zones to allow for smooth material handling without obstructions, decreasing the risk of falling objects or accidents. - Establish weight limits: Set a maximum limit for materials that can be manually lifted by workers, taking into account the object's size, shape, and the worker's physical capabilities. This will help mitigate manual lifting strains. - Keep work zones organised: Reduce clutter and maintain well-organised storage areas, ensuring that all materials are properly secured and stacked to prevent the risk of falling items. - Exercise proper posture: Inform workers of the importance of maintaining good posture while lifting and carrying heavy objects, including using their legs instead of their back for lifting and keeping the load close to the body to avoid strains. - Provide appropriate personal protective equipment (PPE): Supply workers with PPE like gloves, hard hats, and steel-toed shoes to protect them from injuries due to falling objects or during the lifting process. - Implement regular breaks and rotation of tasks: Encourage workers to take short breaks between tasks and rotate through different responsibilities to allow muscles time to rest and recover from heavy lifting. - Conduct ongoing hazard assessments and inspections: Regularly evaluate the workspace for any hazards related to material handling and make any necessary adjustments to minimise risk. - Create an open communication culture: Encourage workers to report any concerns or suggestions related to material handling practices, allowing for continuous improvement in workplace health and safety measures.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input type="checkbox"/>	<input type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input type="checkbox"/>	<input type="checkbox"/>	
Permit requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input type="checkbox"/>	<input type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Describes any mandatory qualifications, experience, training, skills required to perform the work.	<input type="checkbox"/>	<input type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Lists any required permits or licenses.	<input type="checkbox"/>	<input type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input type="checkbox"/>	<input type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input type="checkbox"/>	<input type="checkbox"/>
