Concrete Boom Pump | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Concrete Boom Pump

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-be	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrit of a stru	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing as stos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that re mporar upp to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

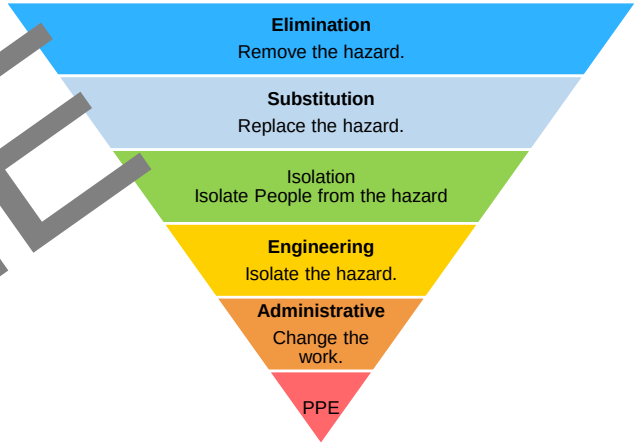
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip hazards, Incorrect PPE	2M	- Conduct a thorough risk assessment before commencing any work to identify and address trip hazards and other potential risks related to the concrete boom pump. - Mark and cover all cables, hoses, and obstructions in the area where the concrete boom pump is operating to minimise the risk of tripping. - Use appropriate signage and barriers to indicate areas with potential trip hazards, ensuring that clear pathways are maintained throughout the worksite. - Implement a housekeeping routine during work hours, ensuring that the workplace is kept clean and free from debris and spills that could cause trip hazards. - Instruct all workers on correct personal protective equipment (PPE) for the task, including safety boots with anti-slip soles, high visibility clothing, safety glasses, gloves, and hard hats. - Provide proper training and safety inductions for workers about the use of the concrete boom pump, including how to recognise potential risks and take precautions against trip hazards and accidents. - Establish an emergency response plan with clear procedures and designated personnel roles for dealing with any injuries, incidents, or accidents resulting from trip hazards or incorrect use of PPE. Regularly inspect and maintain the concrete boom pump and related equipment to ensure it is in safe working condition, scheduling repairs as necessary. - Implement a pre-start safety checklist for the concrete boom pump to verify that all safety procedures and equipment are in place before starting work on each shift. - Assign a competent person or supervisor to oversee the safe operation of the concrete boom pump and monitor compliance with established safety protocols throughout the workday. - Frequently communicate with workers about any changes in work conditions, new hazards, or updated safety measures to keep them informed and aware of potential trip hazards and necessary PPE requirements. - Encourage a positive safety culture in the workplace through regular meetings and open discussions to promote vigilance and awareness of trip hazards, the importance of wearing appropriate PPE, and the value of ongoing training and education in mitigating risks associated with operating a concrete boom pump.	1L	
2. Site assessment	Uneven ground, Overhead powerlines	3H	- Conduct a thorough site inspection before commencing work to identify any potential hazards, including uneven ground and the presence of overhead powerlines, and develop strategies to mitigate those risks. - Utilise a site-specific risk assessment and map out the working area, clearly marking any uneven ground or areas that are deemed unsafe for equipment setup and operation.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Implement measures such as compacting soil, using temporary platforms or providing adjustable outriggers on the concrete boom pump to ensure stability on uneven surfaces and reduce the risk of mishaps during operation. - Clearly mark and maintain safe distances from overhead powerlines according to local regulations and guidelines, ensuring that all workers are aware of the boundaries and do not engage in any activities that may encroach these "no-go zones". - Develop and enforce appropriate exclusion zones around the concrete boom pump where workers must not enter without permission, clearances taking into consideration the potential reach of the boom pump during operation so as to avoid contact with overhead powerlines. - Provide comprehensive training and information sessions for all workers involved in operating or working near the concrete boom pump, focusing specifically on hazard recognition and control measures associated with both uneven ground surfaces and overhead powerlines. - Regularly review and update site-specific safety procedures and monitor their implementation, making adjustments as necessary in response to changes in the working environment or emerging risks. - Require all workers to wear appropriate personal protective equipment (PPE) while on site, such as high-visibility vests and hard hats, to minimise the risk of accidents involving heavy machinery and obscured visibility. - Communicate effectively with utility companies to obtain accurate information about the location and voltage of overhead powerlines, enabling accurate planning and implementation of risk control measures. - Encourage an open culture of communication and reporting on site where workers feel comfortable raising concerns or identifying potential hazards related to uneven ground or overhead powerlines, allowing for ongoing risk management and continuous improvement in health and safety practices on the work site.		
3. Set up boom pump	Pinch points, Falling equipment	3H	- Inspect equipment: Prior to setting up the boom pump, conduct a thorough visual inspection to ensure all components are in proper working condition, including couplings, valves, and hoses. - Trained operators: Only authorised, trained, and competent individuals should handle the equipment during the setup process to reduce potential health and safety risks. - Establish exclusion zones: Set up barricades and demarcated areas around the work site to prevent unauthorised access and keep workers at a safe distance from pinch points and falling equipment hazards. - Use Personal Protective Equipment (PPE): Ensure that all personnel handling the boom pump are equipped with appropriate PPE, including gloves, hard hats, safety glasses, and steel-toed boots.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Implement communication protocol: Maintain clear and effective communication between the operator and ground crew during the entire setup process to stay informed of any potential hazards or changing conditions. - Double-check connections: Before using the boom pump, confirm that all connections and couplings are secure, preventing unexpected releases or detachment of equipment parts. - Position outriggers correctly: To increase stability, make sure to deploy boom pump outriggers on solid, level surfaces and follow the manufacturer's guidelines in terms of weight distribution and setup. - Secure loose items: Check for and secure any loose equipment, tools, or materials near the boom pump to avoid them becoming falling objects. - Follow a lifting plan: Adhere to a structured lifting plan when raising the boom sections to minimise the risk of accidents and maintain control throughout. - Monitor wind speed: Windy conditions may pose a threat to safe boom operation; therefore, continuously monitor wind speed and cease activity if it surpasses the manufacturer's recommended limit. - Conduct toolbox talks: Perform regular toolbox talks with the work crew to reinforce awareness of the hazards and control measures associated with operating a concrete boom pump. - Implement an emergency response plan: Have a well-rehearsed emergency response plan in place to quickly address any accidents or incidents that may occur during the boom pump setup process. - Regularly maintain equipment: Adhere to manufacturer-provided maintenance schedules and conduct necessary preventative checks to optimise safety and the lifespan of the boom pump.		
4. Operate boom pump	Struck by concrete, Sudden hose release	4A	[redacted]	2M

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
