Concrete Trowel Mechanised | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Concrete Trowel Mechanised

Business Name: [Company Name]		ABN: [ABN]	SWMS#
Business Address: [Company Address]			
Contact Person:	Phone: [Phone]	Email:	

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:

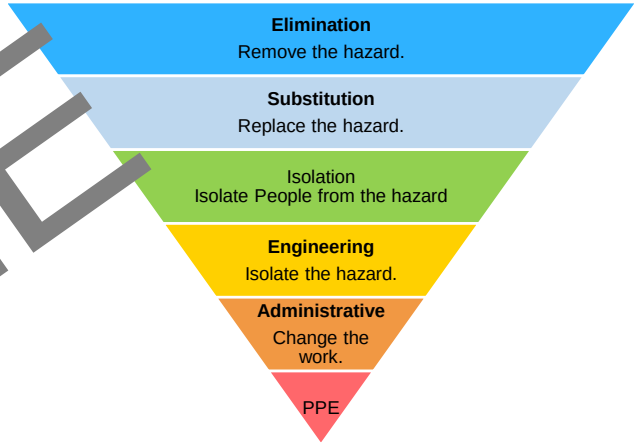
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip hazards, Overexertion	2M	- Regularly inspect the worksite to identify and remove any trip hazards such as tools, debris, or uneven surfaces. - Use safety cones, cord covers, or barrier tape to control trip hazards from material storage areas, equipment, and electrical cords when removing is not possible. - Ensure proper lighting in the work area to increase visibility of potential hazards for workers. - Provide training on correct lifting procedures for workers, including bending at the knees, keeping a straight back, and avoiding twisting while lifting heavy objects. - Ensure Mechanised Concrete Trowel equipment is regularly maintained and inspected for any defects that could lead to overexertion or accidents. - Encourage regular breaks for workers to avoid fatigue and overexertion. Implement rotation schedules if necessary to prevent repetitive strain injuries. - Provide ergonomically designed tools and equipment for workers to reduce strain and minimize the risk of overexertion. - Ensure appropriate personal protective equipment (PPE) is worn by workers, including non-slip footwear and gloves, to prevent slips, trips, and falls. - Implement a clear communication system among team members, including hand signals or verbal communication, to alert others of potential hazards or when assistance is required. - Store tools and materials in designated areas when not in use to maintain an organised workspace and reduce the likelihood of trip hazards. - Foster a culture of safety within the workplace, encouraging workers to report concerns, and regularly reviewing safe work practices. - Designate pathways and keep them free from obstructions to promote safe movement throughout the work area. - Assess the workload and allocate appropriate staffing levels to ensure tasks are completed efficiently without placing undue stress on workers, putting them at risk of overexertion.	1L	
2. Equipment Inspection	Malfunctioning equipment, Electrical hazards	3H	- Regular equipment inspection: Ensure that the trowel machine is inspected and maintained regularly by qualified personnel, following the manufacturer's guidelines and maintenance schedule. - Pre-start checks: Perform pre-start checks before using the equipment each day to identify any potential issues, such as worn or damaged parts, loose bolts, and proper fluid levels. - Electrical safety checks: Ensure that all electrical components, including cables, plugs, and switches, are in good working condition and free from visible damage.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Ground Fault Circuit Interrupter (GFCI): Use a GFCI for all electrical connections to prevent electrical shocks and reduce the risk of electrocution. - Safety controls: Equip the concrete trowel machine with appropriate safety controls, such as emergency stop buttons, guards and shields on moving parts, and lockout/tagout devices. - Training and competency: Ensure that all operators receive proper training and demonstrate competence in operating the trowel machine safely, including the ability to recognise and respond to potential hazards. - Clear and safe area: Maintain a clear, safe work area around the trowel machine, keeping cords and cables secured, fastened and away from water sources and high-traffic areas. - Personal Protective Equipment (PPE): Require that all workers wear appropriate PPE when operating or working near the trowel machine, including safety footwear, eye protection, gloves, and hearing protection if necessary. - Proper lifting techniques: Train workers in proper lifting techniques to prevent accidents and injuries related to the handling and transport of heavy equipment and materials. - Correct shutdown procedure: Implement a correct shutdown procedure at the end of each working day to ensure that the trowel machine is turned off, electrical connections are disconnected, and the equipment is stored safely.		
3. Site Layout	Uneven surfaces, Collisions with pedestrians or vehicles	2M	- Inspect and survey the site before commencing work to identify any uneven surfaces, obstructions or potential hazards that may cause accidents during the operation of the concrete trowel machine. - Establish a well-defined work area using appropriate barriers, signage, and traffic cones to prevent unauthorised access by pedestrians or vehicles. - Perform regular maintenance and checks on the concrete trowel machine to ensure it is in good working condition and can safely operate on uneven surfaces. - Educate all personnel involved in the project about the importance of maintaining a safe distance from the equipment while it is operating to avoid collisions with pedestrians, other workers, and vehicles. - Ensure that a designated spotter is present at all times who is responsible for monitoring the activities around the work area to prevent potential collisions between the equipment and pedestrians or vehicles. - Provide adequate lighting in the work area as necessary, especially during low-visibility conditions, to improve visibility and safety for both the operator and any individuals nearby. - Consider using high-visibility vests, hard hats, and other personal protective equipment (PPE) for all workers in the vicinity of the concrete trowel machine, to increase their visibility to the operator and others.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Develop and implement clear communication protocols among team members, including hand signals and radio communications, to ensure swift coordination, and fast decision-making in case of emergencies or unexpected changes in work conditions. - Establish a procedure for reporting and promptly addressing any issues related to uneven surfaces, obstructions, and other hazards that may be encountered during the operation of the concrete trowel machine. - Implement a regular schedule for site inspections and hazard reassessment to continuously identify, address, and monitor any new or existing risks associated with the use of mechanised concrete trowel machines. - Conduct periodic training sessions and refreshers on workplace health and safety practices relevant to the use and operation of concrete trowel machines, ensuring all workers are well-informed and up-to-date on proper procedures and safety measures.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us[illegible].	☐	☐	
Details of inspection checks required for any equipment listed ar[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
