

Connecting Meters | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Connecting Meters

Business Name:	ABN:	SWMS#
Business Address:		
Contact Person:	Phone:	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:
Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.		
Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Potential slips, trips and falls, incorrect handling	2M	<ul style="list-style-type: none"> - Ensure the work area is well-lit to enhance visibility and reduce the potential for slips, trips, and falls. - Keep the workspace tidy by removing any unnecessary equipment or debris that could cause tripping hazards. - Use non-slip mats or shoes designed to provide better grip on slippery surfaces. - Clearly mark any uneven surfaces or wet areas with warning signs or cones to alert workers. - Conduct a pre-work risk assessment to identify environmental factors that may increase slip and trip risks. - Train all personnel in manual handling techniques to ensure they lift and carry loads safely. - Utilize mechanical aids, such as trolleys or hoists, to transport heavy meters over long distances. - Limit load size and weight during transportation to what one person can manage comfortably without risking injury. - Position meters and related equipment ergonomically to avoid awkward postures and reduce strain. - Provide appropriate personal protective equipment (PPE), such as gloves and safety boots, to all workers. - Allocate sufficient time for meter connecting tasks to prevent rushing and associated mishandling. - Encourage workers to report any spills or obstructions immediately so they can be addressed promptly. 	1L
2. Transport meters to site	Vehicle collision, manual lifting injuries	3H	<ul style="list-style-type: none"> - Ensure all drivers have current and valid licences appropriate for the vehicle class. - Conduct a pre-start check on vehicles to ensure they are in good condition, including brakes, lights, tyres, and sensors. - Plan the route in advance to avoid areas with heavy traffic or known road hazards. - Use a spotter when reversing vehicles at the site or in congested areas to prevent collisions. - Load meters securely within the vehicle using proper restraints and position them to prevent movement during transit. - Adhere to vehicle load limits to ensure that weight is distributed evenly and does not exceed manufacturer's specifications. - Conduct manual handling training for workers to reduce the risk of lifting-related injuries. - Provide mechanical aids such as trolleys or dollies to assist with moving meters from the vehicle to their destination. - Implement a two-person lift rule for heavy or awkwardly shaped meters to minimise the risk of strain or injury. 	1L

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			<ul style="list-style-type: none"> - Wear appropriate personal protective equipment, such as steel-toed boots and gloves, when handling and transporting meters. - Develop and communicate an emergency procedure plan in case of accidents or breakdowns during transport. - Maintain constant communication between the transportation team and site personnel to coordinate safe delivery times and access points. 	
3. Site inspection	Electric shocks, exposure to hazardous materials	2M	<ul style="list-style-type: none"> - Conduct a pre-inspection briefing to ensure all workers understand the potential hazards and safety procedures. - Ensure only licensed electricians perform or supervise work involving electrical components. - Use appropriate personal protective equipment (PPE) such as insulated gloves, safety boots, and protective eyewear. - De-energise electrical circuits before commencing the site inspection to prevent electric shocks. - Utilize voltage detectors to verify that circuits are de-energised before starting work. - Clearly mark and inform workers of areas where there may be exposure to live electrical components. - Implement emergency response procedures, including having first aid kits and trained personnel available on-site. - Identify and correctly label materials suspected of being hazardous, such as asbestos, and ensure proper handling procedures are followed. - Provide training for workers on identifying and managing hazardous substances they may encounter. - Maintain a safe distance from overhead power lines and use warning signage to highlight their presence. - Regularly inspect tools and equipment for damage or defects and ensure they are adequately maintained. - Establish communication protocols for reporting any hazards or incidents observed during the inspection. 	1L

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review must be carried out in consultation with workers (including contractors and sub-contractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	<input checked="" type="checkbox"/>	
All relevant personnel consulted during the development of the SWMS.	<input checked="" type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input checked="" type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input checked="" type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input checked="" type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input checked="" type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input checked="" type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	<input checked="" type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input checked="" type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input checked="" type="checkbox"/>	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input checked="" type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input checked="" type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input checked="" type="checkbox"/>	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	<input checked="" type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input checked="" type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input checked="" type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input checked="" type="checkbox"/>
