JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Mishandling Equipment, Incorrect setup of equipment	2М	 Conduct a comprehensive equipment handling training programme for all staff members. Develop and enforce a protocol for proper exponent setup, aiming to minimise any risks associated with incorrect installation. Keep the workplace clean and organised, e organized to conveyor oven flat bed is located in a safe area away from crowded spectraffic lines. Provide safety manuals and structions for use othe conveyor oven flat bed. Regularly supervise staff memorys to ensure they as following them correctly. Regularly inspect to condition to be conveyor ovennat bed to identify any potential issues at could use a uniterest. Use appropring personal otective or including easily accessible fire extinguishers and fire allow its. Prohib staffingembers from operating the equipment if they're untrained, ill-nuippet or fatured. Do to control the conveyor oven flat bed. Adhere strictly to the manufacturer's ad limit. Issue regular preventative maintenance of the conveyor oven flat bed by trained processionals to keep it in good condition. Mark hazardous areas around the work site where the equipment is being used to prevent any unauthorised access. Regularly review and update the Safety Work Method Statements (SWMS) to capture any new hazards that may arise or changes in the operations or equipments. 	1L	
2. Operate Conveyor Oven Flat Bed	Operator Injury from moving parts, Fire hazard	ЗН	 Ensure all operators receive thorough, consistent training on the proper operation of the flat bed conveyor oven, safety procedures and hazard recognition and mitigation. Always use appropriate personal protective equipment (PPE) such as heat resistant gloves, face shield or safety glasses when running the machine. Establish routine inspections and maintenance for the conveyor oven to prevent any mechanical failures that might lead to operator injury or instigate fire hazards. Install safeguards on the oven to protect from moving parts, making sure they are properly designed and do not interfere with the operation of the machine Make certain that an accessible and functional fire extinguisher is always in proximity of the machine for early response in event of potential fire outbreak. Implement documented shut down and start-up procedures to minimize risk associated with sudden operational errors that could cause fire incidents. 	2M

SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			 Maintain cleanliness and ensure removal of combustible materials around the conveyor oven's vicinity to reduce initiation sources for fires. 		
			- Develop an emergency action plan, including clear, athways to exits and regular drills, to ensure all workers know what to do in the of fire or other emergencies.		
			- Monitor the workspace temperature to many sure it does the treach levels that could ignite a fire or affect personnel health and sale v.		
			- Encourage employees to report any unusual stands, smells, or malfunctions immediately so that potential tasks can be addres. I before the escalate into real hazards.		
			- Ensure all workers have complete manual become training, teaching them the correct lifting and moving trainingues operated strain injuries.		
			- Improvent a type perform of policy for heavy loads. This can help distribute the weigh a subsected y reduce the chances of injury.	RISK Image: Image of the second se	
			- Use come vanical vis, such as pallet jacks or trolleys, should be encouraged to help with hear Vifting.		
			ems of the first that might cause someone to slip, trip or fall should be removed be. The pading process begins.		
			Appropulse footwear with slip-resistant soles should be worn by all workers to vent slipping.		
3. Material Loading	Strain injury from lifting and hazards		- Establish clear walkways and ensure they are kept clear of any obstacles or potential hazards.	1L	
C C	from material		- Regularly inspect work area for any potential hazards, rectify if necessary.		
			- Make sure the work area is well-lit to see any possible safety risks.		
			- Create a procedure where load sizes are evaluated prior to moving to ensure safe handling.		
			- All material should be promptly loaded onto the conveyor and safely secured.		
			- Workers should stay clear of the conveyor while it's running and avoid placing limbs in between running conveyors.		
			- Always conduct proper risk assessment and planning prior to beginning any task to determine potential accident scenarios and solutions.		
			- Encourage an open communication culture where employees feel comfortable reporting safety concerns or potential issues with workflow.		
4. Machine Start-up	Injury from Initial kickback or start-up, Electrical shock	ЗH		2M

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAL WO A STHUD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to revised if necessary) if relevant control measure are revised if necessary) if relevant control measure are revised if necessary if relevant control measure are revised of the SWMS and their health and safety representatives who reworkplace.

ke sure it remains effective and must be reviewed (and are subcontractions) who may be affected by the operation sentatives who received that work group at the

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- 1. Spot Checks.
- Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.			
Names and signatures of all relevant personnel consulted during the development of the SWMS.		P	
Name, signature, position and date signed of the person approving the SWMS.			
Specific personnel and qualifications, experience is noted in the SWMS.	–		
Provides a step-by-step process of tasks required to carry out the activity or task.			
Adequate risk assessment of any identified hazards has been completed.			
Foreseeable hazards are identified and documented for each step.			
Any hazards listed in any site risk assessments have been added to the SWN			
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.			
Check control measures added to the SWMS are the most effecting sections.			
Responsible person is assigned and listed on the SWMS for the impement of continue measures.			
Permit requirements specified, such as Hot Wrock Electrical Work, Volume at Heights etc.			
SWMS identifies plant and equipment to be used.			
Details of inspection checks required for any equipment listed ar noted on the SWMS.			
Describes any mandatory qualifications, experience paining skills required to perform the work.			
Applicable personal protective equipment is selected on the SWMS.			
Lists any required permits or licenses.			
Reflects and documents any legislative references and/or Australian Standards.			
Identifies any hazardous substances used with specific control measures in line with any SDS.
