Create Controlled Fires For Site Clearance | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Create Controlled Fires For Site Clearance

Business Name:		ABN:	SWMS#
Business Address:			
Contact Person:	Phone:	Email:	

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THIS PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, assess risk to communicate those hazards and then to further take steps to either eliminate or control each hazard.	
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.	
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.	
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters	☐ is carried out on or near pressurised gas mains or piping
☐ is carried out on a telecommunication tower	☐ is carried out on or near chemical, fuel or refrigerant lines
☐ involves demolition of an element of a structure that is load-bearing	☐ is carried out on or near energised electrical installations or services
☐ involves demolition of an element related to the physical integrity of structures	☐ is carried out in an area that may have a contaminated or flammable atmosphere
☐ involves, or is likely to involve, disturbing asbestos	☐ involves tilt-up or precast concrete
☐ involves structural alteration or repair that requires temporary support to prevent collapse	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor
☐ is carried out in or near a confined space	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant
☐ is carried out in/near a shaft or trench deeper than 1.5 m or tunnel involving use of explosives	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEE
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review befo work starts.
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	nitor and ke records

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferr en co lling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the most e tive, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Prote ve quipm) is the least effective method.

Other PPE Required:

Permit or Licenses Requirements	Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Improper safety procedures, Unorganised working area	3H	- Conduct a thorough risk assessment prior to commencing any work to identify specific hazards related to the site and adjust control measures accordingly. - Ensure all personnel are adequately trained in fire safety procedures, including how to handle equipment safely and the proper use of personal protective equipment (PPE). - Establish a clear area around the fire site, free from flammable materials, and ensure that all equipment is organised and easily accessible. - Develop a comprehensive communication plan to coordinate between team members, including signals for emergency situations and progress updates. - Implement strict site access controls to prevent unauthorised personnel from entering the area during preparation and burning activities. - Verify all fire-starting equipment is in good working condition and is appropriate for the controlled burn. - Assign a competent person to supervise and maintain safety standards throughout the preparation phase, ensuring compliance with all workplace health and safety regulations. - Maintain an inventory of fire extinguishing equipment on site, regularly inspect it, and ensure that it is fully operational. - Prepare a clear and concise emergency response plan, making sure all workers are familiar with it and know their roles in case of an incident. - Conduct a briefing session with all personnel involved to review the steps of the task, potential hazards, and control measures to mitigate risks. - Arrange equipment and materials in a neat, organised manner to reduce tripping hazards and allow for safe and efficient movement around the site. - Schedule weather monitoring to be sure conditions are favourable and will not increase the risk of the uncontrolled spread of fire. - Set up clear signage to alert others in the vicinity about the ongoing activity and associated hazards, maintaining awareness even after working hours.	2M
2. Identify Area	Undetected hazardous materials, Unsafe environmental conditions	3H	- Conduct a comprehensive site assessment to identify any potential hazardous materials, such as asbestos or chemical residues. - Engage professionals to conduct environmental testing for hazardous airborne particles prior to commencement of work. - Implement air quality monitoring throughout the site clearance process to detect the presence of dangerous particulates. - Maintain communication with local environmental agencies to ensure compliance with regional safety regulations and guidelines.	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Arrange for an asbestos hazard inspection and removal by licensed asbestos contractors, if necessary. - Provide training for personnel on recognising signs of hazardous materials and appropriate response procedures. - Assess weather conditions regularly, particularly wind speed and direction, to ensure controlled burning does not spread unintentionally. - Develop an emergency response plan that includes procedures for dealing with exposure to hazardous substances. - Establish clear exclusion zones around the identified areas to protect workers from entering potentially unsafe conditions. - Ensure proper personal protective equipment (PPE) is worn at all times, including respiratory protection when working in areas with potential hazardous materials.	
3. Clear Full Area	Exposure to dust and debris, Strains and sprains from physical labour	2M	- Use personal protective equipment (PPE) such as dust masks, safety goggles, and gloves to protect against exposure to dust and debris. - Implement dust suppression methods, such as water spraying or the use of dust extractors, to minimise airborne dust. - Schedule regular breaks for workers to reduce fatigue and the risk of strains and sprains. - Ensure adequate training for all workers on proper lifting techniques and manual handling practices. - Assign tasks according to individual physical capabilities to prevent overexertion. - Use mechanical aids, such as trolleys or wheelbarrows, to transport heavy materials whenever possible. - Conduct a pre-work briefing to outline specific hazards and control measures related to dust exposure and physical exertion. - Maintain clear and organised workspaces to reduce tripping hazards and collisions that could occur during clearing activities. - Monitor weather conditions and cease operations if high winds increase the risk of excessive dust dispersion. - Establish designated rest areas with access to hydration facilities to support worker recovery and maintenance of energy levels. - Employ buddy systems to ensure workers have assistance when engaging in physically demanding tasks. - Regularly inspect all tools and equipment to ensure they are in good working order and appropriate for the task at hand. - Provide anti-fatigue mats for standing workstations to alleviate strain from prolonged standing. - Encourage warm-up exercises prior to engaging in physical labour to prepare muscles and joints and reduce injury risk.	1L
4. Arrange Resources	Incorrect or faulty equipment, Poor resource management	2M		1L

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	☒	
All relevant personnel consulted during the development of the SWMS.	☒	
Name, signature, position and date signed of the person approving the SWMS.	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☒	
Provides a step-by-step process of tasks required to carry out the activity or task.	☒	
Adequate risk assessment of any identified hazards has been completed.	☒	
Foreseeable hazards are identified and documented for each step.	☒	
Any hazards listed in any site risk assessments have been added to the SWMS.	☒	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	☒	
Check control measures added to the SWMS are the most effective solutions.	☒	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	☒	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	☒	
SWMS identifies plant and equipment to be used	☒	
Details of inspection checks required for any equipment listed are noted on the SWMS.	☒	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	☒	
Applicable personal protective equipment is selected on the SWMS.	☒	
Reflects and documents any legislative references and/or Australian Standards.	☒	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☒
