Deep Fryer | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Deep Fryer

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

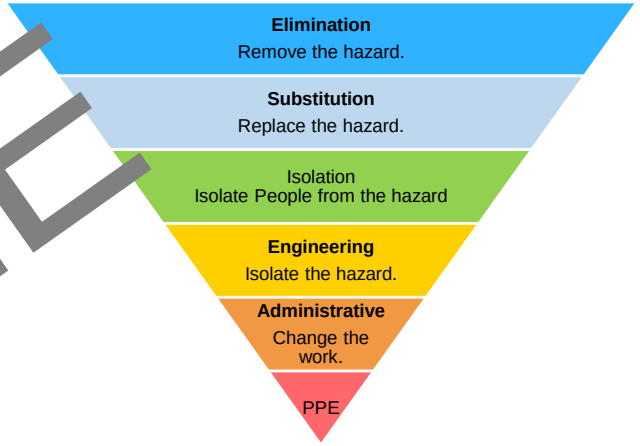
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Slips and trips, manual handling injuries	2M	- Proper housekeeping: Ensure that the work area is clean and free from clutter, spills, and obstructions to prevent slips and trips. - Non-slip mats: Install non-slip mats or flooring around the fryer area to minimise slipping risks due to oil spills. - Effective lighting: Provide adequate lighting in the workspace to increase visibility and identify potential hazards quickly. - Proper training: Ensure that staff members are well-trained in safe work practices when handling deep fryers, including correct lifting techniques to avoid manual handling injuries. - Safe footwear: Require workers to wear appropriate footwear with slip-resistant soles, reducing the risk of slips and falls. - Designated routes: Clearly mark designated walking paths and keep them free from obstacles to avoid tripping hazards. - Ergonomic equipment: Utilise ergonomic equipment such as height-adjustable deep fryers and proper lifting aids to minimise strains and injuries during manual handling tasks. - Regular maintenance: Regularly inspect deep fryers for any issues or damage, ensuring they are in good working condition and safe to use. - Signage: Post clear and visible safety signs around the work area to remind employees of potential hazards and safety guidelines related to using the deep fryer. - Spillage cleanup plan: Develop a spillage response plan detailing how to safely handle and clean up oil or food spills to minimise slip hazards. - Pre-shift safety checks: Implement routine safety inspections before each work shift to identify and address any potential hazards or concerns. - Safe lifting techniques: Train workers in correct lifting techniques, such as bending the knees and keeping the back straight, to reduce the risk of injury while manually handling heavy items or moving the fryer. - Incident reporting: Establish a formal system for reporting slips, trips, and falls or other workplace incidents, ensuring all accidents are investigated and addressed promptly to prevent future occurrences.	1L	
2. Equipment Inspection	Electrical hazards, equipment failure	2M	- Regular maintenance checks: Schedule routine inspections for the deep fryer to ensure that all components are functioning properly and up to industry standards. This will help prevent equipment failure and reduce electrical hazards. - Professional equipment servicing: Hire certified technicians to carry out maintenance, repairs, and installations of the deep fryer. This ensures that the equipment is handled by professionals who are aware of the safety guidelines and adhere to them strictly.	1L

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Staff training: Ensure all workers using the deep fryer are adequately trained on how to safely use and maintain the equipment. This reduces the risk of accidents caused by mishandling or insufficient knowledge about the equipment. - Electrical safety checks: Prior to each use, workers should visually inspect the deep fryer's power cords, plugs, and connections for any visible damage or wear. If any issues are identified, immediately tag the equipment as unusable and report it to management for further assessment. - Use of personal protective equipment (PPE): Staff must always wear appropriate PPE, such as heat-resistant gloves, aprons, and eye protection when working with the deep fryer. This will help protect workers from burns, injuries, and accidents caused by hazardous conditions. - Emergency shut-off switch installation: Install an accessible emergency shut-off switch for the deep fryer that allows users to instantly turn off the power supply in case of any emergencies or equipment failure. - Proper storage and handling of electrical cords: Keep power cords safe from damage by storing them on hooks or storing in a designated area when not in use. Avoid placing the cords near water sources, sharp edges, or extreme heat to minimize the risk of electrical hazards. - Area decluttering and cleanliness: Clear the work area surrounding the deep fryer of any unnecessary items, including cardboard boxes, paper products, and other flammable materials. This will help reduce the risk of fire-related incidents and create a safer working environment. - Monitoring and enforcing safe work protocols: Regularly communicate with staff to ensure they are following established safety guidelines when using the deep fryer. Encourage workers to report any concerns or suggestions for improving workplace health and safety in relation to the equipment. - Updating risk assessments and documentation: Periodically review and update Safe Work Method Statements (SWMS) to account for any new potential hazards, equipment updates, or changes in workplace practices. This helps maintain a proactive approach to mitigating risks associated with equipment inspection and usage.		
3. Power Connection	Electrical shock, improper grounding	3H	- Ensure that all electrical equipment, including the deep fryer, has been tested and tagged by a certified electrician before use. - Verify that the power outlet being used is appropriate for the electrical requirements of the deep fryer, as indicated in the manufacturer's instructions. - Inspect the electrical cord for any signs of damage or wear before connecting it to the power outlet. Replace damaged cords immediately. - Place the power cord in a position that does not create a tripping hazard or cause tension on the connection points. - Utilise ground-fault circuit interrupter (GFCI) outlets to minimise the risk of electrical shock in case of a short circuit.	2M

SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Ensure proper grounding by connecting the deep fryer's ground wire to an approved earth electrode system, as per AS/NZS 3000 standard requirements. - Train staff on the correct procedures for connecting and disconnecting the deep fryer from the power supply, emphasising the importance of not touching any wires or connections with wet hands. - Keep the area around the deep fryer clean and free of water or liquids which might cause electrical hazards. - Implement lockout/tagout procedures while performing maintenance or repairs on electrical systems, to ensure no accidental activation occurs during work. - Establish an emergency plan, detailing the immediate actions to be taken in the event of an electrical shock incident, including first aid and rescue steps, notifying appropriate authorities, and investigating the incident. - Regularly monitor and audit work practices to ensure adherence to safety protocols and identify opportunities for continuous improvement. - Encourage open communication among staff about any observed hazards or near-miss incidents related to electrical risks, and promptly address these concerns through appropriate corrective measures. - Maintain up-to-date documentation on relevant safety data sheets and operating instructions for the deep fryer, ensuring they are accessible to all staff members involved in the process.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
