Delivery And Installation Of Large Sculptures | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Delivery And Installation Of Large Sculptures

Business Name:		ABN:	SWMS#
Business Address:			
Contact Person:	Phone:	Email:	

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THIS PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, assess risk to communicate those hazards and then to further take steps to either eliminate or control each hazard.	
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.	
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.	
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters	☐ is carried out on or near pressurised gas mains or piping
☐ is carried out on a telecommunication tower	☐ is carried out on or near chemical, fuel or refrigerant lines
☐ involves demolition of an element of a structure that is load-bearing	☐ is carried out on or near energised electrical installations or services
☐ involves demolition of an element related to the physical integrity of structures	☐ is carried out in an area that may have a contaminated or flammable atmosphere
☐ involves, or is likely to involve, disturbing asbestos	☐ involves tilt-up or precast concrete
☐ involves structural alteration or repair that requires temporary support to prevent collapse	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor
☐ is carried out in or near a confined space	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant
☐ is carried out in/near a shaft or trench deeper than 1.5 m or tunnel involving use of explosives	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEE
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review befo work starts.
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	nitor and ke records

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferr en co lling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the most e tive, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Prote ve quipm) is the least effective method.

Other PPE Required:

Permit or Licenses Requirements	Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Unsupported Sculpture, Tripping Over Tools	3H	- Conduct a pre-work safety briefing to inform all team members about the specific hazards associated with handling large sculptures. - Implement clear signage and barriers around the work area to highlight dangers of tripping and alert others to keep the area clear. - Ensure that the sculpture is supported at all times during preparation by using sturdy braces or supports designed for heavy objects. - Maintain a tidy workspace by organising tools and materials in designated storage areas when not in use, to minimise the risk of tripping. - Provide all workers with personal protective equipment (PPE) such as steel-toe boots, gloves, and helmets to protect against potential impacts. - Use brightly coloured tape or markers to clearly indicate any step offs, uneven surfaces, or other tripping hazards in the preparation area. - Deliver regular training sessions on the safe handling and movement of large sculptures, including lifting techniques and the use of mechanical aids. - Conduct routine checks on all equipment and supports used for stabilising the sculpture, ensuring they are in good condition and properly installed. - Establish clear communication protocols among team members, using radios or hand signals, especially when moving or adjusting heavy items. - Develop an emergency response plan specifically tailored for incidents involving large sculptures, including injuries or equipment failure. - Limit access to the preparation area strictly to personnel who are directly involved in the installation process, to avoid unnecessary traffic and reduce tripping hazards.	2M
2. Pre-Delivery Inspection	Injury from Inspecting Heavy Sculpture, Allergic Reactions to Materials	2M	- Conduct a comprehensive risk assessment before any inspection activity to identify potential hazards associated with the sculptures. - Ensure that all inspectors are trained on manual handling techniques specifically tailored for dealing with heavy objects. - Use mechanical aids such as forklifts, hoists, or cranes whenever possible to minimise direct contact with the sculptures during inspection. - Provide personal protective equipment (PPE) such as gloves, safety boots, and helmets to all personnel involved in the inspection process. - Implement a buddy system where no one inspects heavy sculptures alone, ensuring assistance is available if an emergency arises. - Develop clear guidelines on how to interact with materials that could cause allergic reactions, including the use of appropriate PPE like gloves or respiratory masks.	1L

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Maintain a clean and organised inspection area to reduce the risk of accidents and exposure to harmful substances. - Offer regular health screenings and allergy tests for employees who frequently handle diverse materials. - Keep Material Safety Data Sheets (MSDS) accessible at the inspection site to provide information on handling emergencies related to allergic reactions or exposure to hazardous materials. - Establish emergency procedures and conduct regular drills to prepare staff for potential incidents during sculpture inspection. - Limit the time spent directly handling or being in close contact with the sculptures to reduce exposure to potential allergens. - Provide adequate ventilation in the inspection area to dissipate any airborne particles from the materials used in the sculptures.	
3. Loading Sculpture onto transport vehicle	Crush Injuries, Slips and falls while loading, Manual handling injuries	4A	- Conduct a pre-work briefing to ensure all involved personnel understand the specific tasks, associated risks, and control measures. - Implement a buddy system where team members work in pairs to monitor and assist each other during the loading process. - Use mechanical aids such as forklifts, cranes, or hoists to manage the weight of the sculpture, minimizing manual handling. - Install anti-slip matting at the loading area to reduce the risk of slips and falls, especially in wet or slippery conditions. - Ensure that all workers wear appropriate personal protective equipment (PPE), including steel-capped boots, gloves, and high visibility clothing. - Train all workers in proper lifting techniques to prevent manual handling injuries. - Secure the load using straps, chains, or other appropriate securing devices to prevent movement during transportation. - Position spotters on both sides of the sculpture during the loading process to guide and alert drivers or operators of any hazards. - Conduct regular maintenance checks on all equipment used during loading to ensure they are safe and functional. - Set up barriers or exclusion zones around the loading area to keep unauthorized persons away from the site. - Provide sufficient lighting around the loading area to ensure clear visibility during early morning or late evening operations. - Develop an emergency response plan specifically for incidents that could occur during the loading process, such as equipment failure or sudden adverse weather conditions. - Keep all pathways and areas around the vehicle clear of obstacles and debris to provide secure footing and easy access.	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Regularly review and update the SWMS to reflect any changes in work practices, feedback from staff, or after an incident to continuously improve safety.	
4. Transport of Sculpture	Road Accidents, Unsecured load moving during transit	3H	[redacted]	2M
5. Site Assessment	Uneven or unsafe terrain, Public traffic	2M	[redacted]	1L

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	☒	
All relevant personnel consulted during the development of the SWMS.	☒	
Name, signature, position and date signed of the person approving the SWMS.	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☒	
Provides a step-by-step process of tasks required to carry out the activity or task.	☒	
Adequate risk assessment of any identified hazards has been completed.	☒	
Foreseeable hazards are identified and documented for each step.	☒	
Any hazards listed in any site risk assessments have been added to the SWMS.	☒	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	☒	
Check control measures added to the SWMS are the most effective solutions.	☒	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	☒	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	☒	
SWMS identifies plant and equipment to be used	☒	
Details of inspection checks required for any equipment listed are noted on the SWMS.	☒	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	☒	
Applicable personal protective equipment is selected on the SWMS.	☒	
Reflects and documents any legislative references and/or Australian Standards.	☒	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☒
