THIS SAFE WORK METHOD	STATEMENT IS APPROVED BY	THE PC. OF THE ROJECT	
Under the Work Health and Safety Regulation (WHS Regulation), a person conductive proposed work starts.	cting a business or und	required to el ethat a safe work method	statement (SWMS) is prepared before
Full Name:			
Signature:	NY	Title:	Date:
Details of the person(s) responsible for ensuring implementation, monitoring	compliant a of the SWIL as well as re	eviews and modifications of the SWMS.	
Full Name:		Title:	Phone:
ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS VMS HAVE THE FOLLOWING COMMUNICATED	NA. 2 OF ALL RELEVANT PERSONN EVELOPMENT AND APPROVAL OF	NEL WHO HAVE BEEN CONSULTED AND F THIS SWMS	COMMUNICATED TO IN THE
Safety meetings or toolbox talks will be sched ed in account with regislative requirements to first identify any site hazards, to compute the those hazards and then to further take steps to either eliminate or con leach hazard.			
If an incident or a near miss occurs, all work must standardly. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Dust inhalation, eye contact with dust particles	3H	- Conduct a risk assessment to identify portural sources of dust and particles specific to the work site. - Implement adequate ventilation systems, and as to an exhaust ventilation, to reduce airborne dust levels. - Use water suppression monods where applicate a to minit as dust generation at the source. - Designate specific areas for tasks that generate a maint dust and ensure these are isolated from general work area. - Provide permual protectin equipment (PPF auch as appropriate masks or respirators, fitted correctly for workers in alved in dust tasks. - Reconsult wooms andergo training on appropriate PPE use and maintenance. - Estate is a rotocco for regular cleaning schedules using vacuum systems with HEPA filters instead of sweeping. - Arrange for regular and monitoring to measure dust levels and adjust controls as needed. - But the rewards stations are installed nearby, and provide safety goggles to prevent eye contact with dust positives. - communicate daily working conditions, including forecasted weather changes that might exacerbate dust dispersion. - Post signage in areas where dust and particle risks exist to remind workers of required PPE and procedures. - Develop and enforce site rules that prohibit certain activities that could increase dust exposure, such as smoking in work areas.	2M
2. Protective Equipment Fitting	Misuse of equipment, dust leakage inside mask	3Н	 Conduct thorough training on the proper use and fitting of protective equipment, ensuring that all workers understand how to use it correctly. Use only certified and approved respiratory protection gear suitable for the type of dust or particles present. Perform a fit test for each worker using respirators to ensure a secure seal and prevent dust leakage. Regularly inspect respiratory protective equipment for any damage or wear and replace components as necessary. Ensure that facial hair does not compromise the seal of the mask to prevent dust infiltration. Provide a variety of mask sizes and types to accommodate different face shapes and sizes for a proper fit. Implement a buddy system where workers check each other's equipment fit and seals before commencing work. 	1L

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Educate workers on the importance of maintaining the integrity of the mask seal by avoiding adjustments while in dusty areas.	
			- Supply appropriate storage for masks when not use to prevent contamination and maintain their condition.	
			- Schedule regular breaks to remove mask afely and raide an opportunity for inspection and cleaning.	
			- Reinforce the importance of conducting pro-securecks to identify any defects in equipment prior to starting work.	
			- Monitor environmental condons regularly to deconine in our or less stringent protective measures are needed.	
			- Maintain recomment train, fit tering, and maintenance activities to ensure compliance and traceability.	
			- Implement de suppression technique like water spraying during material handling to minimise airbo article	
			- Ensured represent during dusty operations to limit exposure.	
			- Use por side parriers at temporary enclosures around the work area to contain dust emissions.	
			shed to active a during weather conditions that are less likely to exacerbate dust spread, such as low wine fay.	
			Employ chanical ventilation systems or fans to disperse and direct dust away from work areas and sonnel zones.	
			- Designate a specific area for unloading and handling dusty materials to prevent accidental dust clouds from spreading across the site.	
3. Site Setup	Deploying dusty dust cloud creation terials, accidental	3H	- Provide adequate training for workers on safe handling procedures and the importance of minimising dust creation.	2M
			- Utilise drop sheets or tarpaulins to cover dusty materials during transportation within the site.	
			- Install dust extraction systems on tools and machinery known to generate high levels of dust.	
			- Conduct regular inspections and maintenance of equipment to ensure they are functioning efficiently and not contributing to excessive dust production.	
			- Establish clear communication protocols to alert workers immediately in case of accidental dust cloud formation so that controls can be quickly enforced.	
			- Equip workers with appropriate personal protective equipment (PPE) such as P2 masks or respirators when working in high-risk areas.	
			- Implement an ongoing monitoring program to measure dust levels at the site and adjust control measures accordingly to maintain compliance with safety standards.	
4. Work Commencement	Direct exposure to dust, accidental dust ingestion or inhalation	3H		1L

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK IN 'THIS 'S' ITEM ON MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remain effect, and must be reviewed (and revised if necessary) if relevant control measures are revised. The view should be carried out in consultation with workers (including contractors as an intractors of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBD mest ensure the advised that a revision has been made and how they can accept the revised SWMS, including all persons who will need to change a work procedure or system as a remotified the review are advised of the changes in a way that will enable them to implement their duties the thing with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- Spot Checks.
- Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.		
All relevant personnel consulted during the development of the SWMS.		
Name, signature, position and date signed of the person approving the SWMS.		
Specific personnel and qualifications, experience is noted in the SWMS.	7	
Provides a step-by-step process of tasks required to carry out the activity or task.		
Adequate risk assessment of any identified hazards has been completed.	\boxtimes	
Foreseeable hazards are identified and documented for each step.		
Any hazards listed in any site risk assessments have been added to the SV. 5.		
SWMS initial risk (IR) column as well as residual risk (RR) column ampleted.		
Check control measures added to the SWMS are the most effective sections.		
Responsible person is assigned and listed on the high centary of control measures.		
Permit or licenses requirements specified, so in as Hot Work, Electrical Work, Work at Heights etc.		
SWMS identifies plant and equipment to be		
Details of inspection checks required for any equipment lister are noted on the SWMS.		
Describes any mandatory qualifications, experience, ang or skills required to perform the work.		
Applicable personal protective equipment is selected on the SWMS.		
Reflects and documents any legislative references and/or Australian Standards.		
Identifies any hazardous substances used with specific control measures in line with any SDS.	\boxtimes
