THIS SAFE WORK METHOD	STATEMENT IS APPROVED BY	THE PL OF THE PROJECT						
Under the Work Health and Safety Regulation (WHS Regulation), a person conductive proposed work starts.	icting a business or undertaking (H BU) is	required to ture at a safe work method s	tatement (SWMS) is prepared before					
Full Name:								
Signature:		Title:	Date:					
Details of the person(s) responsible for ensuring implementation, monitoring arth compliance of the SWMS, well as reviews and modifications of the SWMS.								
Full Name:		Title:	Phone:					
ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS WMS. ST HAVE THE FOLLOWING COMMUNICATED	N. TE AND DATED SIGNATURE OF A CO. MUNICATED TO IN THE DEVELO	LL RELEVANT PERSONNEL WHO HAVE B OPMENT AND APPROVAL OF THIS SWMS	EEN CONSULTED AND					
Safety meetings or toolbox talks will be sched ed in accordance with regislative requirements to first identify any site hazards, conditioned in incast those hazards and then to further take steps to either accurate or control ea, chazard.	NAME	SIGNATURE	DATE					
If an incident or a near miss occurs, all work must study unately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.								
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.								
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip hazards, Manual handling injuries	2М	 Conduct a pre-work inspection to identify and remove potential trip hazards like cables, tools, and debris around the work area. Clearly mark designated walkways and patheterminimise the risk of tripping over equipment or debris. Use warning signs and barriers to inform waters around stors about potential hazards in the area, especially where cables a submitted store walkways. Ensure proper lighting in the work area to increase wisibility appotential trip hazards. Implement a 'clear use ango' puty within the workspace to maintain a clutter-free environment activeduce trunsks. Provide appropriate Personal Proteo and patheters during the preparation stage. Trainent poyees to proper lifting techniques and manual handling best practices to avoid back, tack, and shoulder injuries. Utilise tring of carry g aids like trolleys and wheelbarrows to transport heavy trys and reduce manual handling injuries. Encortae teamwork and communication among workers when carrying out tasks at requese coordination, like moving large equipment together, to avoid any sudden unsafe movements. Regularly review and update standard operating procedures (SOPs) for work tasks to ensure they remain up-to-date with industry best practices regarding safety and ergonomics. Foster a culture of safety by encouraging workers to report possible hazards or incidents, and take timely action to resolve them. Conduct regular toolbox talks and worker training sessions to raise awareness about workplace health and safety, specifically focusing on the importance of hazard identification and prevention during the preparation stage. 	1L	
2. Transporting system	Collision, Back strain	2M	 Regularly inspect and maintain the dust extractor mobile equipment, ensuring that its wheels or casters are functioning correctly for seamless transportation. Designate specific pathways for transporting the dust extractor system to minimise the risk of collision with other objects or personnel. Provide adequate lighting in the area where the dust extractor mobile will be transported to ensure clear visibility for the operator. Conduct a toolbox talk at the start of each shift to brief the team on proper handling techniques and safe practices when transporting the dust extractor mobile system. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Use warning signs or delineate the work zone to inform others of the ongoing activity and prevent them from inadvertently entering the hazardous area.		
			- When selecting an operator for transporting the convextractor mobile system, ensure they are physically capable and have recoved proper training to minimise the risk of back strain or injury.		
			- Encourage the use of appropriate personal entective equipment (PPE) such as safety boots, gloves, and high-visibility vests to be the risk of injuries during the transportation process.		
			- Implement a buddy system when necessary, required the or more workers to collaborate during the sport, a cess to share the sub, effectively reducing the risk of back strained injunction to verexertion.		
			- Establish a symmunicatic porotocol, hope an members using hand signals or verbal, ues to shance or adination as esticiency during the transportation proce		
			- Set a point limit outransporting the dust extractor mobile system to minimise the chance of using collimit and causing collisions or accidents.		
			a otter need, to guide and direct them safely through tricky areas during trans, rta pn.		
			Enforce segular breaks or rotation of duties among operators to prevent fatigue or so in accumulation while performing the task, thereby reducing the potential for miscaps or injuries.		
	G		 Conduct a pre-start safety briefing with all workers involved in the assembly process, addressing potential hazards and safe work practices for assembling the dust extractor mobile unit. 		
			- Provide proper training on the proper handling and safe operating procedures for assembling the dust extractor mobile unit to all workers involved.		
3. Assembling unit	Pinch points, Folling philosts	2M	- Ensure that only trained and authorised personnel are allowed to assemble the dust extractor mobile unit.	1L	
5. Assembling unit Finch points, Falling obj	Pinch points, Falling objects	ZIVI	 Use appropriate personal protective equipment (PPE) while assembling the unit, including gloves, safety glasses, and steel-toed boots or shoes to protect from pinch points and falling objects. 		
			- Inspect tools and equipment used for assembling the unit for any defects, ensuring they are in good condition and fit for use.		
			- Follow the manufacturer's recommendations and guidelines for assembling the dust extractor mobile unit, including correct placement of components and use of applicable hardware.		

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			 Ensure clear communication between team members during the assembly process using standard hand signals, radios, or other communication devices when applicable. Establish and maintain minimum safe distance from pinch points and falling object hazards for workers not directly involved in the assembly process. Implement proper housekeeping measures cound the work area to prevent tripping or slipping hazards that could contribute realing objects or pinch point injuries. Securely fasten all component and fittings to avoc partnerslodging or falling during use, following measures' guidelines. When lifting the locing here's continue to assembly, utilise proper lifting techniques are mechanicated such as here or forklifts to reduce the risk of injury from pitch point or dropted items. Routed inspective work area throughout the assembly process, ensuring that no new here are the nard control measures are continually adhered to. Emple locing triagon procedures when necessary to eliminate any unexpected movement of environment or parts during assembly. Conduct final hyspection of the assembled dust extractor mobile unit, ensuring all component are securely fastened and in compliance with manufacturer guidelines fore us. 		
4. Pre-use inspection	Electric shock, Dust inhalation	2М		1L

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAF WC A STHUD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to review the sure it remains revised if necessary) if relevant control measure are a conconsultation with workers (including contractors are subcontract of the SWMS and their health and safety representatives who re workplace.

ke sure it remains effective and must be reviewed (and acception of the process should be carried out in s any subcontract s) who may be affected by the operation esentatives who recented that work group at the

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- 1. Spot Checks.
- 2. Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.			
Names and signatures of all relevant personnel consulted during the development of the SWMS.		P	
Name, signature, position and date signed of the person approving the SWMS.			
Specific personnel and qualifications, experience is noted in the SWMS.			
Provides a step-by-step process of tasks required to carry out the activity or task.			
Adequate risk assessment of any identified hazards has been completed.			
Foreseeable hazards are identified and documented for each step.			
Any hazards listed in any site risk assessments have been added to the SWN			
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.			
Check control measures added to the SWMS are the most effecting sections.			
Responsible person is assigned and listed on the SWMS for the imement of cont, measures.			
Permit requirements specified, such as Hot Wey, Electrical Work, Verat Heights etc.			
SWMS identifies plant and equipment to be up t.			
Details of inspection checks required for any equipment listed approved on the SWMS.			
Describes any mandatory qualifications, experience vaining skills required to perform the work.			
Applicable personal protective equipment is selected on the SWMS.			
Lists any required permits or licenses.			
Reflects and documents any legislative references and/or Australian Standards.			
Identifies any hazardous substances used with specific control measures in line with any SDS.
