EWP Boom Cherry Picker Scissor Lift | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: EWP Boom Cherry Picker Scissor Lift

Business Name:	ABN:	SWMS#
Business Address:		
Contact Person:	Phone:	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THIS PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, assess risk to communicate those hazards and then to further take steps to either eliminate or control each hazard.	
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.	
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.	
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters	☐ is carried out on or near pressurised gas mains or piping
☐ is carried out on a telecommunication tower	☐ is carried out on or near chemical, fuel or refrigerant lines
☐ involves demolition of an element of a structure that is load-bearing	☐ is carried out on or near energised electrical installations or services
☐ involves demolition of an element related to the physical integrity of structures	☐ is carried out in an area that may have a contaminated or flammable atmosphere
☐ involves, or is likely to involve, disturbing asbestos	☐ involves tilt-up or precast concrete
☐ involves structural alteration or repair that requires temporary support to prevent collapse	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor
☐ is carried out in or near a confined space	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant
☐ is carried out in/near a shaft or trench deeper than 1.5 m or tunnel involving use of explosives	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

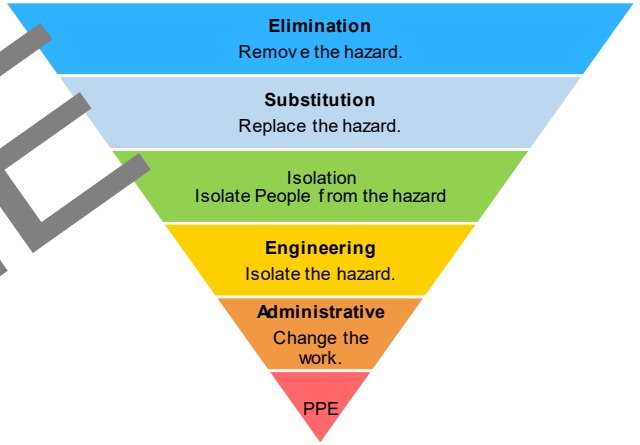
ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEE
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review befo work starts.
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	nitor and ke records

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferr en co lling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the most e tive, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Prote ve quipm) is the least effective method.

HEIRARCHY OF CONTROLS



PERS NAL P TECTIVE EQUIPMENT (PPE)

Select the appropriate PPE abo suitable for the equipment used or the job task being performed (if applicable).

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EY PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED

Other PPE Required:

Permit or Licenses Requirements	Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Incorrect equipment selection, Lack of hazard assessment	3H	- Ensure all equipment is selected according to the specific requirements of the job and the site conditions by conducting a pre-work inspection. - Train all operators on the proper selection and use of different types of EWP machinery, focusing specifically on the differences between boom lifts, cherry pickers, and scissor lifts. - Review manufacturer's guidelines and limitations for each piece of equipment to ensure appropriate selection. - Conduct a comprehensive hazard assessment before beginning any work. The assessment should identify potential risks related to the operation of EWPs on the specific job site. - Develop a job safety analysis (JSA) that includes identifying potentially hazardous areas, such as overhead cables, uneven ground, or confined spaces. - Consult with experienced personnel or external safety consultants if unsure about the appropriate type of EWP for the intended tasks. - Clearly define the scope of work prior to the commencement of operations, adjusting equipment choices as necessary based on the complexity or specifics of the task. - Utilise a checklist to confirm that all equipment specifications meet the task's demands and ensure no critical considerations are overlooked. - Organise a pre-start meeting with all involved staff to discuss the planned activities, the equipment selected, associated hazards, and the mitigating measures to be implemented. - Incorporate feedback from operators who have previous experience in similar tasks and environments to refine equipment selection and hazard assessments. - Keep an up-to-date inventory and maintenance records of all accessible EWPs to verify their suitability and safety status before they are employed for any tasks. - Ensure that contingency plans and emergency procedures are established and understood by all team members in case the selected equipment fails or proves unsuitable during operation.	2M
2. Set-up area	Uneven ground, Overhead obstacles	3H	- Conduct a pre-operation site survey to identify and mark all uneven ground areas. - Use ground compaction or leveling techniques where possible to stabilise the surface. - Place visible warning signs around areas with identified hazards, such as uneven grounds and overhead obstacles. - Implement exclusion zones to keep unauthorised personnel away from the operation area. - Use stabilisation pads or outriggers on the EWP to ensure that the equipment remains stable while in use. - Regularly inspect the work area for changes in conditions that may affect the stability of the EWP.	1L

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Train operators and ground personnel on recognising and responding to risks associated with uneven surfaces and overhead obstacles. - Ensure that the EWP is equipped with appropriate sensors or alarms to detect proximity to overhead obstacles. - Brief all team members on emergency procedures and evacuation routes in case the EWP encounters instability. - Maintain clear communication between the operator and spotters to manage the movement around and under overhead obstacles. - Limit the operation of the EWP to daylight hours or ensure adequate lighting is available when working after dark. - Plan routes meticulously to avoid low hanging branches, powerlines, and other overhead obstructions. - Document all identified hazards and control measures, and review them in team meetings before commencing work. - Establish regular monitoring intervals to reassess the work area and adjust controls as necessary throughout the operation.	
3. Equipment check	Malfunctioning equipment, Expired certifications	3H	- Ensure all operators have received appropriate training on how to inspect and operate the specific EWP equipment being used. - Conduct a pre-start check prior to each use of the equipment, following manufacturer's guidelines and checklist. - Verify that all safety decals and warning labels are intact and clearly visible on the equipment. - Check that all control mechanisms are functioning correctly without any irregularities or signs of wear. - Inspect safety devices such as emergency stop buttons, tilt sensors, and outriggers to ensure operational integrity. - Confirm that both visual and audio warning systems are working properly. - Ensure the EWP has its latest certification sticker displayed which confirms it has passed the necessary statutory inspections. - Keep a logbook for each piece of equipment recording all maintenance, inspections, and incidents to monitor its history and condition. - Examine hydraulic, pneumatic, and electrical systems for leaks, frays, or damage. - Regularly update all inspection and certification records compliant with the WHS regulations. - Implement a tag-out or lock-out system for EWPs that do not pass the pre-use inspection or are due for maintenance. - Provide accessible emergency descent controls and instruct workers on their location and use. - Ensure ground conditions are checked for stability and suitability before positioning and deploying the EWP.	1L

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	☒	
All relevant personnel consulted during the development of the SWMS.	☒	
Name, signature, position and date signed of the person approving the SWMS.	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☒	
Provides a step-by-step process of tasks required to carry out the activity or task.	☒	
Adequate risk assessment of any identified hazards has been completed.	☒	
Foreseeable hazards are identified and documented for each step.	☒	
Any hazards listed in any site risk assessments have been added to the SWMS.	☒	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	☒	
Check control measures added to the SWMS are the most effective solutions.	☒	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	☒	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	☒	
SWMS identifies plant and equipment to be used	☒	
Details of inspection checks required for any equipment listed are noted on the SWMS.	☒	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	☒	
Applicable personal protective equipment is selected on the SWMS.	☒	
Reflects and documents any legislative references and/or Australian Standards.	☒	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☒
